

Rodime pulls off \$50m deal

by John Riley
SCOTTISH company Rodime, the world's leading 3 1/2 inch Winchester disc drive manufacturer, last week announced a \$50 million deal with US micro-maker Televideo.

The contract, to supply Televideo with its range of 3 1/2 inch and 5 1/4 inch hard disc drives, follows hard on the heels of a recent multi-million pound order for 3 1/2 inch drives from another US micro manufacturer, Compaq.

Malcolm Dudson, Rodime director of marketing, says: "Almost more significant than the size of the contract is that Rodime is supplying Televideo with a family of drives right across the spectrum." The contract covers Rodime's 42 Mbyte RO 208 5 1/4 inch drives through to its 10 Mbyte RO 252 3 1/2 inch drives.

Dudson confirms that production of drives for the US will be transferred to the company's new factory at Boca Raton, Florida, which is expected to come on-stream in the second quarter of this year.

Hewlett-Packard opens French line

by Jack Gee
HEWLETT-PACKARD will become France's leading microcomputer manufacturer this year, thanks to the opening of a production line for the HP150 model, according to Kleber Beauvillain, president of Hewlett-Packard France.

Deliveries from the company's factory at Grenoble, in the French Alps, will begin in February and the touch-screen units will be shipped to all parts of Europe.

"We are going to be France's top manufacturer of microcomputers and its biggest exporter," says Beauvillain. "The HP150 will make a major contribution to France's exports efforts. It will help improve the balance of payments problem in micro-electronics."

Hewlett-Packard's product range in France covers personal computers, networks and terminals. "We shall be selling more and more of our products, (except for the HP150), to the United States. The American market has a lot to offer the French micro-electronics industry," says Beauvillain.

For fiscal year 1983, ending October 31, Hewlett-Packard France exported 36% of its turnover (FFr 855 million out of a total of FFr 2395 million) while importing 44% of its turnover.

This year the French subsidiary's target is to raise its 50% of turnover. Beauvillain says a special effort is being made in the field of investment, FFr 10 million earmarked for 1983, which FFr 166 million has been invested.

This will include the purchase of a new factory site at L'Isle d'Abeau near Grenoble at the beginning of this year.

However, Beauvillain says that Hewlett-Packard's position in France is not as strong as it was in 1982, with a 2.7% increase in sales compared with the corporation's average for its worldwide activities.

Beauvillain also complains of the difficulties encountered by Hewlett-Packard in reaching venture agreements with French firms.

The company had to turn to an Italian firm, Telettra, to make an agreement on establishing communications standards between Hewlett-Packard Systems and its partner's TLC-10 PARC changes.

Ironically, Telettra has since its TLC-10 licence from France's Jeumont-Schneider firm, refused to do business with Hewlett-Packard.

Makers are up in arms over cuts

by John Kavanagh
THE government is cutting back on funding that helps UK computer manufacturers try out new systems on users - even though the industry says it is one of the most important support schemes.

Under the pre-production ordering scheme, the government pays the manufacturing costs on the first 10 or 20 units and places the products with suitable users.

The scheme is part of the government's support for innovation projects, which was granted an extra £40 million, to be added over three years, in last year's Budget.

The overall funding is not being cut; money is transferred from the pre-production ordering scheme to pure research projects.

"The scheme is very widely used and very popular among manufacturers," said David Broad, chairman of the British Microcomputer Manufacturers Group.

"This will especially hit companies involved in developing new solutions to problems. It will be a big disappointment to many."

SINCLAIR... "Redressing the balance."

Sinclair's fourth finds new fields

by Nuala Moran
SIR Clive Sinclair launched his fourth computer last week, the Sinclair QL - which stands for quantum leap.

Billed as a professional computer, it has a Motorola 68008 chip, a 32-bit processor with an eight-bit data bus. It also has 128K RAM, two built-in 100K QL microdrives for mass storage, and a high resolution graphics in up to eight colours, full-size keyboard. It comes complete with four application programs at a cost of £399.

"The QL breaks into the technical, professional and senior students market for us," says Sinclair. "But it has wide applications for individual use."

Sinclair also has an eye on the BBC Model B micro market. Acorn's contract with the BBC comes up for renewal later this year (see page 6). "The BBC moves in its own way so we don't know what will happen. But we would like to find some way to redress the balance. At the moment, one company gets so much free publicity," says Sinclair.

A new operating system, QDOS, was designed for the machine. Its most significant feature is multi-tasking, with a full window capability so that up to 10 programs can be run on different parts of the screen simultaneously.

The QL also features SuperBasic. This is Sinclair's rewrite of Basic without the tears, in that it is procedure-structured, extendable and has an execution speed which is independent of program size. According to Sinclair: "It puts right all the things that are wrong with Basic. In fact, it's only called Basic all because that is what people know."

The applications software consists of four programs, QL Quill word processor, QL Abacus, a spreadsheet, QL Archive, a database and QL Easel, a graphics package.

Sinclair claims that comparison with any other machine is "almost meaningless". "We tried to resist drawing comparisons with other machines, but we did look at four popular machines and tried to estimate the cost of having a similar system on them."

He estimates that to get similar memory and mass storage on the BBC Model B would cost over £1,800 and for the Apple IIe, the ACT Apricot and the IBM-PC it would be over £2,000.

"There is a mass market for professional computers," says Sinclair. "But they cost at least £2,000."

At first, the QL will only be available by mail order, but Sinclair says that by the second half of the year it will be available in retail outlets and throughout the world.

The machine will have a \$499 price tag in the US and will be sold by Sinclair's own marketing operation, rather than through Times which sells the Spectrum.

■ Leader Comment - page 13

Government gives lead

computer and terminal interfaces, PABX features and call logging information formats. Suggested future requirements include: local area networks (1985), videotex and telex (1986), file transfer and virtual terminal protocols (1987), digital access from PABXs to public networks (1985-1987) and digital access from workstations to PABXs (1988).

The CTA accepts the need for greater emphasis on open systems standards, despite the fact that it is already involved in the DoT's Focus committee which exists to promote the use of standards.

The strategy means that government departments will have a sophisticated information technology infrastructure to support increased productivity, Hayhoe says. It means a firm commitment to replace existing facilities with an integrated voice and data network, and endorsement of the CTA's role in policymaking and management, backed by substantial resources.

He says: "Ten years ago there were only about 250 major mainframe computer installations in central government and very few terminals. Now there are around 700 medium to large computer systems, 900 smaller ones, and no less than 10,000 data terminals."

"Moreover, the number of data terminals will rise very sharply."

Eusidic urges more database openness

by Philip Hunter
PRODUCERS of public databases are urged to make their information more freely available and to conform to normal pricing standards.

New guidelines agreed by 200 major European users and suppliers of data improve the database producers to make information readily available.

The European Association of Information Services (Eusidic) is to issue a series of recommendations to suppliers of publicly-available databases, with the aim of making the information more accessible, cheaper and more accurate.

Suppliers should be responsible themselves for the accuracy of the information they provide for databases, says Eusidic chairman Harry Collier.

Eusidic is a non-government organisation funded entirely from the annual subscriptions of £245 paid by each member.

Some of the members in the organisation include IBM France, Control Data, ICL, Shell and Unilever.

"The idea is not so much to standardise, but to agree what's there," says Collier.

"It is an attempt by major producers to agree on fair trading standards."

The group was established 12 years ago in an attempt to get database standards moving.

Now members meet privately every spring to discuss technical matters, with an open conference in the autumn.

The group is also involved with lobbying organisations such as the European Commission on an international basis.

Another of its activities is to alert members to developments in their own countries, such as the Data Protection Bill presently being debated in the UK.

"We are also interested in the data protection area, ensuring we know exactly what is being done," says Collier.

Eusidic would urge members to lobby their governments if legislation attempted to restrict access to data, Collier adds.

"The main barriers to data access are in the telecommunications area, via tariffs and restrictions," says Collier.

Eusidic is in the process of getting involved in development of telecommunications standards.

MOORE... "Business improved substantially in 1983."

Record results prove semiconductor health

by Dave Madden
TWO US semiconductor manufacturers have given further evidence that the world semiconductor industry is now well out of recession. Intel has reported 1983 profits more than trebled, and it passed the billion dollar turnover mark for the first time, while Advanced Micro Devices made record profits in its third quarter.

Intel's net profit for the year to December 31 was \$116 million - against \$30 million in 1982. Turnover increased from \$900 million to \$1.1 billion in the same period. In the fourth quarter of 1983, Intel's net profit was \$47 million compared with \$8 million for the final quarter of 1982.

Gordon Moore, chairman and chief executive officer, says: "Our business improved during 1983. Advanced Micro Devices, with a second source of Intel's 8086 family processors, reported profit up from \$6.6 million to \$20.2 million, on turnover ahead 70% to \$154.6 million in the quarter ended December 25, 1983."

ICL profits look rosy

by Dave Madden
IN an aggressive and optimistic speech at ICL's annual general meeting, chairman Sir Christopher Laidlaw said he expected further growth in profits this year - though they will be modest in comparison with the 92% increase in profits in 1983.

Laidlaw indicated that orders over the past three months will "show a healthy improvement over the same period last year". But he warned that the benefits of this are unlikely to be translated into revenue until the second half of the 1984 financial year.

Laidlaw was able to point to ICL's collaboration with Mitel, with some satisfaction, rather than having to make excuses for the deal. ICL gained approval for Mitel's SX 2000 digital exchange, sold here as the DNX 2000, from British Telecom last December.

As far as its 2900 machines are concerned, Laidlaw said that ICL hoped to maintain demand for the product with new software systems - Quickbuild and Decision Support - and plug the gap to DML and Easitric. Quickbuild is a series of software productivity and design tools for data processing personnel. The Decision Support software is designed to give user-data processing managers access to data.

Laidlaw said that he appreciated shareholder's disappointment with ICL's miserable share performance, down 40% until last year, for which the company is partly responsible by admitting that it will not produce the same profits growth this time. The market responded favourably to Laidlaw's statement - ICL shares rose 7p to 59p.

The company is still smarting from the adverse press comment after its 1983 results were released, which suggested that its recovery was under threat. It has launched an advertising campaign to try to repair the damage by explaining the progress it has made since 1980.

Sir Michael Edwardes, who takes over from Laidlaw on April 2, said that he was "amused" by suggestions that his appointment would lead to policy clashes with managing director Robb Wilmot. He stressed that chairman and managing director have quite separate functions.

IBM streamlines mainframes

by Keith Holder
IBM is streamlining its System 36 and System 38 mainframes, with new models and price cuts. It hopes to rationalise these product lines in advance of additions to the ranges planned for later this year.

The internal capacity of the System 36 is doubled, while models 3, 5 and 7 of the System 38 are withdrawn. Five and seven MByte versions of the model 8 will also disappear.

The System 36 can now attach the IBM-PC and PCXT as a workstation.

Price/performance has been pepped up by price cuts of up to \$2,500 on some models, though not all are affected.

IBM commentator Mike Newman, of Interactive Database Systems, welcomed the announcement.

"They have provided users with a rational upgrade path, without having to swap around too many machines," he said.

Meet the family

Most General Automation's Zebra family - the first range of micros, minis and superminis to use PICK.

- Zebra 3500 - top of the range, this born leader beats off all the competition.
- Zebra 3500 - a natural Number Two, compatible with all the family.
- Zebra 2500 and 1500 - full of ambition, these youngsters could break away and form their own group, but always keep in touch.
- Zebra 750 - the baby of the group, but with the same characteristics as the rest of the family.

Like any family, ours has lots of features in common - perhaps more than most. Whatever your size of problem, and user or dealer, here's why you'll want to find out more.

GA created the whole Zebra family around the PICK relational database operations system. And that means downwards as well as upwards compatibility. A power to speed ratio better than many more expensive minis. New

Configuration possibilities:
 • MC 68000-based range of processors.
 • From a 1 user desk-top to a 50 multi-user system.
 • From 10 MByte to 632 MByte Winchester.
 • From 128 KByte to 1.5 MByte memory.
 • From 25,000 to £100,000 plus.

For a further introduction or an invitation to meet the Zebra family in person, please contact: Marketing Services Department, General Automation Ltd., Starling House, 20, Station Road, Gerrards Cross, Bucks. SL7 0BW. Telephone: (0753) 869112.

BRIDGE Local Area Networks

GENERAL AUTOMATION

General Automation has over 30,000 installations in 42 countries in commerce, industry and finance.

Five of ICL's nine adapted lorries that will travel 1,500 miles round Britain.

ICL takes to the road

by John Riley
ICL aims to attract 10,000 top decision makers to the five-month-long road show it launched last week.

The show, which will travel to eight locations around the country, is designed to illustrate how ICL's systems interlink in a working environment. The actual products take a back-seat.

"This is not a product show," explained Tim Barnsley, the show's manager. "It is to give invited decision makers an overview glimpse of how our

systems interact. That is why the mainframes in the 'engine room' are out of sight."

According to Barnsley, the show involves 12 million worth of computers, 60 kilometres of cable, and enough power to supply a village of 200 people.

The display is organised into booths, each of which represents a different activity of one hypothetical company. The aim is to show how changes in one department and their ripple effect on other departments can be interlinked using an ICL computer system.

"Our purpose is to explore some of the common problems found in most organisations and to show ways in which they may be solved by the effective use of information technology," said Alan Russell, director of ICL's UK division.

The hypothetical company has seven main departments - finance, sales and marketing, design and development, production, retail, and personnel, - which are manned by 80 well-rehearsed ICL staff.

A wide range of equipment is used in each booth, linked to

either a 2966, ME29 Model 54 or System 25 Model 71 machine, and 34 ICL application packages are employed.

Martin Scott, ICL's product marketing manager for the UK, would not say how much the show is costing, but believes it will pay dividends: "You have to offset the cost against the expense of going out to, say, 1,500 top prospects," he said.

Venues for the show are London, Blackpool, Glenside, Birmingham, Leeds, Newcastle upon Tyne, and Cheltenham.

...and how they look when they arrive at the show.

SALES BRIEF

Five systems to aid kidney patients

WEST Midlands Regional Health Authority has ordered five computer systems from London-based Clinical Computing, and the first is now installed.

The systems are for use in accumulating and analysing data on kidney transplant patients.

Same again

CENTRAL Statistical Office has ordered two more 68000-based computers from Bleasdale Computer Systems to run Unix applications including multi-user word processing, spreadsheet analysis and relational database management. The office now has three Bleasdales, which can be hooked up to bigger Sperry computers via RS232 ports.

\$1m contract

DARKCREST has chosen Century Data Systems to supply 8in fixed and removable 80 Mbyte disc drives for its Thunderbolt II desktop 68000-based Unix system, in a \$1 million contract. The new micro offers up to four Mbytes main MOS memory, and prices start at about £10,000 for a complete system.

Pay package

RANK Hovis McDougall, the multinational food conglomerate, has picked an accounts payable package supplied by Management Science America for paying wheat suppliers. The package is to be installed on the group's IBM-compatible NAS mainframe running the MVS operating system, at the computing centre at Harlow, Essex.

Nixdorf repeat

NIXDORF has sold a second mainframe to CP Pharmaceuticals for order processing and management control. The new 8800 Model 55 will be linked to the existing 8870 Model 10 via dial lines and modems, and will run Nixdorf's Comet business software.

First UK dealer

UNISON Technology, the exclusive UK and Europe distributor for the Altos range of multi-user micros, which run the Pick operating system, has appointed its first UK dealer, Tripoint Associated Systems in a contract worth £250,000. The Altos micro was unveiled this week at the Whiz Computer? show in Birmingham, and the intention is to appoint several dealers to attack vertical markets - shipping transport and freight forwarding in the case of Tripoint.

Police order

BURROUGHS will supply South Yorkshire Police with 10 B20 series microcomputers for administration of two incident centres. The police used Burroughs' micros on the triple murder enquiry at Dore, Sheffield, with the help of BOS/Auto Index, a storage and retrieval package.

Zilog deal

ZILOG UK has swung a £1.3 million deal to supply Scandinavian software house Metric Group with Unix systems. The contract is for a minimum of 100 Zilog Series 8000 micros, which will go to various organisations throughout Scandinavia, including the Swedish defence department. Product support will come from Zilog's north European base in Maastricht.

ONLY ONE SUPERMICRO KNOWS 13 LANGUAGES.

The keys to your success, now and for the future, are flexible systems with a breadth of languages that protect your software investments. These languages save you time, minimize effort, and give you a powerful tool, particularly useful for the many end users looking at updating their hardware.

Considering all this, consider the Pixel 80. Not only do we have a catalog of programming languages and development aids that is unmatched in the 68000 Unix world, we have a wide range of data base management systems, word processors, spread sheets, and ready-made applications packages.

HARDWARE POWER TO MATCH SOFTWARE POWER.

A few hard facts:
1. The Pixel 80 has a multi-processor architecture. A 10 MHz Motorola 68000 runs the operating system and user programs. It can fetch memory as fast as a 68000 can go.
2. With up to 6 million bytes of no-wait-state RAM combined with hardware-memory mapping, the Pixel 80 makes possible applications that could never before be run on a microcomputer.

3. Winchester and floppy disk drives combined with cartridge tape back-up and software file management techniques allow for flexible growth and expansion. ALL THIS AND IT'S EASY TO USE.

Our Unix operating system includes Berkeley, PWB, and Pixel enhancements. It's powerful, portable and very, very friendly. LOOK TO THE FUTURE.

Something to consider: while the Pixel 80 almost matches the VAX 780 in raw computing power, it is less than a third its price. Yet as attractive

as our price/performance ratio is, we maintain that the ultimate reasons for considering us are our unmatched range of languages and great software support. Because in the future the ones still standing will be the ones who know the most, and speak the best. With Pixel 80 you've already got a good jump on the future.

For more information call 0925 828181 or write to Pixel Computer (UK) Ltd, The Genesis Centre, Garrett Field, Science Park South, Birchwood, Warrington, Cheshire WA3 7BH.

KNOWLEDGE IS POWER.

Did you once have a dream?

...of an Information Centre that works perfectly? Of happy and contented managers receiving all the information they want, whenever they need it?

Do you still dream of users being able to create their own individual systems quickly and easily?

...of users throughout the world smoothly accessing corporate information sources, or, just as easily, key public databases?

...of dynamic applications all sharing a common development language and user environment, whether mainframe or micro?

...of a strategy which anticipates the future, rather than struggling with problems inherited from the past?

I.P. Sharp can make this dream a reality - today. They have been running a Global Information Centre and one of the world's largest communication networks for more than 15 years.

IPSA provides a fully integrated user environment and a range of advanced utilities and packages handling every important information processing requirement.

The IPSA service can be supplied in-house, or externally on I.P. Sharp's own system, or as a combination of both.

In any form, IPSA gives users local access in 600 cities to the world's largest source of public numeric data, together with the world-wide, personal support of I.P. Sharp's sixty branch offices.

Now, I.P. Sharp are offering their experience and facilities to managers who are developing corporate Information Centres. All or any of the services comprising the IPSA Global Information Centre are available to support and complement your in-house system. IPSA software can bridge the gaps between existing applications while also satisfying virtually any new user requirement.

I.P. Sharp are holding a professional seminar to discuss the Information Centre and their solutions to its inherent problems. It will take place on the 8th February at London's City Conference Centre. If you would like to attend, please fill in and return the application form as soon as possible.

I.P. Sharp Associates, 132 Buckingham Palace Road, London SW1W 9SA. Tel (01) 730 4567 Telex: 8954178 SHARP G

I am interested in developing the concept of the Information Centre.

Logica expects to double production

by Philip Hunter
LOGICA VTS double production at its Swindon factory this year after a clutch of big orders for its VTS 2200 business system.

The company has supplied the French Ministry of Justice with 130 systems worth £1 million in the last six months, with more installations at French law courts expected this year.

Total sales of the VTS 2200 were about £10 million for the year ending June 1983, but production is now running at 160 a week. This year the product is expected to earn over £20 million.

ICL buys 120 of the 160 units produced each week as part of its OEM agreement with Logica, and sells essentially the same product as the DKS 8080. Some of the products are sold via ICL to British Telecom's Merlin office automation division, which resells them as the BT Merlin 3300.

The VTS 2200 was originally developed in a joint agreement between Logica and Nexos, the now defunct government-owned office automation group.

Gestner has offered to buy Nexos, but lost interest when a reading of the small print of the contract involving the VTS2200 revealed that Logica would keep full manufacturing rights for the product.

ICL initially took marketing rights before signing the OEM deal with Logica.

The VTS 2200 is one of the few 16-bit word processors available.

BURDEN... Machine will be free of production problems.

Optim extends range

by Philip Hunter
BUSINESS micro distributor Optim MCS this week extended its product range by launching a 68000-based UK-built machine at the Which Computer? Show in Birmingham.

The computer, to be sold with a range of accounting, office automation and spreadsheet software, was a joint development between Optim and the Armstrong engineering group.

Armstrong will build the machine in Dudley, and Optim

will have the sole UK distribution rights. Mike Burden, Optim joint managing director, says that the deal has yielded a machine that will be free of production problems, since the Armstrong group, which turned over £100 million last year, has plenty of production capacity.

The machine runs the Unix and BOS operating systems, along with the high level languages Cobol, C, Fortran, Basic and Forth.

The Optim also runs the Unix office automation system.

Report raps poor university set-ups

by John Riley

BRITISH universities need 50,000 workstations worth up to £100 million over the next 10 years to supply industry with computer literate graduates, says a recent report.

The report, published by a working party set up by the Computer Board for Universities and Research Councils to investigate computer facilities for teaching in universities, hits out at poor university computing facilities, and says that at least one student in five should have a workstation by 1990.

"Existing facilities are inadequate, both in quality and quantity to produce graduates who will be able to play a leading role in the technological future of the UK," according to the Board.

Deficiencies in university equip-

ment are listed: they include insufficient terminals and file store, poor response times, and the need to replace batch systems and inadequate graphics facilities. Another fault identified was poor cooperation between universities on software development.

The report recommends minimum requirements for a university workstation. The Computer Board, which funds university computing in the UK, has considerable influence over manufacturers, and has already insisted that minicomputers and mainframes used in universities should conform to its "coloured book" open system standards.

The university workstation should have the computing power of a Motorola 68000-based machine, at least 256 Kbytes store, at least a 512 Kbytes floppy

disc drive, and should link a Ethernet or X25 local area network.

It should also have standard high level language compilers, colour graphics, and should support multiprocessing (with Unix-like operating system), real time memory facility, and the ability to carry out process communications over a network.

The source code for all the system software should be available, and the initial price for the complete workstation should be £1,000-£2,000.

The report also calls on the government to follow the example of the US tax authorities and allow companies tax relief on computer and IT equipment which are given free to universities.

BBC aims for wider literacy

by Donald Kennett

THREE new add-ons for the BBC Micro are on their way this spring as the start of a massive expansion of the BBC computer literacy project. A new generation BBC Micro will follow, plus further telese-

ware broadcasts, software on cassette and disc, books, radio and television programmes.

The add-ons are being developed by Acorn Computer, the maker of the current BBC Micro. They are a £103 viewdata adapter due to go on sale at the end of March, a £195.50 6502-based second processor board that will allow some programs to run much faster, and a 280-based second processor board that will allow the machine to run CP/M software.

The second processor boards are due in April and May and the 280-based one is expected to cost be-

tween £300 and £400.

Aubrey Singer, managing director of BBC Television, said that the Corporation was talking to several manufacturers about the new machine and that a decision would be made in the next few months. Asked whether it had considered launching a less expensive machine, he said: "No, we haven't." The BBC Model B costs £399.

John Radcliffe, executive producer of BBC Continuing Education Television, said: "That need is well served by machines already in the market. The value of our machine is in the education market, where the need for an expandable machine is borne out by our experience."

He went on: "A very large thrust of our publication activity is going to be in support of educa-

tion, where first, not many publishers are making much money out of it, and secondly, there is a shortage of good software."

"Teleseware is a revolutionary and extraordinarily important development which is only at its beginning. It has been running since September and over the next year you can expect big developments."

The bulk of the teleseware sent out so far is transmitted continuously as part of the BBC's (fax teletext service and a spool teletext adapter is needed to get the programs into the micro.

But the BBC has experimented with sending data as an audio signal during an ordinary television or radio broadcast, usually late at night, and this is to become a regular feature of programmes in the future, starting with the Chip Shop programme on Radio 4.

STC aims for Xtra boost

by Keith Holder

THE microcomputer division of STC has challenged other manufacturers to submit their micros to an independent panel to discover which is the most IBM-compatible.

STC claims the Xtra, which it launched in the UK last week, is the most IBM-compatible machine on the market. The Xtra, which is manufactured by US multinational ITT and marketed by STC in the UK, is able to run MS-DOS and any IBM or third party software package, together with most peripherals, STC says.

To prove its point, STC has invited makers of other "IBM lookalike" machines to submit them for an independent compatibility test, with results to be published later this year.

The arrival of ITT's Xtra microcomputer does not mean the end of the road for the company's earlier 3030 system, according to Stuart Goldberg, marketing manager of STC business microcomputers, which markets both systems in the UK.

He admitted, however, that failure by ITT to deliver a promised 80286-based add-on board to convert the 3030 into a 16-bit IBM-PC compatible system made the product less attractive now that Xtra had been launched.

Xtra will be available in the UK in three months' time, and will run under the BOS operating system, used on the 3030, as an option.

Delays with the 80286 board were due to failure by Intel to supply the chip, said Goldberg. Xtra, the first of a planned range, should not suffer similar troubles, said Goldberg, as it is entirely built by ITT in the US. Possible European manufacturing sites are also being looked at.

Although marketed by STC Business Microcomputers, a new division set up specially to cover all ITT's micro machines, most sales of Xtra are expected to come from a dealer network.

Goldberg said that dealers would be free to stock other companies' compatible software and peripherals.

GOLDBERG... Xtra does not mean end of road for earlier system.

Thorn-EMI sets up Televideo arm

by Philip Hunter

THORN-EMI has acted quickly to handle distribution of Televideo business computers, following its appointment last week as exclusive UK distributor for the Televideo machines. It has set up a new distribution company, Computeraid, headed by Pat Harvey, formerly North European marketing director at Televideo.

Meanwhile, the previous three Televideo dealers, Midlectron, Encotel and Colt Computers still hope to become Televideo OEMs and retain their dealers. But Midlectron would not comment on the outcome of a meeting with Televideo last week.

"Thorn-EMI wants us to become an OEM, but we're not sure that we will," said Midlectron operations manager Chris Base.

Televideo vice-president for international sales Alan Pratt said that Thorn-EMI had been chosen to replace the three existing UK distributors because of the need to have a big name behind a renewed push in Europe.

"Thorn-EMI is better known than Televideo in the UK," he

pointed out. "We also hope that is only a temporary condition."

Pratt added that Televideo intended to phase out the previous three UK distributors as far as computers are concerned, but that they would be retained for distribution of terminals.

Televideo's market penetration in the UK has so far been disappointing. But according to BCU Computers, originally one of Midlectron's dealers for Televideo computers, this had not been the fault of distributors or dealers, but of Televideo itself for having out-of-date software. "The main problem is that the operating system is not up to date," said a spokesman.

But Televideo's TS 1605 micro will become available in the UK next month, offering IBM PC-DOS compatibility and applications software written by Thorn-EMI at around £2,600 for a complete system.

Televideo chairman Philip Hwang claimed that this new machine offered more IBM compatibility than the TS1603, which would run MSDOS but not PC-DOS programs.

Just a ✓ away from the best Digital systems

Hoskyns is Digital's largest Authorised Computer Distributor in the UK. Around 600 elements of our application and industry systems are now in use in over a hundred major Digital installations in the UK. If you would like more details of Hoskyns extensive range of software and services specially designed for Digital equipment, just tick the list and return to us.

ACCORN Microsystems are manufactured in Britain by NEWTONS Laboratories

Teleprinter Equipment your first choice for peripherals

Teleprinter Equipment specialise in the supply of high quality peripherals for OEM's and large end-users at best prices: meeting all your needs for printers, VDU terminals and tape preparation equipment.

High Quality KSR, ASR and RO printers cover the complete range of dot matrix, daisy wheel, dual mode and colour matrix printers: from 16cps to 400cps. GE 200, 2000 and 3000 Series matrix printers; GE 300 and 510 Series line printers; T1820 Victor, NEC and Microform matrix printers; Qume Sprint II and Silver-Reed daisy wheel printers; and Prim colour matrix printers.

High Resolution, high reliability VDU terminals from Geveke, Qume and Teletype editing terminals. Plus the new Lynne colour VDU - fully compatible with the Prim colour matrix printer.

Nationwide field service support A major TE strength. A range of maintenance contracts is available, offering both field and in-house service. Additionally, all major products carry a 90-day on-site warranty inclusive of parts and labour. Interface modifications, custom colours and overseas service support can also be arranged.

Attractive OEM/Minor Account agreements A generous discount structure is operated on a 12-month cumulative basis incorporating additional benefits (software, demo equipment etc.). All products are available on a rental basis.

For full details on the complete product range, major account policy and service support - just ring Teleprinter Equipment.

Service and Quality Assured

CAE GROUP
Associated Companies GAD, CAE, etc.
CAE Group UK supplies computer peripherals from General Electric, Geveke, GNT, Inpage Data Systems, Nival, NEC, Newco, Qume, Silver Reed, Spectra Machine Telecom, Teletype, Teletype and Telex International.

DEC SYSTEMS A CARE SPECIAL

FOR SALE
New, unused Digital PDP-11/70 Message Switching System.
Comprising:
Complete 11/70-AD system
1 x additional RM03 (2 total)
2 x additional LA120 (total 3)
Additional 512KB memory (1MB total)
Expansion boxes and backplanes
DB11-H and KW11-Y
3 x autodiallers
Barrier equipment plus sub-rack
Line switching unit
Colour monitor
DEC installation only.
Software by arrangement.
Price £85,000.
DEC, PDP-11 are trademarks of Digital Equipment Corp.

16-User Simultaneous CP/M-80 and CP/M-86

The ACCRON multi processor architecture has one service processor and up to 16 mixed Z80 and 8086 based user processors. Each has high speed (1.7 Mb/Sec) access to shared resources such as disks, tapes and printers. The main features are:

All standard CP/M and CP/M-86 will run simultaneously without modification. Unlike timesharing systems such as MP/M, each user has a large TPA and no CPU degradation. Comprehensive multi-user file management provides file and record locking, spooled printers, 5.25" or 8" Winchester and / or local printers and interprocessor communications. Field proven S100 system. Users include: British Telecom, Local Authorities the NHS and corporate users such as Cadbury.

Many multi-user packages are implemented including Omicron Management Software, Taylor Micro Manufacturing Software, Dataflex and DBASE II. Multi-user CIS COBOL Fileshare fully implemented. Largest range of microsystems based on 5.25" or 8" Winchester and / or cartridge disk drives. 12-Slot machine with 8" 1.3MB Floppy and 10MB Winchester from £4,340. Three user machine from £6,300.

Phone John Ahern or Steve O'Donnell for more information. Dealer enquiries invited.

Data Dynamics buys its way into micros

by John Riley
SHELTON Instruments, the London-based microcomputer maker, has sold the manufacturing and marketing rights for its Sig/Net machines to peripherals manufacturer Data Dynamics.

The deal frees Shelton Instruments to concentrate on innovation and takes Data Dynamics into microcomputers.

There is a link between the two companies. Data Dynamics is a subsidiary of Innover, the investment company run by David Sainsbury, which also has a small stake in Shelton Instruments.

Shelton Instruments started as a

consulting engineering organisation run by managing director Chris Shelton, who designed and built the eight/16-bit Sig/Net multi-user micro. In two years, Shelton sold 2,000 units and finished the last fiscal year with a £2.5 million turnover.

The Sig/Net series has sold well in the business and educational markets, and its robust construction has been proved by continuous use over many months in dusty conditions on archaeological sites in Sri Lanka and the City of London.

Data Dynamics, which manufactures printers and distributes

ADDs' visual display units, was taken over by Innover two years ago. Data Dynamics had been put into receivership after its chief accountant was jailed for 18 months for embezzling £39,500.

The company is now firmly back on the rails and in 1983 had a turnover of £3.5 million. "The acquisition of the Sig/Net rights will add £3.4 million to our turnover in the next 12 months," said Data Dynamics' marketing manager Richard Steggall.

"Shelton Instruments will retain its own identity," said Steggall, "and has reverted to its original

role of innovating, and dreaming up brilliant ideas, where its strengths lie. The company is now confined to developing Sig/Net for us."

The deal will also boost Data Dynamics' export drive. It currently exports 35-40% of its products, according to Steggall, and could manufacture Sig/Net microcomputers in France through its sister company Peripheriques, also owned by Innover.

Shelton Instruments has been actively selling to France, and was one of the seven UK exhibitors at France's largest computer exhibition, Sicob, in Paris last autumn.

AT&T plant goes on

by Philip Hunter

AMERICAN Telephone & Telegraph will next month resume construction of a \$400 million high volume microelectronic component plant. Two years ago AT&T abandoned it because of a slump in the market for integrated circuits.

The 800,000 square-foot plant in Orlando, Florida, is now due to be finished early in 1985 and will then be producing 256K dynamic RAMs and other large scale integrated circuit devices.

In January 1981 work was begun on the plant by Western Electric, then a subsidiary of AT&T and now subsumed into the larger subsidiary AT&T Technologies as part of divestiture plans.

But work stopped on November 1981 with only the outer shell of the building complete, when demand for semiconductor products fell off. "We started up again because of the rather dramatic increase in the integrated circuits sector and surging demand for our products," said an AT&T spokesman.

AT&T has been marketing 256 DRAM chips made at its factory in

Pennsylvania for over a year, but spokesmen declined to say how many had been sold.

AT&T and other US firms making semiconductor products will have to step up production quickly to prevent the Japanese capturing the bulk of the mature market for 256K DRAMs, as they have already done for 64K RAMs.

Intel, for example, is still at the pre-production stage, and will probably start volume production of its CMOS version of the 64K RAM before introducing a 256K device.

Most 256K DRAMs are built CMOS rather than NMOS systems, and several Japanese firms are starting volume production. Among the Japanese leaders are Fujitsu, the world's eighth largest chip maker, Hitachi and Mitsubishi.

Hitachi recently claimed that it was the first company to develop a one Mbit RAM, and said that the design would be shown at the International Solid State Circuits conference in San Francisco next month. Samples are still some way off.

Texas and Fujitsu team up

by Philip Hunter

SEMICONDUCTOR giants Texas Instruments (TI) and Fujitsu are teaming up on the production of gate arrays.

The alternate sourcing agreement will last for at least six years and covers Fujitsu's families of bipolar and CMOS gate arrays, with TI designing and producing compatible versions for worldwide marketing.

The two companies will also exchange software to make their computer-aided design tools compatible, offering their customers a common CAD interface for gate array design.

Fujitsu was beginning to have difficulties satisfying demand, according to product marketing engineer Steve Tomlinson.

"We were reaching the point where existing customers would stop using us because of that," he said.

Fujitsu has already sold gate arrays to many major OEMs, says

Tomlinson, but the deal with TI will give the company access to smaller buyers of semi-custom devices.

The deal could later be extended to cover other gate array devices according to Milton Kuser, a TI product manager, who took part in negotiating the deal.

A gate array is a piece of silicon containing a large number of interconnected logic gates. The customer uses CAD techniques to connect up the logic gates according to his own particular requirements.

Following the agreement, the CAD tools of the two companies will be effectively interchangeable. This means that customers will be able to supply the same detailed design of logic, timings and test operations to either company.

Toshiba's link with LSI Logic is the only other example of a second sourcing deal for gate arrays between a Japanese and a US company.

Graphics tablet beats mice

by Donald Kennett

READING-based Information Entry is ready to hit the big time with a new device that has been the undoing of others before it.

It has developed a graphics tablet that can be manufactured in large quantities at low cost, is simple and robust enough for industrial environments, compact enough to be portable and versatile enough to be better than a mouse for screen control, according to a company spokesman.

It is now looking for OEM customers who will integrate the device into their workstations in

large numbers. In particular, it hopes to interest a large US company in marketing all its Multigraphics tablet products in the US and elsewhere overseas.

Sales director Phil Harris said: "We finished the development three months ago and now we are starting to ship."

The tablet is made using thick film technology, which makes it simple and moisture-proof. It has a resolution of 1,024 by 1,024 points in an A4-sized pad and it can accept coded overlays to give it a large variety of easily-set-up applications.

Japan enlists Ada in world leadership bid

ADA will play an important part in the Japanese plan to beat the world in computers, a British conference on the language has been told.

Mike Rogers, of the Common Market's Esprit programme, said at the third Ada UK conference at York University that Japan was making significant effort as well as its fifth generation Prolog.

Ada would be available before the revised version of Prolog, he said, and it was already claiming that the language gave a 27% improvement in programmer productivity.

Rogers painted a gloomy picture of the changing strength of information technology in Europe and Japan.

"There is no lack of innovation in Europe, but we are very slow to bring ideas to market," he said. Europe's trade balance in IT was deteriorating rapidly while Japan's was improving. In 1975 Europe had a \$1.7 billion lead, but by 1990 that would be turned into a \$10 billion lag, at a conservative estimate.

He complained of an imbalance between the EEC's large subsidies for agriculture and the tiny invest-

ment in research and development among its 20,000 IT companies.

In the era of transistors Japan had been five years behind; but now in the 64K RAM era it had moved ahead. The Japanese were getting their new products out in eight months. Europe took 15.

Among these new products was a major implementation of ADA by Japanese telecommunications giant NTT, which was also working on a version of Chill. But Japanese efforts had run into snags, he pointed out. He rejected the pessimistic conclusions of Ed Feigenbaum in a recent controversial book.

"He assumes they will meet all their objectives," said Rogers, "but they are only human. They'll meet some of those objectives, but not all."

Outlining the EEC's Ada schemes, he said they intended to launch the development of a full-scale Ada program support environment (APSE) and to back research into applications for manufacturing and telecommunications. They were looking into setting up a European validation service similar to that of the US Department of Defence.

John Barnes, of systems house SPL, one of the language's pioneers who chaired the conference, was hopeful that the British government's MCHAPSE initiative would go ahead on a limited scale. The £9 million plan was hit by a funding dispute in the autumn, leading to the withdrawal of one of its sponsors, British Telecom.

Barnes did not foresee any further work on the Chill element of the project but said they were in the process of re-establishing funding for various significant parts of it.

"Over the months to come a lot of important work will be sorted out again," he said. One of the problems had been that they were not sure of the detailed objectives that needed to be met.

But he admitted that the original timescale had envisaged the project reaching completion by 1987.

He said 1983 had been the year in which Ada started to take off. This was shown by the ANSI standardisation in February, followed by the DoD validation exercise. The community had been surprised when the Data General-Rolm compiler became the first to be validated as not many knew this work was going on. Soon after that

Western Digital's version had been validated.

It was apparent that commitment to Ada had grown with DoD backing. It had been a good year for compilers, if not for environments. The Telesoft, Data General and Intel compilers were being demonstrated at the conference, as well as York University's own.

He dismissed fears that the language would prove too complex. "We haven't found any training problems at all," he said.

Commander Trevor Syms spoke of a NATO software crisis which had been the focus of a meeting in Holland in December.

After listing the areas of weakness, he commented: "That doesn't leave an awful lot of space for success stories."

In November 1982 NATO had adopted Ada as its standard high-level language to be implemented by January 1985, "subject to satisfactory development in the marketplace".

He saw no way that NATO could impose a "chop" date after which all programs would use Ada. This meant some programs might have to use a mixture of languages and that Coral/Mascot would continue.

BARNES... "A lot of important work will be sorted out again".

Recognise these managers? Henley does.

- ☐ Just started on the management ladder and needing all the training he can get?
- ☐ Scientist, engineer, accountant or technologist with new managerial responsibilities but only limited time for training?
- ☐ Professional manager needing to communicate more effectively with specialists in finance, production, marketing, etc?

- ☐ Mature self-made manager who seeks to be brought up-to-date in spare time?
- ☐ Formally trained but recognising the importance of keeping abreast of the latest techniques?
- ☐ Manager in small business, far too busy for training courses?
- ☐ Ambitious and hungry for management training to enhance career prospects?

Recognising the type means recognising the training opportunity.

Whatever the type of manager, whatever the career stage, here is a unique opportunity to improve managerial performance. Without taking time off work or deserting the family for residential courses.

The Management College at Henley, Britain's leading business school, is now able to offer its world-famous management teaching expertise in the form of stimulating self-contained study courses using the latest 'distance learning' techniques.

Work at any pace, anywhere, anytime.

Using an integrated package of innovative workbooks, video and audio cassettes, students can study individually at home or on a group basis within their company - working at their own pace, in their own time. Support and guidance is provided by Henley. These elements make up a new and personal learning experience providing today's most effective managerial development.

Already chosen by over 100 companies.

Many organisations have already purchased the first two courses (more will be available soon). Large companies often use them as the foundation for their own internal development schemes, while for the smaller business they make training viable to a much wider sector than before.

Why not discover for yourself the many time and cost benefits of Henley Open Management Education?

'ACCOUNTING FOR MANAGERS' is designed for managers who have little or no training in the financial aspects of their roles and who wish to improve their understanding of accounting techniques and terminology to enable them to make better business decisions.

THE EFFECTIVE MANAGER - MANAGING FOR RESULTS - is a stimulating course which identifies and develops the personal skills required for good management and helps the manager to identify his own strengths and weaknesses and improve his effectiveness.

Future courses.

Courses covering many management topics are in preparation, including Marketing Management, Information Management, Personnel Management and Industrial Relations.

DEC User Society is shaken up

DEC User Society (DECUS) has had a shake-up. A new business group intended to be hardware-independent and aimed at DP managers holds its first meeting on February 2. The commercial user group, has been converted into an RSTS special interest group, to convene on February 21 and the former Vax talkshop is renamed the VHS special interest group.

Training venture

ANEX Unix and artificial intelligence training venture has been set up by London software house Quantime, involving three ex-staff of the Span recruitment group. The company, called The Instruction Set, has Peter Griffiths as managing director and Mike Banahan as technical director. Banahan serves on committees of the Unix European User Group and American National Standards Institute.

Micro Focus buy

MICRO FOCUS, the UK Cobol specialist, has bought RDL, a subsidiary of Californian Unix developer Santa Cruz Operation. The deal involves Santa Cruz receiving Micro Focus shares and giving up its right to royalties on the C runtime system, which enables Micro Focus Cobol products to run in the Unix environment.

First earnings

ABOUT 7,750 authors will receive their first earnings through the public lending right next month, calculated by a Logica program. Loans by 16 sample libraries in the first half of 1983 were recorded and processed on a Perkin-Elmer 3210 mini at Stockton-on-Tees.

Package for GPs

US MINI-MAKER Digital Equipment has produced a software package for general practitioners, to run on its Professional 350 micro. Based on the Exeter Community Health Project, set up by the government in the early 1970s to examine the use of computers in patient care, it handles records, prescriptions and visiting schedules.

Banking house fights for survival

A BIG US banking software house, fighting for survival, has had to default on a \$45 million credit agreement.

The company is Anacom of Indiana, whose Continuous Integrated System (CIS) development has fallen way behind schedule and plunged the once prosperous operation into debt.

In the year to last June it lost \$4 million on a turnover of \$172 million, and in the first quarter of the present tax year it lost \$12 million. At its zenith Anacom had some 2,700 staff worldwide.

Delays in debugging the banking suite have frightened off potential customers - the client list has been static at 16 for months - and allowed rival Hogan Systems of Texas to edge in with a simpler solution which is already available.

Software File is compiled by George Black

Anacom has spent four years wrestling with the programs and now has begun to lay off staff. It has also abandoned a joint venture with Cullinet for a slimmed-down version of CIS aimed at smaller banks.

This week chief administrative officer Christopher Duffy refused to speculate whether the company would come back into profit or when its licensees would get their system delivered. But he said: "Things are now looking very positive" in negotiations with our bank and the project itself is coming together quickly."

A test site at Provident National Bank in Philadelphia had begun a limited service in December.

Chairman and founder Ronald Palamara has put in \$1.25 million of his own money to try to stave off

the threat of filing for bankruptcy. The company says the main reason for its financial difficulties is that the piece of software turned out to be much bigger than anticipated.

Software boss who had to eat his words

DAVID ESKRA does not pretend to be a prophet. Which is just as well for in 1967 he said: "Nobody in the world will buy this thing called software."

Now he is president of Pansophic, one of the big six contenders in the £250 million market for IBM CICS development aids.

Eskra joined Pansophic in 1979 and was asked to take over day-to-day running by Joseph Piscopo, the chairman, in May 1980.

"I first met Jo in 1965 while teaching Cobol programming. He was in my class," says Eskra. "He

thought I was a pretty smart guy to not write a line of Cobol in my life until I taught it."

But it was Jo who was smart enough to form Pansophic in 1969. Eskra meanwhile was with RCA, at that time one of the seven dwarfs in the US computer market following "Snow White" IBM.

Eskra rose from technician to sales manager with RCA, before the company left the computer business in 1972. This put Eskra out of a job, but he took the chance to pick a change of course.

"I saw a tremendous opportunity in the computer services field," he says. He joined Cognia Systems, a subsidiary of Swift, and moved to the presidency before the company was sold off in the mid-1970s.

"While there I got a taste for software," Eskra admits. But the problem was that the company was

under-capitalised, and ran out of ready cash. So when Eskra joined Pansophic, he at once set about preparing the firm for a public offering. This was made in August 1981 and raised \$10 million.

Much of this money was spent paying off debts. Almost \$7 million went on settling the bill for Easytrieve, the IBM database enquiry system acquired in 1979.

After his past experiences, Eskra likes to keep a steady head of liquid cash, and last July tapped the then bullish Wall Street market for another \$30 million, bringing reserves to \$40 million.

Like other US software houses that have recently raised millions on the stock market, such as MSA and Cullinet, Pansophic plans to snap up a few small software houses and distributors.

"There are four or five companies that we are pursuing," says Eskra. "We are looking at two database vendors."

Takeovers of big companies worth more than \$15 million are effectively ruled out for Pansophic because of US tax laws, according to Eskra. In practice, Pansophic would have to use its shares to pay for the takeover, rather than cash. And Eskra would not want to do this because already many of the shares have been sold to the financial public, and any further release of shares would leave directors without a majority holding.

US tax laws specify that cash used for large takeovers above \$15 million can only be written off against tax over a seven-year

period, which is expensive because of depreciation.

Pansophic's market is now in what is called online IBM applications development under the CICS teleprocessing system. Cobol programming is replaced by an English-like language that generates Cobol code.

At least that is the theory. In practice much Cobol code still needs to be written, and many programmers still prefer to write it.

Pansophic and its main competitors, Cincom, Cullinet, ADR and Oxford Software, have been successful in reducing IBM's share from 80% in 1979 to about 50% now. Pansophic has steadily increased its sales by 15% a year since 1979, reaching \$43 million for the year ended April 30, 1983. Net profit was \$5.7 million this year.

As IBM's share of the market continues to decline, a battle is on for dominance between the other

companies in the field.

Eskra sees Cincom as the main competitor. Both Cincom and Pansophic are promising users a rich catalogue of new products for 1984. Pansophic relies mainly on its traditional mainframe business, and has just released Genet/OL, the latest CICS development tool which the company claims can be used to develop all transactions and reduce further the need for Cobol and the other widely used high language in IBM environments, PL/I.

Cincom plans to introduce similar products in 1984, but is placing more emphasis than Pansophic on linking IBM Personal Computers to mainframes.

Not that Pansophic is ignoring the IBM-PC. "Our products like Genet/OL will all work on the PC," says Eskra. But the PC has limited capacities as yet, and users will want all the facilities of the mainframe version, he adds.

Thirdly, it's reliable; a package which has been successfully installed in two or three sites can be expected to be free from the subtle errors which are often found in the most carefully tested bespoke systems.

The advantages, then, of packaged software are: low cost, quick implementation and high reliability.

This appears to be an almost unbeatable combination and is attractive to a manager who is considering a new computer. The manager is well aware of his competition who face the same problems and he has to believe that in the 20 years since computers have been commonplace, someone has solved those problems before.

It is this sort of thinking that leads to the decision to use packages; a decision that is appropriate in many situations.

In other situations it is very wrong.

To understand the limitations of packaged software we have to start with the notion that each firm solves its business problems in a unique way. These unique solutions are the result of management perceptions of the market into which it sells and of the company and its abilities.

These solutions to business problems become "company policy". The policy can be written formally or simply be implicit, but it lays down the rules by which the staff perform their daily tasks. Beyond that, it gives each company its individual character and its competitive position in the market.

Computer programs reflect the policies of the company for which they were first written. From this point of view when one asks "Does this package fit?", one is really asking: "Do the policies implicit in this package match the policies of my business?"

It is a question worth asking because a computer will impose its rules on the company that installs it. If the rules fit, it will be a lot of discipline for the staff. If the rules do not fit, there will be a great deal of time and money wasted trying to cope with the computer which is following some other company's policies.

The advantage of purpose-written software is that it permits the management to specify its own policies, its own rules and its own practices.

But the choice is rarely only "package or purpose-written". A well-designed software package will have been written bearing in mind the problems outlined above. They will contain facilities which make them relatively easy to modify. Thus, a good sales ledger can

be extended to include product sales analysis and a good purchase ledger can be modified to provide project costing.

Some modifications, however, are always difficult. Modifying a single currency ledger to accept multiple currencies, for example, can be very cumbersome indeed.

The manager considering buying software should list the functions which he wants to computerise; list his policies which apply to those functions; and review the policies to identify those essential to the company's market position, and those that are simply "the way we do it".

The latter can be changed, the former may be, but not by a packaged computer program.

Having completed these steps he is in a position to review the packages available in consultation with the software house which will provide them.

The questions he should ask are: Does the package perform the functions I require, or can it be modified to do so? Does the package match my essential policies?

Where packages fit, one should use them because they provide all the advantages mentioned above. Where packages can be modified to fit, modify them and use them for the same reason. When the appropriate package is not available do not hesitate to commission purpose-written software which implements the policies of the firm.

In the long run it is by far the least expensive course.

An intelligent application of its current policy could greatly aid UK suppliers in preparing equipment that can compete in the international marketplace.

1984 and all that . . .

THIS week's example of the strange things people say about computers was sent in by Gary Priddis of Wilmslow, Cheshire, who wins £5.

The survival of the human race will soon be taken out of the hands of governments and given to computers.

Dennis Healey in party political broadcast

THE article "Will we really be able to pull the plug?" by Roy Atherton (*Computer Weekly*, January 5) implies that at the time of Babbage, computing was concerned only with numerical quantities. If we consult Babbage's programmer, we see that this is not true.

The following quotation from Ada Augusta, Countess of Lovelace, in 1844 can be found in chapter 1 of *Fundamental Algorithms* (Volume 1 of *The Art of Computer Programming*, second edition 1977) by D. E. Knuth:

"Many persons who are not conversant with mathematical studies imagine that because the business of Babbage's Analytical Engine is to give its results in numerical rotation, the nature of its processes must consequently be arithmetical and numerical, rather than algebraical and analytical."

"This is an error. The engine can arrange and combine its numerical quantities exactly as if they were letters or any other general symbols; and in fact it might bring out its results in algebraic rotation, were provision made accordingly."

ELLIS N. THOMAS
Camberley
Surrey

IN RESPONSE to Patrick Hall's letter (*Computer Weekly*, January 5) on the removal of funding from the MChape Project, I would like to take this opportunity to mention a Science and Engineering Research Council-funded project which began at Paisley in September 1983.

We are developing tools for Ada based on the York University compiler. Initially, work concentrated on the development of a system designed to conform as far as possible to the Stoneman requirements.

This consists of an enhanced interface to the Unix system to support use of qualified Ada identifiers as file names; arbitrary

named attributes for files; and transparent version control at directory level.

The full Unix toolset is retained, and a set of PDE specific tools are provided to assist with version control.

In the long term, it is hoped the system will be able to support the Common Apse Interface Set (CAIS) currently being specified. However, the system will remain, as far as possible, language independent.

This work was presented to the Ada UK conference at York in early January.

DAVID MACKAY
Research Assistant
Paisley College of Technology

IN Software File (*Computer Weekly*, January 5) George Black refers to the integration of various aspects of database technology in the US. It is a pity that he did not notice our press release in the autumn announcing our Anglo-Norwegian integrated database system, RD Quick.

This combines in a database application program generator management, report generation and word processing facilities for the Norsk Data superminis. It is planned to include graphical output within the same system during 1984.

TED BUTT

Reality systems (accept no substitute) are manufactured in Hemel Hempstead by Microdata UK Limited and in California by Microdata Corporation. Between us we have nearly 8,000 sites throughout the world.

After one show the Midland Computer Fair has already established itself as an outright winner. For only at the leading exhibition in the Midlands for microcomputers and related products, but it stands in its own right as a major national event.

In recognition of this, and the need to accommodate thousands of expected visitors the venue for the 1984 Midland Computer Fair is to be Britain's premier showplace - the National Exhibition Centre, Birmingham. The NEC, with its superb facilities for exhibitors and visitors alike will be the fitting site for the next event which attracted over 17,000 people for the first show.

Whether you are interested in microcomputer enthusiasts or would prefer to take space in the Business Section to meet small business micro users, the Midland Computer Fair is definitely for you.

So why not let a little of the Midland Computer Fair's success rub off on your company by reserving a stand at the next show.

The road to success starts by filling in the coupon below.

■ NEC Electronics (UK) has promoted two of its sales engineers and taken on a further three. At the Southern office at Reading, Alan Shaw has been promoted to consumer sales manager from senior sales engineer, and Dave Austin, previously a product sales engineer, is now a senior sales engineer. Don MacKenney joins NEC from RCA Picture Tube Division as sales engineer responsible for consumer sales. The Lutworth office sees two new sales engineers: Steve Georgieff will be responsible for sales in the North Midlands Region and Kelvin Lacey for telecomm sales. Bill Morton has been promoted to telecomm sales manager from senior sales engineer. Two promotions at the company's head office are Terry Banks to distribution manager from senior sales engineer in the distribution department and Jim Lillie, a former product sales engineer, has become senior sales engineer.

■ Prime Computer (UK) Limited has appointed Peter Kite as marketing manager for manufacturing and CAD/CAM. He joined Prime as a member of CompuData where he had been employed for three and a half years, predominantly as support manager for the plant design software, PDMS.

■ John Howe has been appointed divisional manager for Automated Controls and Systems (ACS), the newly-formed electronic product distribution subsidiary of Hy-Q Quartz Products. He was formerly marketing manager at Hy-Q.

■ Tech-Nel Data Products has appointed David Foley-Fisher (below) as UK sales manager, based at the company's head office at Banbury. Foley-Fisher joined Tech-Nel a year ago as a senior sales executive.

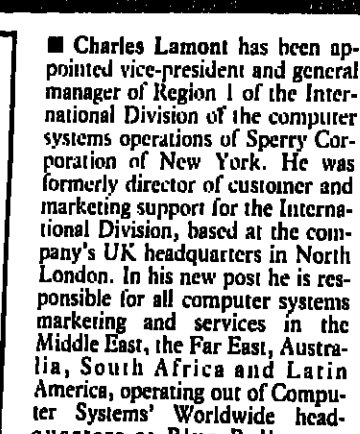

■ Harris Corporation announces the election of Jon E. Cornell to senior vice-president in charge of the company's semiconductor sector. He was formerly vice-president, group executive, of the semiconductor products group having joined Harris in 1968.

■ Fu Choo Cheng, a representative of Magnum Corporation, has joined the board of Phicom as an executive director.

■ John Chatterton (above) has joined Harris Systems as general manager of its Digital Telephone Systems Division in Slough. He was formerly worldwide sales and marketing manager for ICL's Network Business Division, responsible for LAN and PABX sales.

■ Paul Wyman has been promoted from personnel manager to group general manager, personnel and training for Datasolve, one of the companies in the Information Technology Division of Thorn-EMI. He is also appointed to the Datasolve operational management board. Wyman is chairman of Personnel Managers Common Interest Group, Computing Services Association. He joined Datasolve in 1979, and previously was with BOC.

■ Charles Lamont has been appointed vice-president and general manager of Region 1 of the International Division of the computer systems operations of Sperry Corporation of New York. He was formerly director of customer and marketing support for the International Division, based at the company's UK headquarters in North London. In his new post he is responsible for all computer systems marketing and services in the Middle East, the Far East, Australia, South Africa and Latin America, operating out of Computer Systems' Worldwide headquarters at Blue Bell, near Philadelphia. A Scot, he joined Sperry in 1962.

■ Denis Moran has joined Rand Information Systems, the Kingston-upon-Thames based software house. He has been recruited from management consultancy in the City to head RISL's Financial Consultancy Unit, with responsibility for developing software products and services in insurance, electronic banking and office automation.

■ Alan Norman has joined the marketing communications department of Nixdorf Computer, from Myriad A V Sales, where he co-ordinated the marketing for the company's distribution of microcomputer systems throughout Europe.

■ Nick Hollis (above) has been appointed managing director of Computer Peripherals (Systems), the exclusive UK distributor for the Telex Corporation's range of IBM 3270 compatible terminals. Eric Lipscombe, former managing director of CPS, becomes executive chairman for Computer Peripherals, the holding company for Computer Peripherals (Systems), European Marketing Consultants, and Tridemac, a rentals company. Hollis joins CPS after 18 years with BASF. He helped to form BASF's computer division in the UK in the late 1960s and held various management positions until being appointed divisional manager, which happened in 1979.

Statistical machines pioneer dies

THE Bull Group has learned with regret of the death of Knut Andreas Knutsen, aged 95.

Knutsen, who took over the development and manufacture of the first statistical machine invented by his friend Fredrik Rosing Bull when Bull died in 1925, was born in Oslo. He started his career in Norway, then moved to Switzerland and later to France, where in 1931, he was appointed chief engineer in charge of research and production with Compagnie Bull.

In 1933, when, with the help of Knutsen, Compagnie Bull was granted the right to use F. R. Bull's patents, the company changed its name to Compagnie Des Machines Bull. Knutsen was then named, from 1933 to 1964, director of patents and member of the board.

■ The death is also announced of Eric Wood, commercial director of Amstar (UK). He was 57.

■ Responsible for helping to ensure that Micro Focus products continue to meet all the GSA requirements is Kevin Staines (left) who has been appointed quality assurance technical assistant. He is working on Level II Color compilers and code generators. Bringing experience in office automation to his new sales support role is Stephen Ashton (right) who has worked for NCR for 15 years. Staines and Ashton will be at Micro Focus' new 25,000 sq ft offices in Newbury.

■ Chris Henderson has joined Rediffusion Computers as Northern dealer manager in the teleprinter marketing group and will be based in Manchester. Previously he worked as a sales executive for 18 months at Houdis Computing and before that was with Aset as a sales executive for two years.

■ Data General has appointed Roger Green as senior sales executive with responsibility for Granplan, Tayside and the Highlands and Islands, a new position within the company. Prior to joining Data General, he was with Mohawk Data Systems, responsible for the Scottish sales area, and General Electric of America which he joined in 1967.

■ Addie Berman (below) has been appointed sales and marketing manager of Euroco Computer Services. Previously with McCormack and Dodge, he introduced financial application software to the corporation's major European markets.

■ Sphinx, the software marketing company specialising in Unix related products, has appointed Joe Molloy (above) to lead its Network Products Division. He will be working with Andy Hall, technical support specialist, and Ian Back, who will specialise in the salesforce. Molloy joins Sphinx from T-Bar International (Europe) where he was European sales manager for products ranging from IBM-compatible channel switching to data communication network control equipment.

■ A product manager has been appointed for Cartwright Brice's Computer Supplies Division. Walter Freeman was previously buyer for National Computer Supplies. He is also a former sales manager for Wespac.

■ Dupont Computer Services has appointed a financial modelling specialist to market Finplan direct to large customers and to establish dealer network throughout the UK. Peter Judson has joined the company from Comshare where he was Midlands systems implementation manager.

COMPANY PROFILE

Since 1980, when profits were slumping and the rate of revenue growth slipping, Burroughs Corporation has begun to live again.

The change has been so dramatic that employees speak of the

"new" and "old" Burroughs, almost as though they were separate companies.

This revitalisation has happened since the appointment of Michael Blumenthal as chairman. His policy has been to

prune away all of the company's weaker branches while nurturing the stronger, healthier arms.

He capitalised where the company was strong - in areas like CPU development and manufac-

ture - but wrote off \$125 million worth of obsolete products, and didn't hesitate to buy in better people and technology from outside the company when he thought it was necessary to do so.

John Riley examines the changes that Blumenthal has initiated, in service, support and in market direction, and then takes a detailed look at the company's future throughout the rest of the '80s

Burroughs climbs out of the doldrums and breathes again

MICHAEL BLUMENTHAL, Secretary to the Treasury under the Carter administration, likes to joke that the recession in the US first began when he left the government.

Whatever the connection might have been, his appointment in September 1980 as chairman of Burroughs Corporation certainly signalled a revival of the company's fortunes.

Burroughs Corporation was founded in 1886 by William Burroughs in St Louis, Missouri, to make adding machines. A long-time IBM rival, it moved into the nascent computer industry, adding computers to its traditional business equipment products.

By 1979 its overall financial performance was second only to that of IBM - but was a large order of magnitude lower.

Throughout the 1970s, Burroughs enjoyed a 15% annual growth in revenue and a 20% growth in profit. The company's main strength was generally recognised by customers and competitors alike as being in its technically advanced medium and large computers, and it had a significant user base, particularly in the financial community.

But during the second half of the 1970s the clouds started to gather and there were clear signs that the company was losing its direction. It was not responding effectively to the demands in the market place brought about by rapidly changing technology and the fast-expanding customer base.

The most persistent and potentially damaging criticism, which

gained strength from 1976 onwards, was the company's reputation for poor systems and engineering support.

There was also a wide range of other consistent criticisms, including an inward-looking management, inadequate testing of

The company has become primarily market-driven

products and poor peripheral performance.

The catalyst that jolted the company into re-assessing its strategy - and appointing Blumenthal as chairman and chief executive in 1980 - was the slump in profits and in the rate of revenue growth.

In 1980, the revenue of \$2,902 million was only 2.5% up on the previous year, compared with the earlier 15% annual growth. At the same time, profits dropped from \$306 million in 1979 to \$82 million in 1980.

Blumenthal capitalised on areas

where Burroughs was strong, particularly CPU development and manufacture, but vigorously pruned those in which it was weak. For example, by December 1980, he had written off \$125 million worth of obsolete products.

He has maintained that ability to cut his losses: as recently as April last year, Burroughs dropped plans to produce a laser storage system after five years and \$20 million worth of development.

The idea that Burroughs should try to cover all computer-related areas on its own was also scotched, and Blumenthal has bought in both people and technology when he considered they were superior to what he could find within the company.

Aided by an early retirement programme, which he introduced, Blumenthal filled 20 of the top 25 company positions with people from outside the company during his first 18 months. His choice of staff reflected his emphasis on the importance of strategic planning, quality control and systems and engineering support.

The "new" Burroughs (as it is referred to within the company) is acutely conscious of its poor reputation for support in the 1970s. "We shall set our goals to achieve total customer satisfaction, and to deliver error-free, competitive products on time, with service second to none," was Blumenthal's statement of quality policy.

That policy has crystallised into organisations aimed at breaking through potential bottlenecks in customer support, such as resource control centres and techni-

BLUMENTHAL... Has maintained his ability to cut his losses.

cal resource centres.

"Blumenthal has been a corporate tonic," says Iain Davidson, Burroughs' UK general manager of marketing, who remembers the "old" Burroughs with its "long line of home-grown and perhaps too introverted corporate management".

Although Burroughs employees now contrast the "old" and "new" Burroughs, they are aware that many of the elements of the "new" were present in the "old". Blumenthal highlighted and developed them.

An example of this is that just before Blumenthal took up his position in 1980, Burroughs took over the software company Systems Development Corporation, which subsequently designed an electronic filing cabinet called Records Manager.

Blumenthal has followed up that approach of buying in technology where he has identified weaknesses in Burroughs' product line.

In December 1981 he took over an ailing Memorex to boost Burroughs' peripherals and disc drives capacity. Important fruits of that takeover were launched this time last year in the large capacity disc drives to go with the six mips B7900 top of range mainframe.

"The reputation of Burroughs for having innovative processor designs was unfortunately coupled with our rather lack-lustre peripheral performance," Davidson reflected.

"Overnight, the synergy with Memorex gave us the volume production to survive in the '80s, with state-of-the-art peripheral products."

"We no longer try to do everything ourselves and we are prepared to make strategic acquisitions where they fit a long-term strategy," he added.

Blumenthal has also made deals with third party companies to take advantage of their technology. In October 1981, Burroughs signed an OEM deal with the Californian

company, Convergent Technologies, and gained 85% of Convergent's output of 16-bit microcomputers - its B20 range - together with a seat on its board and manufacturing rights.

More recently, in August 1983, Burroughs announced a £21 million deal with the Scottish-based banking and financial computer terminal manufacturer, Fortronic.

Line, which Burroughs chain-reduces systems development time by 90%, was developed by two independent New Zealanders, and Burroughs' New Zealand subsidiary started marketing it there in 1978.

In the early 1980s, there were signs that non-Antipodean Burroughs users were becoming impatient waiting for an applications generator from Burroughs. But during that time Line was being extensively evaluated so that since 1982 it has become a cornerstone in Burroughs' systems offerings.

Under the "new" Burroughs there have been moves to formalise procedures to make it easier for software houses to produce applications software. For example, in the UK in November 1982, Burroughs set up its Application Program Exchange (APEX) scheme whereby the company markets packages produced by third parties for agreed royalties.

There are currently about 30-40 software houses writing applications packages for Burroughs in the UK, in addition to its own

■ Continued on page 24

Burroughs once boasted that it was the UK's oldest computer company. It still is, but now the company emphasises other qualities. The fourth of Computer Weekly's company profiles puts the spotlight on Burroughs. NCR will be the subject of our next profile on February 6.

It will speak to anyone.

COMPANY PROFILE

Burroughs no longer promotes itself as a computer manufacturer shifting boxes of electronics but pushes the image of a gigantic systems house. And most of its systems applications software is ware from other suppliers.

It is also setting up computer business centres and selling machines through third parties in an effort to muscle in on markets dominated by big minicomputer and micro manufacturers.

John Kavanagh examines these trends and takes a detailed look at the third-party software packages

How third parties fill software holes

IN 1982 Burroughs' US headquarters recruited a doctor into a top marketing job. Chairman Michael Blumenthal lists this as one of the significant events of the year in his last annual report, because it highlights Burroughs' move into selling packaged systems to specialist industries.

Movement towards sharply defined markets and selling through third parties are part of

what the company calls the new Burroughs. Blumenthal gave the company an urgently-needed shake-up when he arrived in 1981 but behind the scenes Jerry Jacobson, head of strategic planning, was looking outside the company for new ways of acquiring and selling products. As UK general marketing manager (in Davidson puts it: "We no longer try to do everything ourselves."

Davidson says the UK subsidiary has adopted the new Burroughs philosophy more enthusiastically than any other. As far as selling its computers directly to users is concerned, it is concentrating on six markets, or lines of business: manufacturing, distribution and wholesale, finance and insurance, the construction industry, the legal profession and government and public services.

"There's not a single UK salesman without a line-of-business job title," says UK line-of-business marketing manager Tony Holden. "It's been a painful move: we've had to tell successful hardware salesmen to put aside what they know and extend their range and take on extra staff with no computing or sales experience. "Now the focus is switching from dealing with the data processing manager, who is looking for a technical solution, to the financial director, the production manager and so on."

"Users are demanding user solutions. We need to understand the customer's business and advise on business solutions rather than computing solutions."

Existing staff have been retrained and specialists in the target markets have been taken on. A recent Burroughs job advertisement called for eight years' experience in distribution and added that computing and sales experience were not essential. "We're asking specialists to come and help us recognise opportunities," says Holden.

Burroughs points out that as hardware margins continue to be eroded, growth must come in

training its own staff and supporting users. With more complex products the software supplied to the customer training. In all cases the user signs a sales contract with the software firm.

Holden insists there is no competition between Burroughs' products and third party suppliers. "We have opened up our plans to software houses, shown them where we have gaps and targets and then invited them to fill those gaps," he says.

As a result, over half Burroughs' packages come from Apex agreements. Companies taking part in the scheme include the production control (and ICL) specialists, Safe Computing. The company supplies its Microsafe package for the B20 microcomputer which Burroughs buys from Convergent Technologies.

Burroughs took on 25 firms in 1983 and expects to have 70 or 80 in the UK by the end of this year. It aims to do between 25% and 30% of its entire UK business through these firms in four years time.

To put that in perspective, ICL expects 15% of its business to come from third parties by 1985, while minicomputer giant Digital Equipment, which has always been in this market, gets 45% of its income in this way.

Meanwhile, Burroughs is setting up its own computer business centres. They, too, will cover microcomputer and minicomputer sales and support small users. Seven centres will be set up in the UK this year.

"In the 70s we had 40 UK branches, but such a big operation is no longer economic," said Graham Margetson, head of the business centres and the independent sales organisation (ISO) scheme.

Margetson is certain that Burroughs can avoid clashes between the third parties and its own sales people, a problem Digital Equipment struggled with during most of 1982 and 1983.

Half the ISOs are selling other companies' equipment as well as Burroughs', but Margetson says there are no clashes here, either the Burroughs products fit into gaps in their ranges.

The other half are already Burroughs software firms, and these companies welcome the scheme.

"Previously, we were mainly introduced to customers by Burroughs," says Alan Sparks, managing director of QRF Computer Group, one of the biggest Burroughs software houses. "This gives us independence. We can find our own business without having Burroughs tell us what we can and can't work on."

"We haven't always agreed on the best way of developing an account - and Burroughs was the senior partner. Now we can control that account and provide everything: equipment, software, training and so on."

DAVIDSON... "We no longer try to do everything ourselves."

"We have opened up our plans to software houses, shown them where we have gaps and targets and invited them to fill those gaps."

creatively from such services. In the shorter term, Holden says the new systems approach has cut the cost of making each sale, because sales and development resources are concentrated on markets which the company knows give it a good return, rather than scattered over all possible markets. For example Burroughs now puts little effort into the retail market, where it has no traditional strengths.

In 1982, Burroughs had only a handful of software packages for its target areas. But in the last year, the product range has filled out considerably and there are now packages for most of the markets available on most Burroughs processors.

Holden says the shortfall has been made up by internal use of the company's Linc program generator, plus the introduction of the Apex (application program exchange) scheme. This involves Burroughs selling packages from software firms.

In some cases, Burroughs takes full responsibility for the package,

COMPANY PROFILE

System compatibility is the order of the day as the new Burroughs prepares to rationalise its product line for the 80s. "We are in the business of selling solutions to problems rather than machines," claims man-

ager of product marketing, Bob Walker, "and that doesn't mean tying customers to one product line."

The company's computers are segregated into four distinct groups, starting with the B20

microcomputer and rising in power to the latest B7900 multi-processor. Recent enhancements to the top end of the range and entry level mainframes are designed to allow greater flexibility for users to upgrade

without having to abandon existing systems using compatible operating systems and communications protocols.

This extends to having a CMS (computer management system) cross-over version of the B900

office system at the top of its segment, enabling users to upgrade to an entry level B1900 small business system without rewriting software immediately, or changing peripherals. Keith Holder investigates

Solutions to problems is product aim

BURROUGHS is taking an IBM-style approach to some segments of its product line, and plans "strategic purchases" of companies and equipment, particularly for the microcomputer and peripherals sectors. The first example of this is the purchase of Memorex.

This plugged the gap in Burroughs' disc storage devices, seen by industry observers as a weakness, without costly development programmes.

Brian Walker, product manager, peripherals, said the Memorex kit would be used mainly with large-scale systems.

Starting at the micro end, there is the B20. The machine is built around the 8086 processor and is designed to operate as either a standalone unit or part of a distributed system. In the latter case, it has advantages over systems using a central processor attached to dumb terminals because each operator has access to processing power which can be used independently according to Trevor Westoby, product manager for this line.

In such a system, one B20 would act as a host for peripherals. It uses the Burroughs BTOS operating system, but plans are already at the advanced stage to offer CP/M and MS-DOS as well. Westoby said that BTOS has been designed to

offer specific advantages to users, allowing different configurations, such as filing systems and communications, to be set up as key-stroke options.

Basic, Cobol, Fortran and Pascal will all run on the machine and the company's X-25 interface allows networking. Linking with IBM and Burroughs mainframe computers, with the ability to download data and programs, is possible. Memory starts at 0.5 KByte and is expandable to 512 KBytes using an auxiliary hard disc subsystem.

Westoby maintains that a lot of planning went into making the machine easy to use, not just with applications packages but also for setting up routines. Prices for standalone units start around £3,000. For distributed systems the cost per workstation is around £2,500, allowing for three MBytes of spooled memory.

It is not until the next step up, to the small business systems range covered by the B95, 96 and 930, that the option to progress upward in a structured way begins to emerge.

At entry level, the B95 uses the NBDS processor common to all other products which uses the computer management system (CMS) operating system/applications software package, through

the master control program (MCP) operating systems, which allows high-level languages to be used for portability of applications programs.

It will support from two to six terminals and comprises three modules housing the processor, data communications lines, disc subsystems and power supply. Up to five communications lines are provided, which include options for AIM devices, distributed control and SNA interfaces.

Main memory is 64 Kbit RAM, expandable to 512 KBytes, with up to 25.4 Mbytes from two disc subsystems. Two system printers can be supported, ranging from a daisy wheel model to a wide line printer, with a speed up to 500 lines per minute.

The MCP system provides two-way communication with the system available in most local languages. One of the main benefits claimed for this system is the ability to execute multiple programs simultaneously and run programs larger than the available memory size using a virtual memory system.

It also maintains an inventory of system resources. Using CMS, automatic execution of pre-defined sequences of commands and repetitive programs is said to be possible.

The next step up is the B96, which as the B95's big brother, expands the number of terminals supported to 20 together with increases in memory and printer options. Three versions are available which again use MCP and CMS.

The 96-20 supports one disc storage subsystem, while the 96-40 and 96-80 support two. These are all fixed discs with capacities from 4.6 to 77.2 MBytes. In addition,

HUNT... "The computer management system lacks the sophistication of higher operating systems."

the B9498 high-speed tape drive can be used for data file back-up or applications processing.

Although the system is still limited to two printers, the range now includes letter quality, text

claims that apart from increasing system flexibility, this allows processor redundancy, and hence a high degree of system reliability.

It is capable of supporting 32 communications channels, over 1,700 MBytes of fixed disc storage and 520 MBytes of removable disc rack. It also features the CP9580 communications extension and can be used as a network device. In this manner, up to 400 terminals have been run on one customer installation.

With the whole of this series, the benefit most stressed by the company is the ability to run CMS. This is an integrated system of operating and application software which allows users a logical upgrade path to the next level of machines, the B1000 range.

Programs can be run in either CMS or native B1000 mode concurrently, so that once a user has decided to upgrade, he can continue running old programs until they have all been converted from CMS.

Product manager, networking, David Hunt said that this feature was intended to provide an initial changeover option and CMS lacked the sophistication of higher operating systems used on larger mainframes. It does provide online programming facilities for Cobol, MPL-11, NDL and RPG 11, through the command and edit

language (Cande) and RPG-Edit.

The B1000 series not only shares CMS commonality with the smaller systems but is also the first level at which the logic and information network compiler (Line) applications development system is available. This spans the rest of Burroughs' processors, including the B7900, and provides a complete DMS-11 relational database design with report and enquiry facilities.

The range is based on what Burroughs describe as fourth generation processor design. All run under the master control program/translation control system MCP/TCS-IV which consists of MCP-11, Sort, Utilities, network definition language (NDL), a data management system DMS-11, online data entry and Cande.

Last year saw some enhancements to the software for the system, but these only apply to the latest versions of the B1800 and 1900.

The B1955 has the option of the CM 1900 TCS operating system for better communications handling. All versions support Cobol '75, Fortran '77 RPG and interactive basic compilers, and conversion aids for emulation, translation and interpreting. Program compatibility is maintained throughout the range.

It is not until the small business systems range that the option to progress upward in a structured way begins to emerge

and 650 line per minute line printers.

The B930, at the top of the range offers the same package but uses up to eight high-speed (three MHz) processors, Burroughs

Personal Computers from Fujitsu. Japan's Leading Computer Manufacturer.

Think of microtechnology and you think of Japan. The undisputed leaders and innovators. The home of virtually every world-famous name in the field.

At the heart of all microtechnology is the computer. And Japan's leading computer manufacturer is Fujitsu. We make everything from one-chip micros to large-scale systems.

Now, Fujitsu are launching their personal computers in Britain. And because we manufacture all our components ourselves, we can offer superb personal and business systems at competitive prices.

We are making a long term commitment in Britain. And we're looking for dealers. Dealers who are experienced and well supported. Dealers who wish to make a long term commitment for a solid future.

We're going right to the top. Make sure you're there with us.

FUJITSU MICROELEKTRONIK, Curlew Road, Thames Street, Windsor, Berkshire SL1 1SN. Telephone number 07535 50531

If you're a microcomputer system builder, you're about to make a crucial choice.

Open vs Closed

In the interest of helping you decide which microcomputer would be best for your next system, Intel presents the solution.

An 'Open System', who needs it?

If you're a system builder, you probably do. After all why should you be trapped by performance limitations of inflexible, inaccessible black boxes (Closed Systems). Systems that will probably be out-of-date by the time you ship your system anyway.

A world leader in VLSI technology, Intel has taken the lid off its microcomputer, creating the 'Open System'. Which means open to future VLSI; to customisation; to third party hardware and software; and to integration at any level.

Avoid the generation gap.

Your customers expect you to use the latest technology. With a Closed System when new technology comes along, you either have to change systems, change vendors, or make excuses. It happens frequently because microtechnology changes more and more rapidly. Nobody understands that better than Intel.

As a result, Intel's 'Open System' approach means that when tomorrow's VLSI technology comes along you'll be in a position to apply it directly. In particular, this can be critical with the

coming advances in processor power, graphics and data communications capability.

Tailor the hardware to the job.

It's practically impossible with a 'Closed System'. The manufacturers discourage it by making everything special, non-standard and proprietary. The 'Open System' on the other hand presents no barriers. Intel publishes its hardware and software interfaces. Increasing your options for using third party hardware and software enormously. And if you need special interfaces designed, you can get them from Intel or third parties. Or you can design your own. If you do, we'll help you.

Build to international standards.

Your options are further increased because Intel builds to international standards. For example, Intel's 'Open Systems' use the internationally accepted 'Multibus' standard. That's not surprising since Intel invented it - an independently published *Multibus Buyer's Guide* lists over a thousand 'Multibus' compatible interfaces from 200 companies*.

For software an equally wide choice exists. The *Intel Yellow Pages* includes over 250 companies and more than 2000 solutions.

software products and technical services that support Intel architecture.

You certainly can't with a 'Closed System'. However, Intel understands that companies have different needs and they change during the product's life cycle. For most, it's advantageous to start by buying complete microcomputers and

at a later date, perhaps, consider doing the assembly themselves. And if you do, we'll help you.

Today the best arguments must also appeal to the pocketbook. So before you decide between 'Open' and 'Closed' be sure to look at the CLINCHER.

System 310 is fully supported by Intel's product service for hardware and software, and Intel's system engineering will provide all the development help you need.

THE DECISION IS CRUCIAL.

Call Andy Smith at ext. 3807 (0793) 488388 or write to Intel Corporation (UK) Ltd., Systems Sales, Pipers Way, Swindon, Wilts SN3 1RJ.

And we'll send you further information to help you along.

The Clincher.

A powerful microcomputer system starting at £4049*

It's probably the best argument yet for the 'Open System' concept. Intel's System 310 incorporates the latest VLSI technology. And yet it's priced to compete with 'Closed Systems'.

Well suited to a wide range of multi-user applications, it features two operating systems. iRMX86 is a modular real time multitasking operating system. And Xenix is a fully licensed derivative of UNIX version 7 plus a powerful set of commercial enhancements designed for the OEM.

Of course, System 310 is fully compatible with the soon to be released system based on the iAPX 286, the highest performance microprocessor on the market.

	System 86/310-1	System 86/310-2	System 86/310-3

COMPUTERS IN ITALY
If you are considering starting up a computer company in Italy, either hardware or software, or simply want to extend your existing organisation by increasing sales, then we are in an excellent position to help. Our experienced staff has a first-class knowledge of the Italian market and how to increase the profitability of your operation.
Our service will be of special interest to companies wishing to market software at both large mainframe and micro levels.

Burroughs learns how to live once more

From page 15

applications software development centre at Feltham, Middlesex, which employs 200 staff.

Under Blumenthal, Burroughs has set about trying to re-assess its dominance in the small systems market with the launch in 1982 of its 16-bit Intel 8088-based B20 range of microcomputers, developed by Convergent Technology.

Burroughs' co-ordinated push back into the small systems market in the US has been bumpy. There was a major change in its US marketing strategy in mid-1983.

In the US Burroughs had a two-tier distribution structure, selling to about 80 distributors which then built up a network of dealers. Last summer, Burroughs decided to drop most of its B20 distributors in the US and sign up dealers directly, saying the distributors had failed to meet their quotas.

According to US reports, US distributors blamed uncompetitive pricing, delayed product enhancements - particularly MS-DOS and CP/M capabilities - as well as unfair competition from Burroughs' own direct sales force.

Blumenthal's success in turning the company around is reflected in the company figures, with total revenues rising 17.5% to \$3,405 million in 1981 and again by 22.9% to \$4,186 million in 1982. Net profit has fluctuated from \$82 million in 1980 to \$149 million in 1981, but to \$117 million in 1982.

Burroughs is holding its own compared with the rest of the "Bunch", the unflattering term for the second division (after IBM) of traditional mainframe vendors: Burroughs, Univac (now Sperry), NCR, Control Data and Honeywell.

Looking at 1982 total revenues, but excluding revenue from interest, a *Businessweek* survey last summer placed Burroughs fourth out of the five with over \$4 billion in revenues, the highest being Sperry with \$5,571 million and the lowest, NCR with \$3,526 million. Burroughs had the largest percentage increase in revenues compared with 1981, but also the biggest percentage drop in profits of the Bunch.

Gartner Group's review of the top 30 US data processing companies for 1982, which looked purely at I/P revenues, put Burroughs at No 3 and best of the Bunch, but behind Digital Equipment and IBM. The *Financial Times* list of Europe's top 25 computer manufacturers saw Burroughs climb from 10th to seventh place in 1982 with European data

processing revenues up 30.7% to \$970 million.

However, on the research and development side, although Burroughs boosted its R&D budget in 1982 by 24.8% to \$220.6 million, that sum accounted for only about 5.4% of revenue, according to *Businessweek*. In comparison, Honeywell, NCR and Sperry each invested about 7.1% of their sales revenues in R&D.

The share price fell steadily from a high of \$87½ during the first quarter of 1980 to its lowest point in years of \$27½ in the fourth quarter of 1981. It climbed back to \$49 a share in the fourth quarter of 1982 and is currently hovering around the \$50 mark.

Blumenthal now has accomplished a change of direction for the company and significantly raised the morale and motivation of his workforce without having previously been in the computer industry. Before joining the Carter administration he had headed washing machine company Bendix.

But it caused no little surprise when, in August 1982, Burroughs appointed Bob King, formerly chief executive of Scottish and Newcastle Breweries, as managing director of its UK subsidiary, Burroughs Machines.

In the same month King was joined by David O'Brien, who had been UK managing director of Cray Research from 1979.

King is convinced that Burroughs is committed to the UK. "The company at the highest level wants to continue here, and that is why I'm here," he said soon after his appointment. "I would not be here if I did not believe in the company or that it is committed to the UK."

Burroughs' UK subsidiary has better claims than most US subsidiaries to be considered British. Its first manufacturing plant was opened in Nottingham in the last century - in 1898 - and it now has five manufacturing plants.

Burroughs' B90 small business minicomputer system was developed here and is manufactured at Cumbernauld in Scotland. The company claims that all the Burroughs equipment sold in the UK is either manufactured in the UK or the cost of it is covered by the value of equipment exported by the company. In 1982 Burroughs exported £53 million worth of goods from the UK.

In terms of size and manpower employed by Burroughs, 1980 was the peak year in the UK. There were 3,000 staff involved in manufacturing and 2,000 in marketing and support. There were also eight

manufacturing plants occupying 1.2 million square feet.

Now there are five manufacturing plants, around 2,000 staff involved in manufacture, and manufacturing area totals 867,000 square feet (including an extra 100,000 square feet at Livingston, announced last year).

The main factories are at Cumbernauld, Dumbartonshire, and Livingston in West Lothian. The former makes small computer systems, encoding equipment and printers and is taking over the manufacture of disc drives and cassettes previously made at its Glenrothes plant, which was one of those closed. The Livingston plant manufactures encoder systems for banking and financial institutions.

In addition to the manufacturing plants, Burroughs' software development centre at Feltham has expanded from 77 staff to 200 since 1980.

The Burroughs that King and O'Brien joined in August 1982 was beset by litigation. Customer dissatisfaction was such that 150 companies had taken out lawsuits against Burroughs by that time, mainly involving its B80 and B900 small computers.

On top of the quarrels with its users, Burroughs was also locked

KING... Keeping quiet about plans for digital communications switching.

government procurement policy as long as it's clear what it is," said O'Brien.

Very soon after his appointment, however, Burroughs quietly dropped the case after a top level meeting between Blumenthal, King, the Information Technology Minister Kenneth Baker and Sir Peter Cary, Permanent Secretary at the Department of Industry.

Assurances were given to the company that public sector contracts would be awarded in future according to EEC and GATT (General Agreement on Trade and Tariffs) rules on open tenders.

That case also resulted in a shift of policy at Burroughs, away from direct frontal assaults on the public sector. "We are now aiming primarily at independent institutions that rely on government influence and support rather than on central government," said O'Brien.

In the public sector, therefore, Burroughs has aimed at institutions such as magistrates courts and the police. The Police National Computer at Hendon comprises four 7000 series Burroughs mainframes.

King and O'Brien took steps to build up Burroughs' asset base in the UK and to rebuild customer confidence.

King concentrated initially on "gaining financial standing and strength".

"In the old days," he says, "computer companies didn't worry about having a sound financial base, but it is important to have a sound asset base. With it there is no way we'll vanish."

Burroughs' assets in the UK are now over £100 million, and King added that company borrowings

were now lower than two or three years ago.

Burroughs has given a lot of attention to promoting customer confidence, particularly through customer support and service, the two areas which generated the bulk of complaints.

"Eighteen months ago there were lots of letters from customers expressing concern," says King. "We only get a few letters now. Of course, we haven't solved all the problems, but there has been a dramatic improvement."

The lynchpin of that turnaround has been Burroughs' new real time fault monitoring systems, called Resource Control Centres which are designed to provide rapid and effective response to customers with problems.

The programme started in 1982 and there are now 30 such centres worldwide.

"Resource Control Centres are not just buildings with a computer to log calls," said Peter Lovender, general manager for post-installation service. "They are management alert systems and management information systems."

Lovender explained that users with problems have just one telephone number to contact the whole support organisation. On receiving the user's call, the Customer Service Engineering organisation takes on the problem. It is linked to the Resource Control Centres for advice - and, if the problem is complex, a series of alerts is sounded so that, if necessary, the problem can be dealt with on the other side of the Atlantic.

Being online also enables Burroughs to keep track of average response times. The number of responses made in under four hours has, according to Lovender, increased from 60% in 1981 to 67% in 1982 to 75% in 1983. And the average response times for mainframe users (B1000-B7000 series machines) decreased from 1.8 hours in 1982 to 1.3 hours in 1983.

Response times for microcomputer users with problems (B80 and B900 machines) decreased from 3.3 hours to 3.0 hours over the same period.

Another support function set up in the UK in 1983 was Burroughs' Technical Resource Centre, set up at the cost of £2 million at Milton Keynes. That organisation, opened last October, aims at streamlining the supply of parts.

"Having arrived on time with the help of the Resource Control Centres, we need to fix the problem on time," said Lovender. "The sure that our field operation is underpinned with centralised logistical support."

"Burroughs is keeping up the emphasis on support organisations this year with a new Field Support Group, due to become operational in July. That group will give product support for systems and environmental software and will give special support for new products

until that support is developed into the Resource Control Centres.

In addition to the major push to extend support and service operations, Burroughs in the UK has also set up two organisations to add into the small business systems and micro markets: the Independent Sales Organisation (ISO) and the Computer Business Centres.

Last April Burroughs set up its Independent Sales Organisation. These are third party OEMs which sign up with Burroughs to all value to small systems intended to small business not catered for by Burroughs' direct salesforce.

"There were 25 ISOs by the end of 1983 and Graham Morgan, general manager of sales and marketing for both organisations, expects there to be 70 or 80 by the end of 1984."

"Independent Sales Organisations are not dealers," said Morgan. "They open the box and add value. ISOs have backgrounds in vertical markets and plug gaps that we don't cover. Because they add value, they avoid clashes with the Burroughs direct salesforce."

The Computer Business Centres, seven of which are being opened this year, will form Burroughs' other prong in its effort to regain the small business market. Small businessmen will be able to attend centres to learn about computers and talk to a cross-section of Burroughs staff with more emphasis on communicating with support staff.

The first six centres will be in Manchester, Leeds, Birmingham, Bristol and London (where there are to be two), with a further centre to follow in Glasgow.

Another plank in Burroughs' small business strategy will be an £11 million Education Centre which will open in April at Milton Keynes. The Education Centre will be headed by the ex-director general of army transport, and former assistant commandant at Sandhurst, Major General William Allen. It will train third party marketing personnel responsible for selling Burroughs systems through ISOs.

What of the future? King is keeping quiet about Burroughs' plans for digital communications switching, although last year there were extensive talks between Burroughs and Plessey.

O'Brien emphasised the importance of networking in Burroughs' future strategy. "We now have a philosophy of offering solutions that can co-exist with other manufacturers' solutions," he said. "That is why we are developing networking compatibility and why we are very active on standards committees."

Using the analogy of the captain of a giant oil tanker changing his ship's direction, Blumenthal's course correction initiated in late 1980 has worked its way through the corporation so that now in 1984 Burroughs feels that it is pointing away from the shallows and is firmly on course for the rest of the '80s.

PEOPLE

■ CPU Peripherals is expanding its sales management team by adding two new product managers. In charge of the Maxwell Magnetic media range of products comes John Haselden (right), formerly a sales manager with Stralfort. With product sales responsibility for printers is David Steadman (left) who comes from a sales management position at Comtronics. Both will develop the dual dealer/OEM marketing opportunities. A promotion completes the changes: salesman Simon Howarth takes over the Western OEM sales region on the Haselden/Espirit range of VDUs. Shugart disc drives and DEI tape drives continue to be the domain of product manager Richard Watts.

■ Megabyte, the Horsforth-based computer systems company, has appointed Barry Seaman as sales manager, mini systems. Previously he worked for Data Sciences International of Leeds for 11 years. Len Cheah has been promoted to chief programmer. He joined Megabyte in 1981 and will now be supervising 20 programming staff.

■ David F. Thorpe has been appointed sales manager of Micromos Systems, a member of the Telemetrix Group. Thorpe will be responsible for all marketing and sales activities for Report, the new, intelligent colour computer terminal launched at Compec. He will also be responsible for sales of the add-on graphics boards.

■ Rob Harris (above) has been appointed managing director of NDC International, the London-based subsidiary of National Data Corporation of Atlanta, Georgia. He joins NDC from Visa International, the payment systems organisation, where he was business development manager.

■ The continuing growth of Cifer and the initiation of a second manufacturing site means that the board is being expanded to allow Terry Cosgrove to concentrate on his role as managing director and chief executive. Oliver Newland, currently a non-executive director, has been appointed non-executive chairman of the company. At the same time Graeme Robinson, previously with ICF, is joining the board as full-time finance director on a 12-month assignment.

■ Graham Stallard has joined Rediffusion Computers as materials manager. Previously, Stallard worked as production controller at Sangamo Transducers.

■ Mark Robson (above) has joined WordNet International as marketing and support services director. He is a former communications manager at Wordplex, later becoming product marketing manager for communications with ABS. After a year in this post he joined Wang UK as networking manager for the full Wang product range.

Word Grammar and Modern

■ Rob Harris (above) has been appointed managing director of NDC International, the London-based subsidiary of National Data Corporation of Atlanta, Georgia. He joins NDC from Visa International, the payment systems organisation, where he was business development manager.

■ The continuing growth of Cifer and the initiation of a second manufacturing site means that the board is being expanded to allow Terry Cosgrove to concentrate on his role as managing director and chief executive. Oliver Newland, currently a non-executive director, has been appointed non-executive chairman of the company. At the same time Graeme Robinson, previously with ICF, is joining the board as full-time finance director on a 12-month assignment.

■ Graham Stallard has joined Rediffusion Computers as materials manager. Previously, Stallard worked as production controller at Sangamo Transducers.

■ Mark Robson (above) has joined WordNet International as marketing and support services director. He is a former communications manager at Wordplex, later becoming product marketing manager for communications with ABS. After a year in this post he joined Wang UK as networking manager for the full Wang product range.

■ Due to the success of its European operations, Megatek Inc is expanding its distributor network to venture outside the existing markets covered. As part of this plan, the European subsidiary based in Lausanne, Switzerland, is now taking on responsibility for all sales and marketing outside the US. Michel Schwab, who previously headed up Megatek in Europe, now assumes responsibility for the international operation, including sales in the Far East and South America.

■ Martin Orchard-Webb of Stroud, Gloucestershire, will soon be flying out to Fiji to take up a post as senior systems analyst and programmer with the Government of Fiji. He was recruited by the Crown Agents on behalf of the Overseas Development Administration under Britain's aid programme. Orchard-Webb went to Papua New Guinea to work for the government there for two years. Since 1980 he has been back in Stroud at the McEvoy Division of Smith International.

■ Ray Chance (left) has joined MSA to support the company's international payroll and personnel system. Previously he was systems consultant at Zedo Computer Systems, and senior business analyst at Owen Computer Services. Alan Searle (right) joins MSA as general ledger customer support consultant. He was project leader implementing the general ledger system at Roche Products.

■ Tony Sanders has been appointed sales operations manager of Golden Wonder and HP Foods. He was formerly O & M manager for both companies.

■ AIM Cambridge Limited, the TEK Group's technical consulting subsidiary, has appointed Roger Goscomb as electronics group leader.

■ Mike Evans (below) has joined Geac as divisional manager for general systems and communications products. He will be responsible for all sales and customer marketing of networking and communications products outside the existing product groups of libraries, retail banking, wholesale banking, leasing and insurance. He will also be responsible for all OEM sales of general systems. John Burton will be responsible for development and product marketing of communications products within Europe.

Just unleashed. The new 3205, the 32 bit Supermini that eats 16 bit micros alive.

From the Perkin-Elmer 32 bit specialists... a compact piece of computer engineering with a formidable processing capability. It's designed for the end user and the OEM, who like the price tags on 16 bit micros but is hungry for the red meat of a full 32 bit machine.

Move up when you are ready. Don't let either the price or the size delude you. The 3205 has a true 32 bit architecture with the growth potential and the total upward compatibility that is key to the Perkin-Elmer Family. There's a choice of hardware and software packages with Perkin-Elmer 32-bit UNIX[®] and Reliance Plus the acclaimed Perkin-Elmer relational database. A complete system with 512K memory and 50MB disk starts at under £20,000. For the OEM and system integrator the CPU and memory can be as low as £2,460.

OEM's. Come and hunt with us. The 3205 provides a great opportunity for OEMs and system builders in opening up a rich territory of new specific application

areas where 16 bit micros just can't compete. In the Perkin-Elmer Partnership Plan we'll supply you with marketing back up, training, software and hardware advice. We'll actually feed through sales leads exclusively to you. Because we need your help in exploiting a major business opportunity for both of us.

Systems Support Analyst

City

Our client is the holding company of a number of operating subsidiaries which together form an integrated group engaged in oil and gas exploration and production and in the refining, transportation and marketing of crude oil and petroleum products.

The initial responsibilities of the Systems Support Analyst will be to write user manuals and training material for a sales order processing system and assist in the development and implementation of an accounting package.

This is a user oriented position and the successful candidate must possess excellent communication skills as well as good

£10,000 - 12,000

planning and organisational ability. A sound knowledge of DP principles and concepts is essential and experience in Wang VS systems and telecommunications will be an advantage.

A good understanding of CPU to CPU remote networking would be an added advantage.

The successful candidate will be offered a salary relating to qualifications as well as a comprehensive benefits package.

Find out more - contact Knight on 01-491 4706 quoting Ref YY404.

COBOL Programmers

Bedford

Our client, a leading manufacturer of electrical control equipment, has recently upgraded its computer hardware to an IBM 4341 operating under DOS/VSE. This reflects the increased importance of information systems to the company. There is in place an integrated suite manufacturing and commercial systems based on DL/1 and CICS.

To help the next stages, which includes specific emphasis on a real time manufacturing control system, they require additional COBOL Programmers to join their existing project team. A knowledge of CICS and/or DL/1 would be a distinct advantage.

Attractive salaries are envisaged based on knowledge and experience and will be well in line with market rates. The company

benefits include Superannuation and Life Assurance scheme, social and sports facilities and five weeks annual holiday. These positions offer interesting work in a pleasant environment with good opportunities for career advancement. Re-location expenses will be paid where appropriate.

Find out more - contact Knight on 01-491 4706 quoting Ref YY405.

ICL COBOL Programmer (Money Brokers)

City

Our client is a major International Money Brokers based in the City. Their computer centre currently houses an ICL 2904, ME29 and an ICL System 25 is now being installed to be used as a development machine. Plans are underway to increase their hardware by the end of 1984.

The COBOL Programmer will be engaged in the development of Financial Broking systems based on the ICL System 25. This will involve working as a member of a new team.

Candidates should have upwards of eighteen months ICL COBOL programming experience gained in a commercial or financial environment, preferably on ICL System 25.

to £10,000

The company will present the opportunity for the Programmer to progress into an analysis role.

The successful candidate will be rewarded with a benefits package which will include a non-contributory pension scheme, season ticket loan and medical health insurance.

Computer Systems Manager

£16,000 plus Car plus Major Benefits

We are a major UK Manufacturing Distribution Company, with several Brand Leaders, and a substantial growing Export Business.

From our modern UK headquarters, based in the N. Home Counties, we provide a central computer co-ordination facility controlling centres throughout the British Isles.

Our dynamic expansion record and ambitious '84 Corporate plans have created an urgent need to expand the current scope of our computer usage dramatically.

To address this requirement we wish to appoint an experienced Computer Systems professional to head-up the next critical phase of our Development.

Our profile calls for an experienced Systems Manager, with a high degree of Technical competence and management skills. Demonstrable ability to understand the 'business needs' (manufacturing and distribution problems in particular) together with highly developed User-liaison skills are essential, since the provision of a first-class service to the users is the priority.

A strong association with IBM System 34 and/or System 38, and working familiarity with RPG will be highly advantageous.

In order to secure the highest calibre individual available, an extremely attractive package is offered, including a high base salary, annual bonus, Company car (plus petrol allowance), pension, life assurance, B.U.P.A., four weeks holiday and relocation package if appropriate.

For a private and confidential discussion on this opportunity contact **Nick Reid** on 01-835 0671 during office hours or 01-844 1973 evenings or weekends.

Alternatively send your C.V. immediately to him at the London office.

Project Managers

New Appointments

SOUTH EAST
NORTH OF ENGLAND

to c.£22,000+car

dependent upon experience in
Merchandising, Retailing, and Point of Sale Systems

for a major fast moving consumer goods group with a commitment to develop and implement a whole range of new systems to meet burgeoning business information needs.

Reporting to the Systems Development Manager the appointees will be responsible for confirming, developing and implementing retailing, merchandising and point of sale systems, as relevant to experience and preference, utilising new and advanced hardware and software technology.

You are a senior systems analyst or project leader experienced in POS, merchandising, or retailing systems development from feasibility to in-store installation in a large scale high technology environment. The systems you will develop and implement will form the basis for further significant developments towards the fullest possible computerisation of the retail business management and decision processes.

A major capital investment programme in high technology is underway, and these appointments offer green field opportunities to move into managing front edge business systems automation.

Dependent upon the appointees location preferences, the appointments will be situated either in the South East or the North of England.

Excellent starting salaries will be offered at all levels dependent upon experience, and persons with the required breadth of experience and potential can look to commencing around £22,000 plus a company car.

There are also a number of positions at PROJECT LEADER level available which could be of interest to Systems Analysts with relevant retail systems experience seeking their first significant move into project management, sooner than later.

Please send a ONE PAGE career history list, or a CV, or write or telephone for a Personal and Professional History Form, to SARAH KENNEDY, Executive Selection Division, quoting reference number GW1180, at the address below. Applications are invited from either sex.

SENIOR APPOINTMENTS - £14K +

TECHNICAL SUPPORT CONSULTANTS

London Base £14,000 + Car + Bonus Scheme

Our Client is a World leader in systems software who have developed a unique and comprehensive range of IBM Systems Software products, acclaimed as being the most advanced in today's market, with a well earned reputation for excellence. Undoubtedly, part of their success is owed to this market edge, though clearly in evidence is a well trained and highly motivated team of product specialists and sales executives who have the support of skilled technicians.

Due to the recognition of their products, their expansion plans for 1984 are extremely exciting. They, therefore, require a number of skilled technical support consultants to be based from their head office in London.

There are two main areas where opportunities exist: Firstly, within the section that supports existing clients, there is a need for a specialist who enjoys the 'hot-line' environment. This is an in-house position requiring a person with IBM large systems and low level ASSEMBLER experience who can read dumps, assess a problem analytically and provide a solution to clients' problems over the telephone.

Secondly, support is required within the 'new client services' area: Here the person would work in the field providing an interface to sales and, as well as being technically sound, should have the ability to give presentations, build up good client relationships, giving support on the products through to implementation.

Here are opportunities second to none for skilled, ambitious professionals.

In the first instance contact our advising consultant Pam Hale on 021 236 1999 (24 hour answering service) or 0908 606831 (evenings and weekends). Alternatively submit a curriculum vitae to the Birmingham office.

Systems Manager

M Maidenhead to £16,000 + Car

Leasco Software Limited is undoubtedly one of the UK's leading Computer Systems Companies and has an enviable record of growth and success. Because of further growth our Commercial Systems Division Production Group needs to recruit a third Systems Manager.

Reporting to the Group Manager you must be capable of running several project teams and directly supervising Project Managers. Initially the post will involve controlling a variety of Leasco managed activities for a single major client, including Leasco's own software development, support and consultancy, as well as the activities of hardware and software sub-contractors. In the longer term involvement with more than one client can be expected.

Proven skills in planning, team building, staff motivation and effective client liaison will be required. Experience in business applications is vital, and experience of MIS Systems Implementation (especially in Central Government) will be an asset.

In addition to the salary and car you will enjoy a first class range of benefits including profit sharing, free lunches and a subsidised pension and permanent health scheme.

Please telephone or send your c.v. to: Patricia Mole, Personnel Officer, Leasco Software Limited, 150-152 Bath Road, Maidenhead, Berkshire SL6 4LD. Tel: (0628) 23394.

SAINSBURY'S

(7301)

ADVANCED INFORMATION TECHNOLOGY AND KNOWLEDGE ENGINEERING OPPORTUNITIES TO JOIN ONE OF THE UK'S LEADING GROUPS. SALARIES TO £18K.

SPL International's Research Centre is the Company's corporate focus for advanced information technology. The Centre's work involves the design, development and marketing of software tools and technology for use within the Company and for its clients in the UK, Europe and the rest of the world. During 1984 the Centre will be making investments in new Knowledge Engineering tools and advanced knowledge-based application.

In support of this programme applications are sought from individuals who have experience of and can demonstrate achievement in one or more of:

KNOWLEDGE ENGINEERING
Consultancy, design or implementation skills in K.E. including the development of at least one significant application preferably in sensor data processing or with a large MMI component. For senior positions a broad group of KBS techniques is essential.

SOFTWARE TECHNOLOGY
Design and implementation of advanced interactive software environments including object oriented, applicative, list processing and logic programming languages, relational database and expert system shells.

EMBEDDED SYSTEMS
Consultancy or project management skills in embedded applications including plant monitoring and control, EM and acoustic sensor data processing, tactical simulation and military or related command and control systems.

The Research Centre is located in an attractive part of the UK at Abingdon, near Oxford. It maintains strong links with other SPL Divisions, both in the UK and continental Europe. Extensive computing facilities are installed including a powerful VAX configuration, PDP service machines and a wide variety of micros. Software environments include POPLOG, PROLOG, LISP, ADA, SAGE, ALGOL68, PASCAL and RTL/2.

To applicants with the right experience, motivation and innovative skills these opportunities offer:

- ★ Competitive salary with relocation as appropriate
- ★ Excellent career prospects in a growing organisation
- ★ Scope for innovation at the front of current thinking
- ★ Visibility and recognition of individual effort in small teams.

Write with c.v. or call: Cheryl Carter, SPL International Research Centre, The Charter, Abingdon, Oxon. (Tel: 0235 24112).

(7282)

GENERAL SALES MANAGER

superb opportunity for young professional

£16,000-£18,000 base £35,000 total 2-3L car

Our client, a division of one of the world's most prestigious companies, is a leading vendor of switching products. With an excellent product range and high quality reputation, they now seek a young Sales Manager of the highest calibre to sharpen their sales and marketing profile.

Reporting to the Executive Vice-President and controlling four sales groups, you will be responsible for vigorously directing all sales efforts. With new products to be launched in the spring, you will be expected to fully exploit the market potential within new and existing business sectors.

Essentially, therefore, you will be an aggressive and tenacious sales professional, aged between 28-35, and with a proven success record. You will be a galvanising leader, able to hold your own in a variety of sales and management situations. Previous experience in communications or management is not essential provided you can demonstrate the above qualities.

This position surely represents an outstanding career opportunity for the ambitious young sales professional.

For further information, contact Paul Child on (07535) 56155 or write to:
Kramer Westfield Associates Ltd., 23 Victoria Street, Windsor, Berks. SL4 1HE.

Project Management

A sound knowledge and user-experience of PMI systems - typically INTERNET, ATS, ARTEMIS or ICL PERT, could qualify you for this exciting assignment.

Our client is a world leader in the design and development of capital electronic systems and is now introducing new management information systems as part of a commitment to pursuing advanced project management techniques.

If you are fully conversant with the concepts underlying the design criteria of large scale systems and with interfacing a PMIS with a company data base, you could lead, or assist in, the implementation of such a system. Having achieved this, you would either be assigned to a specific major project, or to the further development of the system, towards the automated production of management information, in a multi-project environment,

covering the complete spectrum of activity.

The rewards include a competitive salary and an attractive range of big-company benefits. Career opportunities within this progressive organisation are excellent. Relocation assistance will be considered where appropriate to an attractive part of S.E. England.

Applicants should write with full personal and career details to Confidential Reply Service, Ref ACP 8914, Austin Knight Advertising UK Limited, London, W1A 1DS.

Applications are forwarded to the client concerned, therefore companies in which you are not interested should be listed in a covering letter to the Confidential Reply Supervisor.

Just the brew for your DP Career

A new £multi-million Data Centre in Reading; a sophisticated SNA driven environment; distributive IBM 3083 and 4341 mainframes; and advanced development projects including distribution, sales and marketing, manpower and financial systems.

That's just part of Whitbread's new programming brew which is guaranteed to give your career a boost.

Other ingredients include an exciting career environment which is expanding fast, often leading to rapid promotion, hence our current vacancies; highly competitive salaries, and all the other benefits to be expected from one of the world's top brewing/catering companies.

**Programming Team Leaders
Technical Support Programmers
Programmers
Senior Analysts/Analysts
Senior Quality Assurance Analyst**

The most important requirement for programmers is a good knowledge of COBOL gained in an IBM background. Experience with CICS and DL1 would be useful, although training is available where necessary in the use of on-line and database techniques.

For the analysts positions we are looking for at least two years' sound systems experience ideally in a CICS/DL1/MVS environment.

For the quality assurance analyst position we are looking for broad experience of systems development together with soundly based judgement and opinions concerning all aspects of quality.

But professional skills are not all we're looking for. Enthusiasm, commitment and the ability to work within a demanding but stimulating dp environment, are particularly important.

Salaries will be in the range of £8,000-£14,000 per annum according to level of appointment and experience, and with the more senior positions a company car is provided. There are also attractive benefits including BUPA membership and generous assistance with relocation to this very pleasant part of the country.

For an informal chat ring Mike Sparkes on Reading (0734) 581166 or send your cv. to Mr. P. G. Kerry, Personnel and Administration Company plc, Whitbread Court, Letcombe Street, Reading, Berks RG1 2HW.

COMPUTER OPERATORS

c. £8,400

Bankers' Automated Clearing Services provides an Electronic Funds Transfer (EFT) Service to the Banking Industry. Based at Edgware, North London, our Computer Centre currently consists of three ICL 2980's, two ICL 2986's and Telecommunications Equipment.

Experienced Operators are required at this Centre. Candidates should be aged over 21 years with a minimum of 2 years experience on ICL 2900 Systems. Preference will be given to those who have VME/IDMS knowledge, and candidates should be prepared to work a 3 shift system.

As an Operator you can expect a starting salary of up to £8,400 including Shift Allowance and a generous package of benefits which includes:-

Four Weeks Annual Holiday, Non-Contributory Pension Scheme, Luncheon Vouchers, Profit Sharing and Christmas Bonus.

For further details and an application form telephone Mrs. Rita Sidders on 01-952 2333, or write to her at:-

Bankers' Automated Clearing Services Limited, De Havilland Road, Edgware, Middlesex HA8 5QA.

BACS

INSTRUCTORS -OFFICE SYSTEMS

London
Attractive salary + car

Wang's outstanding success as a computer company is based on a unique office automation product strategy utilising six key technologies: text, data, voice and image processing, networking and human factors. It is in the last, but not least, of these areas that our education function has a major part to play, by ensuring that customers achieve an optimum interface between their Wang equipment and the users who operate it.

This post will cover all Wang's Office Automation Systems, both WP and DP. As well as conducting customer courses, you will be involved in briefing and updating our own sales and support staff, and in

developing course content. The post will be based in the West End, although occasional travel will be necessary. A thorough knowledge of OA systems and previous teaching/training experience is required: this may have been in a technical support role rather than as an instructor.

In addition to a very competitive salary, benefits include a car (travel to customers premises is involved), BUPA, pension, life assurance and stock purchase schemes. Please send full CV to Christine Townsend, Wang (UK) Ltd., Wang House, 661 London Road, Isleworth, Middlesex TW7 4EH or tel. 01-847 1954 for an application form (24-hour service).

WANG

The Office Automation

N.C.R. EXPERTISE

Birmingham and Bridgwater is a major building society with assets approaching £450 million and over 70 branches serving the Midlands and South West of England.

We have recently upgraded our mainframe to an NCR V8675/II running under VRX, and are about to embark upon an extensive development programme to introduce counter terminals into all our branches. This has created the following attractive career opportunities.

PROGRAMMER/ANALYST £8,300-£9,590 p.a.
(Review pending)

The successful applicant will play a major role in the investigation, design and implementation of new systems and must possess the ability to communicate effectively with all levels of user. A knowledge of on-line techniques and/or database principles would be an advantage.

PROGRAMMERS £7,000-£8,050 p.a. (Review pending)

Candidates should have at least twelve months' in-depth experience of either NEAT/3 or COBOL.

An exciting career is offered to DP professionals who are prepared to work on their own initiative and accept the responsibilities these positions demand. In addition to a competitive salary structure, these positions also offer the following benefits:

- ★ Concessionary mortgage facilities
- ★ Free membership of BUPA (including spouse and children)
- ★ Low-cost contributory pension scheme with life assurance
- ★ Permanent health insurance
- ★ 22 days' annual leave (increasing with service) plus 8½ days Bank Holidays
- ★ Subsidised staff restaurant
- ★ Free, easy car parking
- ★ Relocation package were appropriate

In the first instance applicants should write, giving full personal and career details, including current salary, to:

Ray Jones, Computer Manager

BIRMINGHAM BRIDGWATER
BUILDING SOCIETY

MIS Manager

Surrey c£14,000 + Car

Our client has an enviable reputation at the forefront of the reprographic industry. This wholly owned UK subsidiary of a worldwide office equipment organisation is one of the leading manufacturers of specialised paper and Computer Aided Design equipment.

They currently require a Management Information Service Manager to head up the Data Processing Department and be responsible for the introduction, development and implementation of manufacturing and financial computer systems.

Candidates will have considerable Project Management experience and must possess a sound Data Processing background including knowledge of telecommunications. Equally important is a strong personality with the necessary drive and initiative to provide decisive management and the ability to communicate effectively at all levels.

If you wish to further your career potential and take advantage of this exciting opportunity which includes all the benefits of a major company, please telephone or write in the strictest confidence quoting ref DF7450.

Lloyd Chapman Associates
123 New Bond Street, London W1Y 0HR 01-493 7761

Software Engineers Who've fallen on hard times...

We don't mean those with holes in their clothes, hunger pangs and bare feet - if they exist that is. No, the people we want to talk to are the ones who have been suffering from lack of scope, poor facilities and project boredom. You're ambitious Software Engineers, and we have your greatest incentive.

As a major international systems consultancy, Cord can offer you everything that reflects professional excellence. Our specialisation in the high technology areas of computing means that our expertise is in demand for short term consultancy up to million pound projects. We are dynamic, profitable and developing fast. What's more, we understand exactly what makes someone like you tick.

Consider a diverse range of applications embracing communications, real time, and defence, each of which will fully stretch your capabilities. You'll work at the forefront of technical software design, using the finest available facilities and making a tangible contribution at every stage from concept through to completion. What's more, you'll be working towards implementation every time.

No one could extend your experience so quickly, and nowhere will you find better prospects. You'll be continually challenged by our flexibility, working both inhouse and at client locations, with well defined responsibilities.

Matching our pace means being bright, presentable and outgoing. Aged 25-35 you're probably a graduate, although our emphasis is primarily on experience, which must have been gained over at least 3 years in a relevant scientific or technical background, where you will have become familiar with technical and real time languages such as Assembler, Coral or Pascal. All this will bring you career development fast, with early management responsibility.

Salary wise, we're talking up to c£15,000 depending on your ability. And there are many other benefits such as first class training, free personal PPF insurance, a pension scheme, expenses and relocation assistance if necessary.

So phone Derek Pearson on Staines (0784) 63911 during business hours or on Bromley (0889) 50709 evenings and weekends. Alternatively, if you prefer, write to him at Cord Designs Limited, Cord House, The Causeway, Staines, Middlesex TW18 3AX.

Cord Designs Limited

ZEUS HERMES DIVISION

SYSTEMS SUPPORT

Bristol Office
Pre and post sales
£9,000 - £14,000 + car

Can you support a sales success story like ours in Bristol?

We are being particularly successful with the sales of our wide range of products to the end user market, notably in CAE, office automation and networking systems.

This success demands a major increase in our systems engineering support. This is where you come in.

If you are aged 25+, have at least 2 years' systems software support experience, either with a user or a computer systems manufacturer, thrive in a competitive market environment; yet find that your present company lacks a certain cutting edge, then we need you now, particularly if you have specialist experience in:

- * Integrated Office Systems
- * Computer Aided Engineering
- * Networking
- * Data Bases

The new MV/10,000 is the most powerful computer in Data General's Eclipse family. It is the fastest and best price/performance virtual memory 32-bit computer on the market.

We want people to match our product growth and market penetration in these areas.

Initial training includes product familiarisation in the United States.

Besides an initial salary which is negotiable £9,000-£14,000 + car, there is a bonus scheme.

As we said, Data General in Bristol is puzzling. Join our hive of activity and redefine your career with the company that delivers tomorrow's technology.

Send your c.v. or write or telephone for an application form to: Gina Richards, Personnel Officer, Data General Limited, Hounslow House, 724-734 London Road, Hounslow, Middlesex TW13 1PD. Tel: 01-572 7455.

RANK XEROX

Bushey, Hertfordshire

IBM 4331 OS/VS1 CICS COBOL

Systems Programmer to £14,500

The above machine will shortly be installed at Rank Xerox, Bushey. It will be used for the development and support of systems for use in Rank Xerox Operating Companies in several countries.

An experienced person, ideally with OS/VS1/CICS and a good working knowledge of IBM telecommunication protocols, is required as the sole systems programmer for this machine.

He or she will have additional responsibilities, such as support to application development groups and the use of microcomputers linked to mainframes. Infrequent overseas travel may be required.

Analyst/Programmers £11 - 13,000

Several major systems are being developed and supported by expanding project groups at Rank Xerox, Bushey.

These systems, embracing service, administration, financial and marketing applications are in use in several Rank Xerox Operating Companies around the world.

We are looking for people who have 3 years solid COBOL and who are seeking an opportunity to develop their knowledge of CICS on-line processing techniques. These positions will suit mature and ambitious individuals who will enjoy variety and challenge with occasional overseas travel.

The work environment is extremely modern and comfortable, and the above positions carry excellent fringe benefits including BUPA. Generous relocation assistance to this pleasant location in the green-belt of Hertfordshire will be provided where appropriate.

For full information and an interview, telephone Digby Dyke: 0905 611512 office hours, or 06845 2210 evenings and weekends or write to him with details of your career to the address below.

Computer Personnel & Executive Development Associates Limited
11 Gillingham Street, London, SW1V 1HN.

If Leonardo da Vinci had shown his ideas to CASE...

Leonardo kept his drawings of flying machines secret, knowing they wouldn't be understood. If he had been able to show them to CASE, we wouldn't have had to wait until 1939 for the first successful helicopter flight.

Our technological understanding and commitment to an adventurous programme of Data Communications research and development, has already meant that we're producing ideas ahead of our time. More daring than most companies, we allocate large capital budgets to new development projects and, we provide our Development Staff with all the resources they need to develop original, inventive, even revolutionary ideas.

Our less formal, less hierarchical company structure means we avoid unnecessary bureaucracy. Our working environment encourages creativity and our R & D Managers are approachable and open to new ideas. The outstanding success of our products and the career progress achieved by our Development Staff, proves that we've created an atmosphere in which everyone works at their best.

Is this the sort of environment you've been looking for?

We're now seeking Systems Designers, Systems Engineers and Programmers, Real Time Programmers, Signal Processing Engineers, PCB Designers and Mechanical Designers, to join our Communications Product Development teams at various levels in the following specialisations:

- Mainframe Protocols
- Statistical Multiplexing
- Networks, Wide and Local
- Communications Processors
- Network Management Systems
- Real Time, Multi-Tasking Software
- Message Switching / Mail Systems
- Digital Signal Processing - Modems
- Communications Protocols X25, PAD, X121

The starting salaries offered will be up to £18,000 p.a. depending on the extent and relevance of your experience and qualifications, plus relocation assistance where appropriate.

Call Chris Burns on Watford (0923) 33500 or write, with full details, to him at: Computer and Systems Engineering PLC, Caxton Way, Watford Business Park, Watford, Herts. WD1 8XH.

Sales Executive

IBM Application Software

'Real achievement has always depended on one thing - the successful management of human resources'

Our Client, a major UK and International Software Company, has recognised this since the early 60's and embarked upon a deliberate policy of developing computer based management tools to meet essential requirements of organisations dealing with human resources. Their specialised software products are unequalled in their performance and ability to meet each customer's precise requirements, and have been designed to provide a complete human resources management package.

As a result of their continued success and planned growth, we have been retained to recruit a Sales Executive to be based in the Midlands, to become part of our Client's positively directed and well supported sales team. The geographic area to be covered is the Midlands and Scotland, where your brief will be to sell extensions to their large installed client base and prospect for new business.

Candidates to be considered for this exceptional position must have a proven sales track record to date, be capable of negotiating at Senior Management level, combined with a background in Systems or Programming preferably gained in an IBM environment. Our Client's policy of internal promotion, creates many career opportunities, both in the UK and Overseas.

computer recruitment limited 15 Red Lion Square London WC1R 4QH. Telephone: 01-242 9796

Join this ambitious comms project in Manhattan, and gain-

- State-of-art techniques
- Top-scale salaries
- Long-term career potential
- Exclusively development work
- American life-style
- Superb family relocation scheme

- Analyst Programmers
- Network Consultants
- Systems Architects
- \$30,000 to \$65,000 (see scales below)
- equates to £21,000 to £46,500 p.a.

Analyst Programmers

- Mandatory skills:
- 3-5 years experience
- OS/MVS
- On-line systems
- Assembler

\$35,750 to \$41,500 p.a.

Also, for some positions, one or more of:
CICS, TCAM, SDLC, BISYNC, ACF/NCP, 3705.

Ideal applicants will have experience of a large installation, strongly developed analytical skills, and good powers of communication. Experience of a disciplined approach to standards and project planning is important - our Client uses 'Project Life Cycle' methodology. The work comprises the development of a new communications system using state-of-the-art technology.

Communications Analysts & Consultants

- Mandatory skills:
- Voice and/or data networking
- Optimiser techniques
- Analysis skills
- Good communicator

\$39,000 to \$47,500 p.a.

Also, for some positions, one or more of:
Network design, network project co-ordination, analysis and design of comms systems.

Systems Architects

- Mandatory skills:
- 8+ years experience
- Voice and data network technology
- Multiple project scheduling & control
- Independent research experience
- Good analytical skills

\$52,000 to \$65,000 p.a.

For most senior positions:
12+ years experience
Appreciation of state-of-the-art voice & data hardware & software
Technical management experience

Systems Architects and Communications Analysts and Consultants are required to work on the project in our Client's large network engineering division - a dynamic, high-technology environment. All applicants must be able to demonstrate a strong networking background to qualify for these medium - to senior-level positions.

The Project

Our Client is the world's largest brokerage company, based in the financial quarter of Manhattan. They are developing an ambitious, advanced networked communications system for their worldwide operations, capitalising on the latest developments in technology, including satellites, fibre-optics and voice and data transmission.

With an initial assignment period of 12 months, all these positions carry the potential for promotion and for long-term career development within our Client's organisation.

Our Package

Our New York office is located very close to our Client's site, providing on-the-spot support and assistance to all personnel assigned to the project. We have over six years' experience of resourcing projects in New York, and understand how to help new arrivals settle in with minimum disruption. Our relocation package provides full family affairs, relocation allowance, medical insurance, sick pay; it also arranges accommodation, banking facilities car transport (if appropriate) and practical assistance in settling in.

Action

These are superb opportunities for suitably qualified people to work on the latest telecommunications systems and to enjoy the experience of the American way of life. Screening interviews are currently being scheduled in London, Birmingham and Manchester, and our Client will conduct selection interviews in London from 11th February, 1984. Please Mary Coleman today on 01-836 8411, or send your C.V. to her at Computer People International, VLI House, 68-69 St Martin's Lane, London WC2N 4JS. Alternatively, mail the coupon.

SALES & SUPPORT SPECIALISTS

Is your career as advanced as our Data Communications Products?

Many organisations claim to be at the forefront of modern technology, but few can match the advanced range of sophisticated communications products marketed by our client. As a young, but already well established and respected company, with a product range including modems, personal computers, worddata software packages and communications networks, they are poised to make further inroads into the marketplace. Additional sales and support specialists are now needed to maintain the already considerable momentum.

Hardware Support Specialists (2)

Software Support Specialists (2)

London based £10,000

Essentially office based, you'll have the technical knowledge sufficient to answer queries from both Dealers and End Users in one of four areas: CPM based micro hardware or CPM micro software at a small business systems level; data communications software. Additionally, you would be expected to help provide a technical training to Dealers and their sales staff.

For further details and early interview call Noel Price on 01-278 6126, or 01-286 9117 (7pm-11pm) or write to him with full CV to: ACSIS Inc., 37-39 Bowling Green Lane, London, EC1R 0BJ.

MVS SPECIALISTS for

SYSTEMS SOFTWARE DEVELOPMENT & SUPPORT

Surrey to £20K + car

MACRO 4 has been originating and marketing systems software to DOS/VS users with great success since 1968. We have our own 4341 dedicated to development and support of our products, which are marketed worldwide.

We are now entering the MVS market and require several experienced MVS Software Specialists to work initially on conversion and/or support of existing products, and subsequently on new products.

Prerequisites are a thorough knowledge of MVS structure (internal knowledge would be an advantage), ability to write Assembler and a high level of self motivation.

In return we offer an excellent salary, non-contributory pension scheme, free BUPA membership plus the normal range of benefits associated with a successful company.

GET THE KEY TO YOUR FUTURE AND OPEN UP A WHOLE NEW LIFESTYLE.

The Yorkshire Building Society is one of the UK's largest and most progressive Building Societies with over £1 Billion of assets.

From this secure and well established base the society is now completing its plans for the introduction of totally new hardware and application systems designed to meet its computing needs into the 1990's.

Dual Honeywell DPS7 mainframes will be installed to support a growing demand for on-line and real-time systems.

A number of new positions have been generated which offer excellent conditions, progression and technical content.

The following key personnel are now required to ensure the success of this new venture.

SENIOR ANALYST/ PROGRAMMER c£11,000

The ideal candidate will have at least 4-5 years experience in DP with some previous supervisory experience and an in-depth knowledge of COBOL, DPS7 or LEVEL 64 with TDS.

Contact STEVE SYKES or JOHN MASON on Leeds (0532) 455911 during office hours or STEVE SYKES via Appleton Roebuck (090484) 350 evenings and weekends, or write to the address below with brief career details.

ANALYST/PROGRAMMER c£8,500

We are seeking 2 bright Analyst/Programmers with a minimum of 2-3 years experience in DP, and in-depth knowledge of COBOL, preferably on DPS7 or LEVEL 64 with TDS. Candidates with experience in a similar environment will also be considered for these posts.

This is a rare opportunity for top calibre people to join a large, successful and expanding organisation at the outset of this major development. The jobs are stimulating and challenging as you will be working with "State of the Art" hardware and software and there are ample opportunities for progression as the department grows.

Head Office is located in the centre of Bradford, within easy reach of the Yorkshire Dales and attractive and reasonably priced housing areas.

This progressive financial institution offers very attractive salaries plus concessionary mortgages, the usual large company benefits and excellent working conditions. Relocation costs will be paid where appropriate.

Senior Consultant

PETER HENRICK
Consultant

Welcome to 1984 with Dalroth entering its fourth year; not that we are really that young because Dalroth is the result of merging OCC Contracts and William Key & Partners, two well-respected and long-established computer recruitment specialists.

During 1983 we expanded not only in the U.K. but in the U.S.A. and the Middle East and offer a professional and personnel recruitment consultancy service based on years of experience in the industry we have grown up with.

History has proved that "today's applicants are tomorrow's clients".

The brief details, on the centre fold, of jobs available in the U.K., Europe, U.S.A. and the Middle East indicate the breadth and scope of our activities. They represent only a selected extract from our current requirements file.

Should you wish to be considered for any of these or similar positions, or be interested in making a general enquiry please make use of the freepost application form provided on the back, or telephone any of us for further information.

Alternatively if you are a client please do not hesitate to contact any one of us to discuss your requirements.

The Market Leaders

A CHALLENGE FOR THE FUTURE

Analyst/ Programmer

The new Fife Ethylene Plant in Fife, Scotland, is scheduled for start up in 1985. The Plant is in an attractive location within easy reach of Edinburgh. Designed to convert North Sea Gas to ethylene efficiently, this plant represents an investment of over £400 million and it will rely heavily on up to date computer systems. As part of the planned build up of staff we are seeking a graduate with up to 3 years computing experience to join our Information Systems Department. This is responsible for establishing a complete range of computing facilities to the plant from manufacturing information through plant maintenance to financial and electronic office systems. Initial role will be in the manufacturing information area with later opportunities to move to other parts of the company as the career progresses. Early responsibility will be given to work closely with users to meet their computing requirements. The department uses primarily an IBM 4341 and a Data General MV8000 computer. The IBM system is based on a powerful relational data base management language. Other systems are available through the company network. Candidates should be in their mid twenties. Training relative to previous experience will be provided. It would be an advantage for candidates to have a chemical engineering or computing science background, but opportunities are by no means restricted to individuals with this experience.

Systems Programmer

We are also seeking a systems programmer to take responsibility for the operating system on the IBM 4341 and its relational data base management system. Primary responsibilities will include the start up of this system and the provision of consultancy services to the company's plant at Fawley, Southampton, and two other sites in Europe. In addition the successful applicant will take some responsibilities for the Data General System and for commissioning and maintaining interfaces in a multi vendor environment. Candidates should be in their mid twenties, ideally graduates with experience in a systems programmer role of IBM's VM operating system in a database applications environment. However, consideration will be given to those candidates who have experience working with other operating systems.

Candidates can expect a competitive salary and benefits package which includes a relocation allowance where applicable.

Interested parties, male or female, should telephone 0592 262228 or write for an application form and job description to:

P W Allnutt
Recruitment Co-ordinator
Esso Chemical Ltd
Carlyle House, Carlyle Road, Kirkcaldy, Fife

Operators/ Senior Operators

Bournemouth
£6,500 - £9,000 Plus Benefits

Remuneration inclusive of Shift Allowance
Benefits include relocation package and mortgage subsidy (where applicable), non-contributory pension, free life assurance, subsidised restaurant, sports and social club and staff discount shop.

Requirements

Abbey Life has vacancies for Operators and Senior Operators with a minimum of 1 years experience of MVS/JES2 (VS1 would be considered). Knowledge of JCL and utilities would be an advantage but not essential. 5 'O' levels (including English and Maths) are also required. The Company operates a 5 day, three shift system, currently under MVS/SP on twin IBM 3083 CPUs with ACF/VTAM, CICS/VS and ROSCOE.

Please write or telephone for an application form to:

Val Hastrop or Alison Davies,
S. & D.P. Technical Recruitment,
Abbey Life Assurance Company Ltd.,
80 Holdenhurst Road,
Bournemouth BH8 8AL.
Tel: (0202) 292373 ext. 4444.

SMR**Sales & Marketing Recruiters Ltd**

Leaders in High Technology Recruitment

**SALES EXECUTIVES
or
SALES MANAGERS
ALMOST TOO GOOD TO BE TRUE?**

That's what these 2 job opportunities appear to be at first sight! After all, how often is it that you come across the chance to join an undisputed leader in its chosen area of computing, with a totally original marketing concept and a completely unique product, yet a company that has been enjoying continuing success for the past 10 years?

This is a company where the salesman is king. Indeed, all the company directors have distinguished records of success in territory sales. Mind you, you have to be good! No matter how accomplished you are you will have to learn some new selling techniques and conceptions, which will necessitate extensive and continual training.

Summing up the total attractions of these jobs is difficult, other than to say the company offers a fruitful environment for excellent people to fully exploit their potential and truly enjoy their work. Here are a few more considerations:

- * Only one salesman has left this company in the last 10 years.
- * There is constant exposure to the highest level of management in British industry.
- * Every transaction is different.
- * Their salesmen are involved in more deals in a month than a minimal frame salesman normally handles in a year.
- * There is perpetual involvement in the most exciting aspect of selling.
- * This product area automatically increases personal market value and business management skills.
- * The company is dedicated to individual freedom of expression, flexibility of operation and excellence of performance.

The jobs are located in

LONDON & NORTHERN ENGLAND

and will be best suited to those sales people who feel comfortable handling sales transactions of around £½ million; successful negotiators with a truly competitive nature and real flair for creative thinking. It will be a particularly attractive opportunity for those in sales management who would prefer to be doing deals instead of 'prattling around' with staff!

Expected earnings, other than sickness insurance and health assurance, include profit-sharing and a high basic salary, with a total remuneration of

OVER £30,000 + GRANADA GHIA (or equivalent)

Please contact Alasdair Scott (London), or Roger Dodd (Lichfield), quoting reference WSA/123.

LONDON & SOUTH29 Oxford Street,

SALES TRAINING, MARKET RESEARCH, RECRUITMENT

We rank among the leading producers and wholesalers of fashionable sportswear in both Europe and the U.S.A.

We are looking for a top IBM S/38 programmer/analyst. Knowledge of RPG III and a complete understanding of the data-base concept are essential.

We use the IBM/38 Model 7-4MB, currently with 45 terminals. In addition we are working towards for decentralized order processing with micro-computers.

You may also have to work in the 7 European countries, where we support our sister concerns and in Hong-kong and San Francisco with whom we also communicate with help of a Series/1.

With us you have the advantages of a permanent job and also a demanding job in varied and complex areas.

If you want to work in a very friendly atmosphere and think that you are the right person for this job, please get in touch with our Mr. Virk.

Esprit, Helsestraße 42-46, D-4030 Ratingen 1-Tiefenbroich, Tel. 0212/49 2127.

ESPRIT**We need
five easy
Sales Executives
for Scotland, North West
Midlands and South
East England**

We're not paying it's an easy job, but selling Video.com products is different. You'll have an undoubted range of business solutions with more to offer than the competition. The successful applicants will have experience in large system sales to government, nationalised industries or large commercial accounts.

You will be totally responsible for sales and marketing development in your areas. You may be given National Accounts, but should have an appetite for competitive sales.

We'll pay your worth, provide a company car and offer you the sort of fringe benefits you'll expect from an international company.

We're Videocom

In the ten years since we started, we've made a name for ourselves around the world by designing and manufacturing a unique range of terminal systems and micro computers.

We're British, we're successful, we're over 100 strong and growing fast.

If you think you're right for us, ring for an application form or send your CV to Sylvia Quedley.

VIDEOM

Videocom Limited,
Newtown Estate, Henley-on-Thames, Oxon RG9 1HG

**DATA COMMUNICATIONS
TECHNICIAN****SALARY TO £9,000 P.A.**

LSI Logic, a leader in the field of custom designed integrated circuits, requires an experienced Data Communications Technician to support its new European facility based in Bracknell town centre.

The successful candidate must have two-three years' experience of Data Communications and demonstrate a basic knowledge of:

- Digital and analog network operations
- Circuit installation
- Modern and circuit configurations routines
- ASCII - EBCDIC protocols
- Data communications test equipment
- SNV/SOLC architectures
- Trouble-shooting procedures

Primary responsibilities consist of working the Regional Communications Manager with maintenance and installation of local and international networks.

We offer a competitive salary and an outstanding benefits package. Some travel may be required. Career prospects are excellent.

For consideration of this position please send a full c.v. to:
Communications Manager
LSI LOGIC LIMITED
Grenville Place, The Ring
Bracknell, Berks. RG12 1BP

**UNIX & "C"
PERSONNEL****Age: Open £7,500-£12,000**

Due to a major Unix development, opportunities exist in a fast-moving and high-powered BANKING environment for experienced "C" Programmers at various levels. Prospects are excellent but full commitment is required.

Graduates with "C" experience will be considered. Preferential mortgage possible.

**BUSINESS BUILDER
NEW BUSINESS VENTURE FOR
REMPLOY LIMITED**

We are looking for a Manager to set up and run a new unit providing essential services to business micro-computer users.

The initial task will be to build a team of up to 10 people, probably at the Leatherhead Remploy factory with the intention of expanding the operation to other strategically located sites.

The job includes recruitment, training and motivating disabled staff and establishing standards, job costing and accounting routines. Selling of the service will, initially, be carried out by the existing Remploy staff.

Some knowledge of CP/M, MS/DOS and communications between micros is desirable.

Starting salary around £12,000. Usual large Company benefits.

Please write, with comprehensive C.V. to:
Brian E. Burt & Associates
2 Waterloo Place, Richmond-upon-Thames
Surrey TW9 1EB

Remploy

Access Data Communications Ltd was founded in 1978. In the subsequent five very successful years they have established themselves as a leading distributor of systems and peripherals. Growth at the rate of 35% per annum has enabled them to expand their offerings to the market to now include: Wang, Apricot, Future, Qume, Brother, Facit, Newbury Data and Epson, products and technology.

Company and product expansion has been achieved by the simple philosophy of understanding market needs and by servicing those needs with the right products at the right price.

**Sales
Executives
London/Home Counties/North West
to £23K package**

Building for the future has begun with the establishment of a new sophisticated showroom facility at Uxbridge. However, success is built around people and it is salespeople with the energy to impact heavily on the market place who are the key to further development. The right individuals will of course have a proven sales record although not necessarily in the Computer Industry, but it is only those individuals who think conceptually, laterally and who aggressively need success that will create a better and brighter future for both the company and themselves.

Access Data Communications Ltd offers a successful range of products, a unique salary structure that truly rewards success and real career opportunities. In short, A World of Difference.

For an informal discussion ring Mike Reynolds or Kathy Sinclair now on 01-637 9611.

SENIOR COMPUTER SPECIALISTS

Oil Industry Tax-Protected Salaries Libya

Our client is Arabian Gulf Oil Company operating in the Socialist People's Libyan Arab Jamahiriya on the North African coast. A large number of both male and female U.K. employees work there and happily and regularly commute home, or are resident with their families. AGOCO, with a production capacity well in excess of 1 million bpd, is in the process of reviewing its systems and hardware strategy with a view to replacing all current commercial and operational systems on new hardware and we have been retained to recruit high calibre:

Project Leaders

Successful applicants will initially assist in the development of this strategy and then participate in detail system design and implementation. To meet the demanding standards required you will need 7 to 10 years experience in Project Management and have worked with both mainframes and minis. You will also require good communication skills and the ability to work at all levels of management. Experience in the oil industry is obviously essential.

BENEFITS
Family status based in Benghazi with fully furnished accommodation and services provided at company cost. A generous negotiable salary (to be discussed at interview) 90% of which is fully remissable: 28 days annual vacation to point of origin with paid air fares for employee and dependants. Special interim leave to Athens also with paid air fares. Relocation allowances.

We invite you to submit your resume and you will be sent an obligatory application form to fill. You should quote the job reference number on all communications.

You need not apply if you lack the qualifications advertised. Any irrelevant applications will not be answered.

JAWABY OIL SERVICE

UMM AL-JAWABY OIL SERVICE CO. LTD.,

Recruitment Co-ordinator, Job Ref. AG/11. 33 Cavendish Square, London W1M 9HF.

Analyst/Programmer

c.£10,500

Our client is a manufacturing company within the light engineering industry, part of an international group which is itself a public company. Their very well-established DP department (small, friendly and closely-knit) already has a good reputation within the company, having successfully implemented both major and minor projects, which include the accounting functions and order-processing. They are currently undertaking Production Control/Inventory Management, which will be both on-line and Database.

- NCR 8555 • VRX COBOL
- TRANPRO • TOTAL

For this position we are looking for 2-3 years' experience gained in a similar VRX COBOL environment. You will be responsible for your own project, or part of a project, from start to finish, including specification writing and user liaison. Implementation skills are particularly important.

Fed up with the commuting rat race?

Work in Windsor

Our client, world leading manufacturers of micro-based office automation and word processing equipment, wish to expand their development team during the evolution of an exciting new range of products.

Successful applicants are likely to be aged between 25 and 35 with a minimum of two years' relevant experience.

The company's Systems Division, which is responsible for applications and communications programming for a world-wide market, situated in the pleasant surrounds of Windsor, offers excellent working conditions in an informal yet highly professional team environment.

The competitive level of remuneration includes generous salary and bonus scheme, and a first class benefits package including pension plan, life cover and medical insurance.

Communications Programmers/Development Programmers
(four vacancies) to £13,000 pa plus company car.

A sound assembler background or exposure to a block structured language (eg PASCAL), gained from a real-time systems environment is required for developing Office Automation, Word Processing, Communications, Electronic Mail, Electronic Filing, Compilers/Interpreters and Operating Systems.

Product Support Specialist to £10,000 pa

This position involves the evolution, development and testing of new and existing programs, in addition to promotional and post-sales support. Whilst experience and versatility are important, the successful applicant must be willing to gain a detailed knowledge of the company's products and to specialise within the group's activities.

Technical Writer to £9,500 pa

Due to the increasing number of development projects, an additional writer is required by the technical publishing group with the Division. The job entails liaising with programmers on specific projects with a view to providing accurate and readable User and Support documentation.

Please apply with curriculum vitae or telephone George Shaw on 01-549 9236 (24 hour answering service) for an application form.

SPI International

ANALYST/PROGRAMMERS
to £14,000

SPI International is one of Europe's leading systems and software houses. Our Information Systems Division is currently seeking Programmers and Analysts to join them in the design, development and system testing of several sophisticated applications. These systems are developed to the highest professional standards, using advanced implementation techniques. The projects are based in London, however opportunities also exist for overseas assignments.

Applications are invited from Programmers and Analysts with sound knowledge and experience of Cobol, preferably in a banking or financial environment. Successful candidates will receive an excellent salary which will reflect both your own experience and the importance of these projects.

JAS89/1

TRAINER

£ attractive

Our client is a progressive training and applications software house. Their specialised areas of experience lie in the fields of financial planning, word processing and database management utilising a broad range of microcomputers. Increasing demand for the company's products and services has created a requirement for a Trainer who will be responsible for designing and implementing customer training courses. Specific areas of interest will be a knowledge of financial management planning systems (ideally Multiplan, Visicalc and SuperCalc) and word processing systems. The ability to write technical manuals will be necessary and experience of IBM PCs, OPM and Basic would be a definite advantage. Our client will offer an attractive salary and opportunities for career development as the company grows.

ICL

DESIGNERS & IMPLEMENTATION

SYSTEMS

The ICL Retail Hardware Centre in Brentford provides total systems solutions to clients who range from the high street shop to the vast hypermarkets.

It's a business area that's rapidly expanding and ICL are currently expanding RPTs; new PC terminals, communications networks and sophisticated business applications.

This in turn has created some exciting opportunities for Designers and Implementers for System 36 in Retail environments and with ICL staff professionals can expect some exciting rewards and benefits.

Join the Retail Hardware Centre. You should have at least 18 months' experience of System 36 programming and be able to design, develop and implement systems in this challenging environment.

For this position we are looking for 2-3 years' experience gained in a similar VRX COBOL environment. You will be responsible for your own project, or part of a project, from start to finish, including specification writing and user liaison. Implementation skills are particularly important.

Ready for full M.R.P. project responsibility?

East Midlands

c £10,500
+ Relocation

Our client is a highly successful manufacturing company located in one of the most attractive areas of the East Midlands, offering low cost housing and excellent amenities.

The company has successfully implemented modules of a sophisticated Manufacturing Resource Planning System, and is now embarking on the next major phase.

This is a key appointment, offering considerable scope for a creative analyst to make a measurable contribution to the company's profitability.

The successful candidate will have at least five years' data processing experience and will have successfully implemented at least one major project using an M.R.P. system. Knowledge of TOTAL database would be an additional advantage.

For further details, please contact Barry Turton on (0270) 627206 weekdays, or Alsager (09363) 4743 during evenings and weekends, or write to him at the address below.

Our client is one of the world's leading Management Consultancies which specialise in Government, Industrial, Commercial and Financial sectors.

Due to current expansion the Company expect to increase its staff considerably over 1984.

They are seeking Data Processing Specialists who wish to broaden their experience and work in a professional and stimulating environment.

This is an excellent opportunity to become involved in projects that include:

- * advising on computer strategy, selection, performance, security and feasibility, project management of new systems.
- * a variety of products and hardware.
- * a wide range of applications.
- * clients from multinationals to small companies.

Successful applicants will have a good educational background, preferably to degree level and demonstrate a successful career to date. Equally important to your experience is your personality and communicative skills.

If you are interested in building an exciting career then contact Tim Nicholls quoting ref 7480. (7283)

Lloyd Chapman
Associates

Join the High Flyers
in Shropshire

We are a highly respected market leader in the consumer goods sector with a reputation for quality products that are enjoyed by a wide customer base. These products, together with innovative press and TV advertising, have elevated us to a very strong position within world markets and further growth is envisaged in 1984.

Within the next few months, we will be relocating our IBM System 38 facility from the City of London to Shropshire and we therefore now wish to recruit several experienced personnel with the knowledge and flair to make this move as smooth and efficient as possible and to contribute to our future success.

Programmer
c £9,500

Our first requirement is for a Programmer, probably with at least eighteen months experience on IBM GSD facilities and with an in-depth knowledge of RPG II or RPG III.

Initial involvement will be on order entry and distribution systems, but you can expect exposure both on development and maintenance in a variety of applications.

Operators/Programmers
c £8,500

We also wish to recruit two young Operators with some experience of IBM RPG programming who are keen to develop their skills in a progressive environment. After initial training in London, the successful Candidates will be given early exposure to a number of applications.

The excellent remuneration packages include four weeks annual leave, pension, life assurance cover and private medical insurance. Generous relocation expenses will be paid where necessary. These, combined with the very affordable housing and fine quality of life you can expect in Shropshire, make this an opportunity not to be missed.

To arrange a prompt and confidential interview, please contact our Advising Consultant, Jim Mitchell on 021-236 3781 (24 hour answering service) or on 021-427 2291 (Evenings and Weekends until 9.00 pm).

SENIOR ANALYST/PROGRAMMER

HP 3000 **£13,000**

Our Client is a Central London based financial concern, part of a UK multinational group. They currently utilise an HP 3000/40 but will be upgrading shortly to a 3000/42. Due to expansion within their market they wish to appoint a Senior Analyst/Programmer to take responsibility for existing and future systems development.

Applicants, probably in their late 20's or early 30's, will have a sound background in COBOL with some exposure to systems analysis. Any knowledge of HP systems and software will be advantageous although not essential as management ability is the essential criteria. The successful candidate can expect a high degree of user contact and must therefore be an effective communicator at all levels.

In return our Client offers a generous starting salary with the possibility of a company car and a move into a management position at an early stage. If you are self motivated and looking for a challenge in an expanding environment, call Mike Harmer for further details.

Advanced Software Systems

Support/Systems Programmers

Essex

We are a specialist technical centre within the ITT corporation building software tools to support the development of large and complex software systems to be incorporated in ITT Products. We have a local IBM mainframe running VM/CMS, and also use large MVS/TSO/SPF centres in Harlow and overseas, mainly in Belgium and North America, via our extensive data communications network.

Due to the rapid expansion of our activities, we now need two additional Support/Systems Programmers in our technical support group. Sound VM experience is essential. A knowledge of MVS would be advantageous.

The aim of the group is to assist the ESC's application programmers to concentrate on their

trade, not the mechanics of producing code. It has particular interests in SCRIPT/DC/VSAM, PL/I, ACF2, 6670 laser printer and videotex.

Salary as indicated will reflect ability and experience in addition to this there is an attractive benefit package. Opportunities exist to expand your skills within ITT's worldwide organisation. Generous assistance with relocation will be given where appropriate.

If you are interested and wish to apply for one of these positions, please send a full C.V. to Mary Richards, ITT Europe Engineering Support Centre, Great Eastern House, Edinburgh Way, Harlow, Essex, CM20 2BN.

ITT Europe Engineering Support Centre

L.E.R.S.

The pharmaceutical research company of the SYNTELABO group is recruiting

2 Computer scientists

to work for their Clinical Research department

one, who will be responsible for a HP 1000 handling real-time data acquisition from laboratory instruments (HPLC, GC, etc.) and will develop scientific and graphic software for the analysis of these data.

he or she will also be responsible for the maintenance of existing programs and the installation of telecommunications links between the HP 1000 and other computers.

Place of work: Paris and suburbs. The other, who will be responsible for office automation and telecommuni-

cation problems within the department. he will be in charge of: word processing training, user support and the transfer of documents between HP, WANG and SIRIUS; use of all graphics tools used in document preparation and aid to users; transfer of information between HP 3000, VAX, PDP 11, WANG, IBM 43XX.

he or she will also have to maintain and create diverse databases for use within the department.

Both candidates should have a university degree, be familiar with the mini-computers HP 1000/HP 3000, be aware of the problems relative to databases (relational) and their maintenance, and have some professional experience.

Send CV with photo and references to: L.E.R.S., Département Administratif et Technique, 58-60 rue de la Glacière 75013 Paris.

EXPERIENCED SYSTEMS ANALYSTS & PROGRAMMERS

up to £10,500

+ Benefits

The Leicester Building Society is one of the UK's largest and most progressive Building Societies. It has a purpose-built computer centre at its Head Office in Oakby, Leicestershire, LE19 1QD. Systems have been installed and are handling real time and database systems development in an expanding national network of over 300 branches.

We are seeking to appoint both experienced Systems Analysts and Programmers with a minimum of 18 months' practical experience who are looking to extend and expand their skills in a challenging environment.

Programmers must be familiar with Burroughs equipment. Competitive salary packages of up to £10,500 are offered for these positions depending on experience and qualifications. In addition there is an excellent benefits package, including Concessional Mortgage and Contributory Pension Schemes.

Persons wishing to be considered for these vacancies should apply in writing to Neil Watt, Personnel Officer, Leicester Building Society, Chief Office, Glen Road, Oakby, Leicestershire LE12 4PF. Closing date for receipt of applications is 3 February 1984.

COMPUTER PROGRAMMER

Thorntons, the well known quality confectionery manufacturers are looking for an experienced programmer. Candidates (male or female) should have considerable programming experience using COBOL, and familiarity with Hewlett Packard 3000 hardware would be an advantage. We offer an attractive salary, excellent working conditions and a full range of facilities. Please telephone or write for an application form to Executive Manager/Personnel, J. W. Thornton Limited, Derwent Street, Belper, Derby DE5 1WP. Tel: Belper (077 382) 4181.

Computer Audit

A Challenging New Opportunity

North West

c £13,000
+ Profit Sharing

The Company

Our client is a major international blue chip Group in the financial sector, with an expanding and diversified D.P. function operating in a mainframe, mini, and personal computing environment.

The Position

This new management appointment will have responsibility for audit activities across all areas of computing, embracing the review of existing and proposed systems, the introduction and maintenance of operating standards and controls, including the security aspect and the evaluation, development, and implementation of appropriate audit software.

Candidates

Will ideally be well educated self-starters in the age range 27-35, with a financially orientated D.P. background in analysis and programming, with good communication skills and experience of computer audit. Success in this specific area could lead to other career opportunities within the Group as a whole.

Benefits

In addition to salary, the benefits package includes a subsidised mortgage, excellent pension scheme, and generous relocation expenses where appropriate.

For further details please ring Tony Roberts on (0270) 627206 during the day or (0270) 624068 evenings and weekends.

OPPORTUNITY IN DATA COMMUNICATIONS

for experienced data communication engineer with commercial interest in becoming our

U.K. SALES ENGINEER/ SALES MANAGER

The product we are going to sell is a new generation protocol converter and associated equipment, manufactured in Holland.

More than one thousand units were ordered in the first year of sales in Holland and Germany.

The man we are looking for must be familiar in great detail with asynchronous and synchronous protocols such as IBM BSC/SDLC, Burroughs poll/select, etc. and must be able to quickly familiarise himself with all aspects of (RS232 based) data communication procedures.

His commercial interest and management capabilities should enable him to simultaneously build up and take full responsibility for our U.K. operations. Drive and ambition are absolutely essential.

Having a representative house in the vicinity of London with a spare office room and telephone to start operations would be an asset.

Our proposal:

- A fixed salary plus percentage of the U.K. result
- Company car and expenses
- Reasonable refund for office space and telephone (if available)
- Two to three months' training in Holland (one-year trial period)

If you are interested, write and supply us with the following details:

- Education, experience, references, photo and personal data
- Location of your house and description of the office (if applicable)
- Remuneration salary and emoluments

We set the Technological developments. You set-up the Software Department.

Southampton **£13,000**

The quality of our range of High Tech' medium tensile test instrumentation and recorders has won us international respect and a reputation for being market leaders. Because of our successful growth, we are going to handle all software projects in-house which now creates a key opportunity for a Software Project Engineer, a position eventually leading to setting up a Software Section.

Reporting to the Technical Director, you will be handling a variety of assignments including establishing and maintaining current software based products. Investigating modifications and possible product improvements to customer specifications you will study plans for new product designs and concepts. The position offers the challenge of setting up a comprehensive software information library. Future projects will include looking into new fields of optical analytical techniques for the chemical industry and the design of variable speed controls.

Aged 25-30, qualified to HNC/HND in a relevant science discipline, you'll have at least 3-5 years' similar experience of microprocessing systems such as Z80, Motorola 6802/6809 and Assembly Code. A salary of £13,000 and relocation assistance where appropriate is offered with this tremendous opportunity for a young Software Engineer ready for a career move to a company, who, like our industry, is constantly making technological advances.

Please phone or send your CV to our recruitment specialist Anita Reynolds at PER, 68-64 High Street, Southampton, Hants. Tel: (0703) 38211.

£32,400

Tax-Free in the first 2 years

Computer Instructors

British Aerospace has vacancies in Saudi Arabia for experienced Computer Instructors to join its staff at the Technical Studies Institute at Dhahran, where they will be responsible for training Saudi personnel in the programming and operation of modern computer systems.

If you have the qualifications and background of experience set out below, you could earn at least £15,831 in your first year, £16,581 in your second year *tax-free*, as a Computer Instructor...

...working in Saudi Arabia with BRITISH AEROSPACE

Responsibilities include providing students with a thorough grasp of the principles of computer programming and operations and preparing computer systems programme routines and procedures. Successful applicants will be required to give instruction in Cobol, machine coding, test routines and programme verification; operation of computer equipment and peripherals; and processing and control of data flow.

Applicants should have graduated from an appropriate civil or military Technical Training Institute, having gained HNC or equivalent in Engineering, Computer Sciences or Mathematics. They should be able to show at least 3 years' recent programming experience relevant to the Hewlett-Packard HP3000-44 computer installation which is the current equipment, using Cobol and Interactive Data Processing. Candidates must be familiar with modern computer-based training techniques and must have gained at least two years' experience as instructors in the past five years.

In addition to the high *tax-free* salary, successful applicants will receive free accommodation, messing, medical care and other benefits, including travel-paid UK leave.

Please apply in writing giving brief details of appropriate experience or telephone Preston 634317.

RPG III

A success story in Shropshire

We are a highly respected leader in the consumer goods sector with a reputation for quality products that are enjoyed by a wide customer base. These products, together with innovative press and TV advertising, have elevated us to a very strong position within world markets and further growth is envisaged in 1984.

Within the next few months, we will be relocating our IBM System 38 facility from the City of London to Shropshire and we therefore now wish to recruit certain key personnel with the knowledge and flair to make this move as smooth and efficient as possible and to contribute to our future success.

Systems Analyst c £12,000

The successful applicant will become an integral part of our small team, actively involved in projects from initial user contact, through systems specification and design, to programming and implementation. At least two years systems experience combined with a strong exposure to IBM System 34 or System 38 equipment is essential. Personal skills are equally important and self-motivation, resourcefulness and good powers of communication will ensure personal and professional credibility when dealing with both Data Processing staff and senior user management.

Analyst/Programmers c £10,500

We also wish to recruit two experienced Analyst/Programmers with an in-depth knowledge of programming in IBM RPG and probably with at least twelve months analysis experience on GSD equipment. The successful Candidates will be capable, not only of meeting deadlines with the minimum of supervision, but also of exhibiting a positive yet flexible attitude to their work.

The excellent remuneration packages include 4 weeks annual holiday, immediate life assurance cover, pension scheme and private medical insurance. Full relocation expenses will be paid where appropriate. For an immediate and confidential interview telephone our Advising Consultant Jim Mitchell on 021-236 3781 (24 hour answering service) or 021-427 2291 (Evenings and Weekends until 9.00 p.m.).

Following a major review of its requirements, the company has identified the following career opportunities:-

Team Leader Circa £12,000

The successful candidate will lead a team of around six programmers working on a variety of management information systems, primarily developed on a powerful mini-computer. It is likely that he/she will have at least five years programming experience including some staff supervision. The person appointed will be responsible for imposing and maintaining programming standards within the team, and knowledge of structured programming techniques would be of particular interest.

Senior Programmers Salary between £9,600 and £11,300

These positions represent excellent opportunities to join small project teams engaged on a range of commercial systems. The company offer a stimulating working environment developing systems on-line and using database.

Candidates for all positions should be able to demonstrate sound Cobol skills, gained on any equipment, either mini or mainframe, preferably in an on-line environment using database techniques. Full training will be provided to familiarize the successful candidates with hardware and software.

Career prospects and conditions of employment are excellent, including flexitime, 37 hour week, over six weeks holidays and a relocation package where appropriate.

Real Time Software Specialists

Farnborough, Hants. To £13K

Real Time Developments is an independent systems house specialising in high-quality real-time software systems. We have an immediate requirement for a number of real-time software specialists to enable us to expand in line with our plans for 1984.

The people we are looking for are preferably graduates with two or more years experience in any real-time applications. Experience should have been gained on minis or micros, with knowledge of both assembler and high-level languages.

Apart from a highly competitive salary, benefits include BUPA, health assurance and paid overtime. The company offers ample scope for genuine career advancement, with employees being encouraged to assume responsibility as soon as they are ready for it.

1984 holds great promise for RTD; why not be part of our success story? For more details contact Geoff Burnes on Farnborough (0252) 846213 or write to

Real Time Developments Ltd.,
Lynchford House, Lynchford Lane,
Farnborough, Hampshire, GU14 6JA.

Ferranti Computer Systems Ltd.

Lecturer Computer Hardware

A computer professional is required as a hardware lecturer in our expanding Technical Training Centre at Bracknell.

The person appointed will be required to contribute to the teaching of microcomputer technology and real-time computer architecture as applied to the Company's wide range of military-computer products.

Applicants should possess relevant professional qualifications and/or experience. The possession

of a teaching qualification would be an advantage but is not essential as guidance in lecturing techniques would be provided.

As you would expect of a major international company, we are offering attractive salary and benefits packages, which include assistance with relocation where appropriate.

If you are interested please contact the Recruitment Section at Ferranti Computer Systems Ltd, Western Road, Bracknell, Berks. RG12 1RA. Tel: Bracknell 483232, ext. 3471. Please quote ref. B/1063/CW.

SYSTEMS DESIGNER/ANALYST

to £14,000 per annum.

We have an interesting opportunity for a talented designer to join a growing systems house based in the City.

The application areas are mainly financial and it would obviously be an asset if candidates had previous City financial experience, however we do not rule out the likelihood of proposing candidates from other backgrounds.

This position will suit a d.p. professional who is either currently a systems analyst/designer or alternatively an analyst programmer who wishes to move into a more demanding role.

If you feel that you have the personality and strength of character to handle a challenging role in a fast moving environment then please contact Chris Morrow on 01-837 0461 for further details.

CUSTOMER SUPPORT

Support Technicians £10-14K Plus Car

To work within the Customer Support Department providing both pre and post sales solutions. Successful applicants should possess good communication skills and a wide knowledge of 8 and 16 bit micro computer systems preferably at a software development level. These challenging positions offer the career minded individual the chance to gain total support experience covering such aspects as pre/post sales technical enquiries, troubleshooting and the organising/presenting of demonstrations and seminars.

SOFTWARE DEVELOPMENT

Software Engineers £8-14K

To join the Company's highly skilled and resourced development team working with MSDOS, UCSD P-System and CPM family operating systems. Successful candidates should have sound operating systems level experience of 8088, 8086 and 6502 microprocessors together with 8086 machine code, CPM/86 and PC-DOS/MS-DOS. Additionally, experience of APPLE native operating systems and the UCSD P-System would be desirable. Stretch your system skills to that limit as you design and implement high level (PASCAL and 'C') utility software, low level (8086, 68000 and 6502) operating systems and BIOS interfaces.

All positions advertised provide unparalleled career opportunities for both technically orientated and management seeking candidates.

For further information please contact **Adrian Hardy** on **01 835 0671** (24 hour answering service) or **Walton-on-Thames (0932) 224766** evenings and weekends.

Independent Computer Engineering are market leaders in the field of intelligent mass storage/multiplexing and data back-up products for the microcomputer industry.

Since their formation, when they launched the first UK designed hard disk for the APPLE market, ICE has been instrumental in solving the problem of shared mass storage within the micro computer arena.

The turnover for 1983 was 300% up on that of 1982, and with the recent announcement of yet another innovative product range, ICE can now justifiably claim to be a major force within micro computing technology.

1984 heralds yet another year of expansion with impressive in-roads being made in local area networking, hard disk interfacing and micro-computer support.

To enable such an extensive development programme to run smoothly, high calibre, dedicated and determined computer professionals are needed now within the following technical areas:-

QUALITY ASSURANCE

G.A. Controller - Hardware £13K Plus Car

A unique position within the ICE Organisation. The successful candidate must possess a digital electronics background, ideally having worked for an equipment manufacturer, with a proven track record in hardware quality assurance. Initially heading up a small team of test engineers, planned growth within this department in 1984 is exceptional. For the right individual the scope is limitless, with an initial brief that includes responsibility for budgeting, equipment selection and establishing test procedures. The position interacts with field service, third party maintenance sources, development and suppliers.

QUALITY ASSURANCE

Test Engineer £9-10K

Working within the Testing Department, this position would suit a candidate with supervisory potential. A knowledge of 6502 and Z80 microprocessors is sought together with a knowledge of VLSI and TTL. Provides exceptional opportunity to develop one's career utilising the latest technical equipment in micro technology.

HARDWARE DEVELOPMENT

Hardware Engineer £12-14K

To work within the Hardware Design & Implementation Group. The successful applicant must have solid design experience of either 8 or 16 bit micro computers and be capable of providing efficient, low cost reliable solutions to design problems. Duties to include the design and implementation of micro computer network controllers for tomorrow's micros thus helping ICE to implement advanced network architecture within the micro computer field.

At the Centre of Development

The Information Centre concept grew from a need to provide users with a method for developing their own applications within a controlled environment utilising information and personal computing systems compatible with existing IBM architecture. We have established this concept, as ideas for new systems dedicated to specific applications can often be identified by users with practical experience of the job. In many cases however the relative simplicity of developing such applications does not merit the full project cycle. Instead the users can access the Information Centre for consultancy support and guidance on software tools along with educational and training support.

To ensure effective utilisation of the Information Centre we are building a team of specialists to link user requirements to the Information Systems Department. We now require a DATA SPECIALIST to augment the team.

Arthur Young McClelland Moores & Co. provide clients with a full range of accountancy services including consultancy. The firm has over 160 partners and more than 2,200 professional staff operating from 21 offices located throughout the country.

Arthur Young McClelland Moores & Co.
A MEMBER OF AMSA IN EUROPE AND ARTHUR YOUNG INTERNATIONAL

Analyst Programmer (Data Specialist)

We are seeking an analyst programmer, with database experience, to fill the role of Data Specialist. Responsibilities include managing the effective use and relevance of data resources, defining data requirements for end user applications and providing copy management facilities. In addition the Data Specialist will prepare data for manipulation by end user computing tools, so the ability to assess suitable software tools is required. The capacity to develop and implement education aids is necessary.

You should have four to five years programming experience with a sound Cobol background in at least two hardware environments one of which should be IBM, preferably 4341. Knowledge of high level languages such as RPG II, Easytrieve and database, such as DL/I, Total or Adabas is required, along with the ability to present the Centre's services to users.

Salary To £14,000

COMPUTER AUDIT

Senior Auditor Data Processing

BATH up to £12,144
A Senior Auditor (D.P.) is required to replace a recently promoted member of a small team based at Sydney Wharf, Bath.

The person appointed to this position will be engaged in:-
[i] Appraising the soundness and adequacy of operational procedures within the Computer Department.

[ii] Assessing the adequacy of controls in both developing and existing computer applications.
[iii] Writing file interrogation programmes for audit purposes.

He/she will be responsible to the Assistant Audit Manager (Data Processing) but will work largely independently on investigations and report preparation for discussion with senior management.

Accounting experience in a computer environment with familiarity with operations, systems design and programming is essential.

Salary will be within the range £10,499 - £12,144 and the benefits normally associated with a large, progressive organisation will apply including, where appropriate, relocation expenses.

Application forms can be obtained from:-
Recruitment Officer, South West Gas, Riverside,
Temple Street, Keynsham, Bristol BS18 1EQ.
Telephone (02-736) 61717 ext 3577.

Closing date for applications: 3rd February, 1984.

FOR PROGRAMMERS

OPPORTUNITIES IN

COMMUNICATIONS

£9-£13.5K

Camden, Surrey

Communications is the fastest growing and most exciting sector of the computer industry. Our client is continually demonstrating its expertise in the implementation of voice response, viewdata and associated communication and network systems. This has led to an impressive list of major companies throughout the UK and Europe who have chosen our client's products as the best available for their needs.

Opportunities have arisen for a Senior Programmer and Programmer to become involved in the development of exciting new communications products. Those seeking real responsibility will see projects through from feasibility to implementation and have the opportunity to provide some sales support to customers.

Working in a small, friendly and informal environment will ensure that endeavour and application are instantly recognised and subsequently rewarded.

Experience of communications software development is essential for the more senior position. Successful applicants will have:-

- Experience of Assembler languages, preferably DEC MACRO 11.
- Minimum of 2 years software development.
- High level of motivation.

Company benefits include regular salary reviews, excellent career prospects, free family medical insurance, generous pension scheme and relocation assistance where appropriate.

For further details please telephone Keith Taylor on Reading (0734)

IBM

IMS PROGRAMMERS AND ANALYSTS

TO £16,000 + BENEFITS

One of the leading Banking organisations is currently looking for IMS specialists to work in their development area on large financial systems. Candidates should have a proven track record using IMS DB/DC and have programming in COBOL and/or MKIV languages. Previous banking experience in a related environment would be highly advantageous. Ref: 16/CW

IBM BUSINESS ANALYSTS

£10,000-£15,000

A large Engineering Company based near Central London wishes to recruit Commercial Analysts with two to four years' experience based on IBM MVS systems. You will have come from a programming background using COBOL and ASSEMBLER and probably CICS. The position would necessitate exposure to LOGUS and though this is not obligatory, it would be a decided advantage. Ref: 17/CW

IBM DATABASE ANALYSTS

TO £14,000

This financial organisation is looking for experienced Database Analysts and Coordinators with a sound knowledge of the IBM DB/DC and related facilities. You will have experience in the design and development of a database and will be responsible for the design and development of a database. Ref: 18/CW

IBM SYSTEMS DESIGNERS

£10,000-£13,000 + BENEFITS

Four full and states major IBM users are looking for DP with at least two years' experience in a systems and design. A programming background using PL1, AS/VS1 or MVS systems is preferable. Due to the nature of the work, it is essential that you have a sound knowledge of the IBM 4180 and 4190 systems. Ref: 19/CW

GSD PROGRAMMERS & ANALYST PROGRAMMERS

£8,000-£13,000 + BENEFITS

Three large financial organisations are looking for experienced GSD Programmers and Analysts with a sound knowledge of the IBM 4180 and 4190 systems. You will have experience in the design and development of a database and will be responsible for the design and development of a database. Ref: 20/CW

ROAD TRANSPORT INDUSTRY
TRAINING BOARD

SYSTEMS ANALYST

SALARY: £12,027 p.a.

The Board requires a Systems Analyst to join a small team at its Wembley Headquarters. An ICL ME29 (1Mb, tapes and discs) working under TME has recently been acquired.

A major restructuring of the Board has necessitated re-examination of all applications and many are being re-written rather than converted. In addition packages are being evaluated for the accounts, sales and purchase ledger systems. Whilst the successful applicant will be involved in a wide range of systems the first task is likely to be the implementation of this package and experience in accounting systems will be an advantage. The need for a small amount of COBOL programming occasionally arises.

Terms and conditions of employment include 20 working days holiday eventually rising to 25, contributory pension scheme and life insurance, a 35 hour week and Luncheon Vouchers.

Please telephone the Personnel Department for an application form on 01-902 8880 ext 334.

Norsk Data is a rapidly expanding manufacturer of 18 bit minis and 32 bit superminis with our European and UK Headquarters based in the Berkshire town of Newbury. We also have a rapidly growing R+D activity at Newbury and are looking for self-motivated individuals to expand our

ADA COMPILER DEVELOPMENT

The successful applicants would be able to look forward to a demanding and interesting career in the development of complex software. They will have a good education and at least one year's experience in compiler development, preferably with a manufacturer or software house. They should be able to work in small teams and accept responsibility for their work immediately.

The standards we set are high, and the salary will be commensurate with experience and ability. The company also provides help with re-location, private health insurance, contributory pension scheme, subsidised canteen and generous holiday allowance.

Team Leaders · Senior Engineers · Electronics Engineers & Real-Time Software Specialists

Our investment in communications will...

Make 1984 the year you joined one of our small teams of multi-disciplined Engineers at New Southgate. There you'll be working in a stimulating environment alongside highly skilled professionals with a mission to take up the challenge of tomorrow's communications systems and expand our business in the highly competitive UK and overseas markets.

We are currently involved in several of the most interesting telecommunications projects of the future which must inevitably evolve into fully integrated information delivery systems optimised for both voice and data. Among

these STC's new digital telephone switching system, already of proven international performance, is now undergoing extensive UK software design, development and adaptive engineering.

While the course of the Information Revolution can be defined in broad contours, it cannot be predicted in detail. Whatever predictions are made today are bound to be overtaken by accelerating technology and shifting demand. What is predictable however, is the need for a number of key men and women to join us in a variety of functions:

...take your career into the 21st century now...

Take the most important step in your career by telephoning us on 01-368 1234 and asking for Vaughan Hartridge on ext. 2215 or Roger Edmonds-Brown on ext. 2579.

Alternatively, phone Vaughan Hartridge on St. Albans (0727) 60043 or Roger Edmonds-Brown on 01-361 2931 on any weekday evening (between 8-10pm) or Saturday or Sunday morning. If you prefer, write with full details of your experience to: Vaughan Hartridge, The Recruitment Centre, STC Telecommunications Limited, Oakleigh Road South, New Southgate, London N11 1HB.

Software Designers Analyst/Programmers & Programmers for our Software Development Team and Online Project Teams

The Company

Telecomputing has, over the last ten years, established an enviable reputation as a leading independent software house. Our main product, TPS, is used at 450 installations around the world. TPS provides a complete transaction processing environment which is unique in the facilities and portability it offers to its users.

Another very important part of the Telecomputing operation is our Client Services division. This provides consultancy, design and programming services to our customer base. We specialise in turnkey projects providing first class systems on time and on cost.

Telecomputing is now recruiting more people to help us achieve our exciting objectives. We need designers and software programmers to give us the extra capacity to produce the software products that are needed to overcome the applications backlog and allow our users to realise the full potential of their hardware.

Our client services team is experiencing unprecedented demand for its resources, so we need more people capable of designing and producing the excellent systems which are the foundation upon which we have built our success.

The Rewards

Salaries are highly competitive as you would expect from a leading software house.

The company actively encourages career development and provides an exciting range of opportunities for people who can accept a challenge. Our new Oxford offices provide first class working conditions and our development hardware which comprises ICL ME28, 2966 and IBM 4331 ensures the right resources for producing software to schedule.

The Next Step

Is to telephone or write to:

Terry Kirk
Telecomputing plc
244 Barns Road
Oxford OX4 3RW
(0865) 777755

The Requirements

Software Designers: we need people capable of making an original contribution to the design of our new products. Previous experience of software design is desirable but not essential. Knowledge of any of the following areas would be relevant: Applications generators, relational database, IKBS, MM, DSS.

Development Programmers: we require career programmers, preferably with experience of assembly level programming, but if not good experience of a BCPL like language (C, PASCAL, S3) is essential. Based in Oxford the jobs are in a team where all individuals must be able to solve problems and program their solutions.

Consultants/Analyst Programmers: Based in Oxford or London we require people with experience in On-line systems with a mainframe COBOL programming background (ideally IBM or ICL) who are capable of designing and leading a team to produce innovative systems to commercial time-scales.

Programmers: Based in Oxford or London these people must have at least two years' IBM or ICL COBOL experience preferably in an on-line environment. Much of our work is carried out on clients' sites so a willingness to work away from home is essential.

STOP PRESS

Trainee Programmers: Must have had some experience of COBOL and leading a team. Based in our Manchester office, preference will be given to local applicants who will not object to long periods working on client sites away from home.

Telecomputing

SOFTWARE EVALUATION & HARDWARE PROCUREMENT Have you the talent to command £14,500 p.a.

British Telecom are now in the market for a number of essential talents to work in London. We are looking for a heavyweight Software Analyst together with a support team of ICL 2900 experts plus other professionals with specific experience of datacom systems assessment. All will play a vital, pivotal role — analysing, recommending, ordering and installing hardware and software. When we reveal that a typical project involves 100 different sites, you get some dimension of the size, scope and sheer technical challenge of this assignment.

Take a closer look... SENIOR SOFTWARE AND HARDWARE ASSESSOR

An expert in programming (essentially COBOL) who also possesses a wealth of IBM and ICL mainframe experience. A genuine, hard-nosed professional who can assess software performance and hardware specifications against stringent BT benchmarks. A true manager who can confidently liaise with manufacturers and users alike. Above all, an agile intellect who can weigh up the merits of every potential product and then make mature, incisive judgements.

If you have the essential experience and technical reporting skills we're offering up to £14,500 now... and prospects of considerably more.

HARDWARE & DATACOM ANALYST

Slightly younger professionals — in their early to mid twenties range — with surprisingly mature manners. People with a genuine fascination for computers and powerful grip on all the latest hardware developments. We

are particularly interested in meeting people with two very specific areas of experience. Some will have a detailed knowledge of ICL 2900's, others will specialise in network design, Modem, Multiplexer and datacom systems procurement.

If you have the right technical and reporting talents, the salary could be up to £12,000.

Final word from me!

Ring us now and meet BT's Hardware and Software Evaluation team in Central London next week. We're looking into....

Data Processing Executive

British Telecom

Analysts/Senior Analysts Salaries to £12,000

We are a highly successful organisation, with substantial reserves and able to demonstrate considerable growth within our industry.

An integral part of our success to date is due to the effective use of computer technology throughout the Organisation and a firm financial commitment to expand this activity which will include the introduction of the latest sophisticated systems to further improve our efficiency.

Senior Systems Analysts £12,000

You will have total responsibility for a team of Analysts engaged in the development of systems for a specific user area combined with day to day supervision and control of projects.

You should have successfully completed a degree in the field of systems, from inception to implementation, have recent project management experience combined with the professional interpersonal skills necessary to liaise at all levels within an Organisation.

You should have a minimum three years experience in a similar position within a commercial mainframe environment and experience of initial and subsequent software development would be a distinct advantage.

Systems Analysts £11,000

Working within a professional environment with substantial reserves and a high growth Organisation, demand for professional staff is high. We are currently seeking individuals who can make a good spell in the Organisation.

You should have a minimum three years experience in a similar position within a commercial mainframe environment and experience of initial and subsequent software development would be a distinct advantage.

Would you like to join a Winning Team?

Top Salaries — Top Sales Commissions — Top Systems & Programming Salaries

Pick the Job For You — Up to £50,000!!!!

Honeywell & ICL clients

The best Minis in the UK.

Top New Micros.

Customer enquiries unrivalled anywhere.

The Top System Builder Stand at Which Computer? Show.

Sales Managers & Salesmen to £50,000 pa.

Project Leaders and Managers to £14,000 pa.

Analyst Programmers to £10,000 plus early promotion.

Our clients include Manufacturers — Distributors, Stockists, Oil Companies, Vehicle Leasing etc, etc, etc.

SALES MANAGERS AND SALESMEN

— UP TO £50,000 EARNINGS CAPABILITY

We are inundated with top quality leads and serious business opportunities. As such, we urgently seek a number of experienced Business Systems salesmen, with a proven, demonstrable track record of closing business, to join our rapidly expanding company as a Public company subsidiary.

Tradewinner offer a wide variety of Package and Custom built software running under Honeywell and ICL equipment. Negotiations are also in progress with a number of leading micro manufacturers. We seek candidates with the ability to produce demonstrable, undertake initial feasibility studies, prepare a high quality tender, supported by a first class Systems Design team, and present an effective business case at Board level.

Excellent graphic aids are available. Equally, a first class reference base is already established throughout the entire UK. We are flooded with sales enquiries and actively market to provide top business opportunities for our companies. Outstanding opportunities exist for all categories of proven sales staff with early Board prospects for senior top performers. Equally, for developing salesmen, with the professional and commitment, opportunities to triple your earnings are uniquely available via Tradewinner. Either apply immediately for Birmingham interview, or visit us on the stand at the Which Computer? Show. If you've got the ability, we've got the quality of leads you've never seen before. At present we've got Project Managers rising up to £50,000 worth of business p.a. so why not you, as a Professional Salesman? sign up. Sell Honeywell, ICL and other manufacturers Turnkey products. Contact John Wood or Bob Tait for early interview.

MANAGERS — SALES SUPPORT

£12,500 plus car & bonus

Have you worked with software products?
Do you know your products technically?
Have you had experience in the following:
Sales Order Processing
Stock Control
Purchase Order Processing
Ledgers
Payroll
Vehicle Leasing?
Have you worked in the computing industry for at least seven years, in at least two different environments?
Have you used Honeywell or ICL equipment?
Do you want to work with a successful company?
Do you want to create further success?
Do you want to satisfy clients' business needs?
Do you want to be in control of your own rewards?
Do you want to work with clients and potential clients?
Do you want to be a company partner?
Do you want to be ahead of the opposition?
If you can answer YES to most of these questions, then we would like to meet you — SOON! Contact us — NOW. John Wood or Bob Tait.

ANALYST/PROGRAMMERS

£8,000 to £10,000

Have you had at least three years' programming experience?
Have you had COBOL experience?
Do you know about Sales Order Processing
Stock Control
Purchase Order Processing
Ledgers
Payroll
Vehicle Leasing?
Are you eager to develop new skills?
Do you want to broaden your horizons?
Do you want technical challenge?
Do you want contact with your clients?
Can you meet your own committed timescales?
Do you enjoy working in a professional environment?
Do you want the rewards that you think you deserve?
If you have answered YES to most of these questions, then we have got a lot to offer each other. Contact us, NOW. Bob Tait or Geoff Cairne.

MANAGERS IMPLEMENTATION

£12,000 upwards plus car

Have you had at least seven years' experience in the computing industry?
Have you had experience in the following:
Sales Order Processing
Stock Control
Purchase Order Processing
Ledgers
Payroll
Vehicle Leasing?
Have you used Honeywell or ICL equipment?
Have you had COBOL programming experience, system analysis, and design experience?
Have you worked with software products before?
Do you enjoy solving problems?
Do you think that ongoing support for a client is important?
Do you want to take an important role in satisfying current client needs, and in generating future business?
Do you want to lead others?
Do you want to receive the rewards that you think you deserve?
Do you want a company car?
Do you want a secure future?
If you have answered YES to most of these questions, we ought to be talking to each other. Contact us — NOW. Bob Tait or Geoff Cairne.

PROJECT LEADERS/MANAGERS

10K to 14K Car at Senior Level

We are seeking experienced Systems Designers/Investigators capable of undertaking an extensive number of feasibility studies in a pre-sales support role, through to Analysing and Designing Systems, right through to team control in a development role and Systems Implementation at client sites.

A considerable number of packages are already used so ability to rapidly understand the features and facilities of the varying systems ranging from Order Processing, through Stock Control into BOMP, Purchasing, Ledgers, etc. would be a distinct advantage. An understanding of Cobol is mandatory, as is some demonstrable career experience of having spent at least two years programming.

Ability to communicate professionally with users is very important. Equally so, the ability to project plan and to work within committed time scales. We in turn offer attractive working conditions, good salaries, excellent career progression opportunities, and the opportunities of share investment in our own Public Group.

All candidates must be resident or prepared to become resident within the Midlands, working from our Central Birmingham base at the Aston Science Park. Excellent positions. Excellent careers but with preference for the top 20% of the industry in capability, initiative and motivation. If you feel you have the ability, but would like the scope to develop, call Tradewinner, or visit us at the Which Computer? Show, January 17th-20th.

For interview at our Data Centre call Bob Tait or Geoff Cairne.

SALES MANAGER

TERMINAL PRODUCTS — UK COVERAGE — MIDLANDS BASED — ATTRACTIVE PACKAGE + COMMISSION

We seek an experienced Video Terminal Sales Executive capable of assisting in the development of a new venture as a Group subsidiary. We have an exciting product generating considerable interest, especially in the 132 character screen capability. We need a senior Sales Executive with a sound knowledge of protocols, able to assist and advise our American partner company, and able to assist with Datacube installations. We have a very large potential customer base to penetrate and enquire already for over 1,000 units as a target market with our ultimate UK market alone of over 5,000 units.

We have the product, with top company account interest already generated from over 40 sites with 6 test sites installed and working. A knowledge of Honeywell and ICL protocols could be advantageous but not essential. The ability to sell direct to interested clients, negotiate and tender to large accounts, and to build a small, top quality sales team, will be essential to gain this position. A serious later Directorship opportunity exists in a Public company subsidiary, and a chance of participation in equity with attractive low tax benefits exists for a top level Sales Manager with the experience and initiative to make a viable contribution. A company car, attractive salary and usual business expenses will be provided. We seek an early start to cross immediately available business opportunities. Some European travel will be involved, but very small. A Midlands home commitment is essential as an important Head Office Group member. An excellent opportunity for an experienced Terminal Systems Sales Manager to secure a top level reward and ground floor career opportunity. Telephone Bob Tait for discussion and interview data.

Please write enclosing details to: John Wood or Bob Tait

Sales Executives

WC1 & Thames Valley £10K base, £25K OTE + Car
Dealer and OEM Sales experience needed with Micro Business Systems or similar products. Emphasis is on knowledge of Dealership networks, including selection and appraisal, in the Midlands and South. Ref. 1901/E

Isobel Bruce or David Futcher 01-405 1006 or write quoting advertisement reference number, 16 Red Lion Square London WC1R 4QS

Recruitment consultants Licen. n. No. SE 8785

Finance Consultants/Project Leaders

Surrey Border/London £14-£18K
If you have sound experience of IBM, DEC or Tandem hardware gained within a banking and/or money market and commodity broking environment, this is an excellent opportunity to make that first move to a top consultancy, or a move to a better one. An out-going personality, coupled with a flexible attitude, is essential. Ref. 1901/F

Maths/Defence Systems

Central and West London £14K
Mathematicians are needed with skills in modelling, simulation, operational analysis or Artificial Intelligence. Defence Project leader experience or capability is required. Both our clients offer excellent career opportunities and relocation if appropriate. Ref. 1901/G

Analyst Programmers

London/Overseas Up to £12.5K
Systems house with world wide client base needs Hewlett Packard experts to work on bespoke versions of complex order processing software. Specification and implementation can be overseas — development in London. A minimum of 3 years experience, at least two on HP3000 is needed for these positions. Ref. 1901/H

Micro S/W Development

Herts £10K + Car
A vacancy exists for an Assembler programmer with a minimum of two years experience to join a software house developing microprocessor based POS products. Well-proven software design skills together with the ability to communicate at all levels is essential. Ref. 1901/J

Systems Designers (S'ware & H'ware)

London, Swindon & Maidenhead £12-£15K
We are looking for candidates with knowledge of Operating Systems including CP/M, MP/M, UNIX and relevant Assembler and high level languages plus LANs. Experience of market requirements, new product design, office technology and communications. Project Leader potential required. Ref. 1901/K

Computer Professionals

Communications/Electronic Warfare

Berks and Herts £11-£17K
Electronics and/or programming skills with, for some candidates, project leading experience, are needed for both civil and military systems work. Multi micro configurations are used for one system which involves Data Communications. Design of distributed databases and Carol programming background would also be relevant. Degree level candidates should be capable of technical innovation. Ref. 1901/L

Database Consultants

Central London £15-£20K
Two challenging posts in a consultancy are available for candidates who can demonstrate their ability to act as technical consultants to design projects. At least five years database specialisation spread over more than one host computer system is needed. Dynamic personality with good client skills is also a required attribute. Ref. 1901/M

Banking Systems

London/Herts Border c£17K
This systems house specialises in transaction processing technology and has designed and installed a number of sophisticated switched networks, mainly in the financial sector. They are seeking a high calibre professional with sound banking experience. Knowledge of Tandem equipment would be viewed with extreme interest but otherwise full training will be provided. Ref. 1901/N

IBM GSD

Analysts and Programmers London/Berks/Surrey £10K upwards
RPG programming skills are required for several vacancies in the locations indicated above. Analysis experience is needed for some posts and at senior levels knowledge of MAAPICS or COPICS could lead to consultancy level appointments for candidates who have led projects and who possess the necessary personal qualities. Ref. 1901

(7342)

Communications Technologists

Central London or Harlow (Essex)

British Petroleum's Telecommunications Division is responsible for the implementation and operation of national and international communications systems and networks incorporating data, voice, image and message technologies. Our London and Harlow computing centres are looking for communications technologists to implement and support a complex, state-of-the-art, packet switching network as well as more conventional communications.

Applicants, preferably in their twenties, must have either an HNC/HND in telecommunications or City and Guilds full technical qualifications or the equivalent, together with 4-6 years' telecommunications experience.

We offer a competitive salary supported by a substantial range of benefits including non-contributory pension scheme, subsidised luncheon club and first-class sporting/leisure facilities.

Please write or telephone for an application form to:

Team Leaders • Senior Engineers • Electronics Engineers & Real-Time Software Specialists

Our investment in communications will...

Make 1984 the year you joined one of our small teams of multi-disciplined Engineers at New Southgate. There you'll be working in a stimulating environment alongside highly skilled professionals with a mission to take up the challenge of tomorrow's communications systems and expand our business in the highly competitive UK and overseas markets.

We are currently involved in several of the most interesting telecommunications projects of the future which must inevitably evolve into fully integrated information delivery systems optimised for both voice and data. Among

these STC's new digital telephone switching system, already of proven international performance, is now undergoing extensive UK software design, development and adaptive engineering.

While the course of the Information Revolution can be defined in broad contours, it cannot be predicted in detail. Whatever predictions are made today are bound to be overtaken by accelerating technology and shifting demand. What is predictable however, is the need for a number of key men and women to join us in a variety of functions:

...take your career into the 21st century now...

SALES MANAGERS AND SALESMEN — UP TO £50,000 EARNINGS CAPABILITY

We are inundated with top quality leads and serious business opportunities. As such, we urgently seek a number of experienced Business Systems salesmen, with a proven, demonstrable track record of closing business, to join our rapidly expanding company as a Public company subsidiary.

Tradewinner offer a wide variety of Package and Custom built software running under Honeywell and ICL equipment. Negotiations are also in progress with a number of leading micro manufacturers. We seek candidates with the ability to produce demonstrable, undertake initial feasibility studies, prepare a high quality tender, supported by a first class Systems Design team, and present an effective business case at Board level.

Excellent graphic aids are available. Equally, a first class reference base is already established throughout the entire UK. We are flooded with sales enquiries and actively market to provide top business opportunities for our companies. Outstanding opportunities exist for all categories of proven sales staff with early Board prospects for senior top performers. Equally, for developing salesmen, with the professional and commitment, opportunities to triple your earnings are uniquely available via Tradewinner. Either apply immediately for Birmingham interview, or visit us on the stand at the Which Computer? Show. If you've got the ability, we've got the quality of leads you've never seen before. At present we've got Project Managers sitting up c. £250,000 worth of business p.a. so what could you, as a 'Professional Salesman', sign up. Sell Honeywell, ICL and other manufacturers Turnkey products. Contact John Wood or Bob Tait for early interview.

MANAGERS — SALES SUPPORT £12,500 plus car & bonus

Have you worked with software products?
Do you know your products technically?
Have you had experience in the following:
Sales Order Processing
Stock Control
Purchase Order Processing
Ledgers
Payroll
Vehicle Leasing?

Have you worked in the computer industry for at least seven years, in at least two different environments?
Have you used Honeywell or ICL equipment?
Do you want to work with a successful company?
Do you want to create further success?
Do you want to satisfy clients' business needs?
Do you want to lead others?
Do you want to work with clients and potential clients?
Do you want to be in control of your own rewards?
Do you want a company car?
Do you want to be ahead of the opposition?

If you can answer YES to most of these questions, then we would like to meet you — SOON! Contact us — NOW, John Wood or Bob Tait.

ANALYST/PROGRAMMERS £6,000 to £10,000

Have you had at least three years' programming experience?
Have you had COBOL experience?
Do you know about Sales Order Processing
Stock Control
Purchase Order Processing Ledgers?
Have you used Honeywell or ICL equipment?
Are you eager to develop new skills?
Do you want to broaden your horizons?
Do you want technical challenges?
Do you want contact with your clients?
Can you meet your own committed timescales?
Do you enjoy working in a professional environment?
Do you want the rewards that you think you deserve?

If you have answered YES to most of these questions, then we have got a lot to offer each other. Contact us, NOW, Bob Tait or Geoff Forrester.

MANAGERS IMPLEMENTATION £12,000 upwards plus car

Have you had at least seven years' experience in the computing industry?
Have you had experience in the following:
Sales Order Processing
Stock Control
Purchase Order Processing
Ledgers
Payroll
Vehicle Leasing?
Have you used Honeywell or ICL equipment?
Have you had COBOL programming experience, system analysis, and design experience?
Have you worked with software products before?
Do you enjoy solving problems?
Do you enjoy working with clients?
Do you think that computer systems are tools to be used to satisfy business needs?

Do you want to do feasibility studies for clients?
Do you think that ongoing support for a client is important?
Do you want to take an important role in satisfying current client needs, and in generating future business?
Do you want to lead others?
Do you want to receive the rewards that you think you deserve?
Do you want a company car?
Do you want a secure future?

If you have answered YES to most of these questions, we ought to be talking to each other. Contact us — NOW, John Wood or Geoff Forrester.

PROJECT LEADERS/MANAGERS 10K to 14K Car at Senior Level

We are seeking experienced Systems Designers/Investigators capable of undertaking an extensive number of feasibility studies in a pro-sales support role, through to Analysing and Designing Systems, right through to team control in a development role and Systems implementation at client sites.

A considerable number of packages are already used so ability to rapidly understand the features and facilities of the varying systems ranging from Order Processing, through Stock Control into BOM, Purchasing, Ledgers, etc. would be a distinct advantage. An understanding of Cobol is mandatory, as is some demonstrable career experience of having spent at least two years programming.

Ability to communicate professionally with users is very important. Equally so, the ability to project plan and to work within committed time scales. We in turn offer attractive working conditions, good salaries, excellent career progression opportunities, and the opportunities of share investment in our own Public Group.

All candidates must be resident or prepared to become resident within the Midlands, working from our Central Birmingham base at the Aston Science Park. Excellent positions. Excellent careers but with preference for the top 20% of the industry is capability, initiative and motivation. If you feel you have the ability, but would like the scope to develop, call Tradewinner, or visit us at the Which Computer? Show, January 17th-20th.

For interview at our Data Centre call Bob Tait or Geoff Forrester.

SALES MANAGER TERMINAL PRODUCTS — UK COVERAGE — MIDLANDS BASED ATTRACTIVE PACKAGE + COMMISSION

We seek an experienced Video Terminal Sales Executive capable of assisting in the development of a new venture as a Group subsidiary. We have an exciting product generating considerable interest, especially in the 12 character screen capability. We need a senior Sales Executive with a sound knowledge of protocols, able to assist and advise our American partner company, and able to assist with Datacube interpretations. We have a very large potential customer base to penetrate and enquiries already for over 10,000 units as a target market with our ultimate UK market alone of over 5,000 units.

We have the product, with top company account interest already generated from over 40 sites with 5 test sites installed and working. A knowledge of Honeywell and ICL protocols could be advantageous but not essential. The ability to sell direct to interested clients, negotiate and tender to large accounts, and to build a small, top quality sales team, will be essential to gain this position. A serious later Directorship opportunity exists in a Public company subsidiary, and a chance of participation in equity with attractive low tax benefits exists for a top level Sales Manager with the experience and initiative to make a viable contribution. A company car, attractive salary and usual business expenses will be provided. We seek an early start to close immediately available business opportunities. Some European travel will be involved, but very small. A Midlands home commitment is essential as an important Head Office Group member. An excellent opportunity for an experienced Terminal Systems Sales Manager to accrue a top level reward and ground floor career opportunity.

Telephone Bob Tait for discussion and interview data.

Please write enclosing details to: John Wood or Bob Tait.

Ambitious Analyst/Programmers with a degree and three years' experience of defence, information or industrial real-time applications would be of great interest. Familiarity with Assembler or real-time/mathematical languages is desirable. Ref. 1901/B

Product Support Specialists for Micro Systems

Thames Valley & WC1 £12K+
New Products coming from Established Companies seeking experience of IBM PC or Sirius type systems to support their growing Dealer and large OEM customer base. New positions in expanding organisations with great potential for ambitious applicants. Ref. 1901/C

Electronics Engineers

Surrey Up to £13.5K
Vacancies exist for candidates with a qualification in electronics and at least two years' software development experience to work on complex defence systems. Microprocessor and CORAL or PASCAL experience advantageous. Excellent benefits and relocation offered. Ref. 1901/D

Sales Executives

WC1 & Thames Valley
£10K base, £25K OTE + Car
Dealer and OEM Sales experience needed with Micro Business Systems or similar products. Emphasis is on knowledge of Dealership networks, including selection and appraisal, in the Midlands and South. Ref. 1901/E

Isobel Bruce or David Futcher 01-405 1006 or write quoting advertisement reference number, 16 Red Lion Square London WC1R 4QS

Finance Consultants/Project Leaders

Surrey Border/London £14-£18K
If you have sound experience of IBM, DEC or Tandem hardware gained within a banking and/or money market and commodity broking environment, this is an excellent opportunity to make that first move to a top consultancy, or a move to a better one. An out-going personality, coupled with a flexible attitude, is essential. Ref. 1901/F

Maths/Defence Systems

Central and West London £14K
Mathematicians are needed with skills in modelling, simulation, operational analysis or Artificial Intelligence. Defence Project leader experience or capability is required. Both our clients offer excellent career opportunities and relocation if appropriate. Ref. 1901/G

Analyst Programmers

London/Overseas Up to £12.5K
Systems house with world wide client base needs Hewlett Packard experts to work on bespoke versions of complex order processing software. Specification and implementation can be overseas — development in London. A minimum of 3 years experience, at least two on HP3000 is needed for these positions. Ref. 1901/H

Micro S/W Development

Herts £10K + Car
A vacancy exists for an Assembler programmer with a minimum of two years experience to join a software house developing microprocessor based POS products. Well-proven software design skills together with the ability to communicate at all levels is essential. Ref. 1901/J

Systems Designers (S'ware & H'ware)

London, Swindon & Maidenhead £12-£15K
We are looking for candidates with knowledge of Operating Systems including CP/M, MP/M, UNIX and relevant Assembler and high level languages plus LANs. Experience of market requirements, new product design, office technology and communications. Project Leader potential required. Ref. 1901/K

Computer Professionals

Communications/Electronic Warfare

Berks and Herts £11-£17K
Electronics and/or programming skills with, for some candidates, project leading experience, are needed for both civil and military systems work. Multi micro configurations are used for one system which involves Data Communications. Design of distributed databases and Coral programming background would also be relevant. Degree level candidates should be capable of technical innovation. Ref. 1901/L

Database Consultants

Central London £15-£20K
Two challenging posts in a consultancy are available for candidates who can demonstrate their ability to act as technical consultants to design projects. At least five years database specialisation spread over more than one host computer system is needed. Dynamic personality with good client skills is also a required attribute. Ref. 1901/M

Banking Systems

London/Herts Border c£17K
This systems house specialises in transaction processing technology and has designed and installed a number of sophisticated switched networks, mainly in the financial sector. They are seeking a high calibre professional with sound banking experience. Knowledge of Tandem equipment would be viewed with extreme interest but otherwise full training will be provided. Ref. 1901/N

IBM GSD

Analysts and Programmers
London/Berks/Surrey £10K upwards
RPG programming skills are required for several vacancies in the locations indicated above. Analysis experience is needed for some posts and at senior levels knowledge of MAA/PICS or COPICS could lead to consultancy level appointments for candidates who have led projects and who possess the necessary personal qualities. Ref. 1901

Recruitment Consultants Licence No. SE 6705

Communications Technologists

Central London or Harlow (Essex)

British Petroleum's Telecommunications Division is responsible for the implementation and operation of national and international communications systems and networks incorporating data, voice, image and message technologies. Our London and Harlow computing centres are looking for communications technologists to implement and support a complex, state-of-the-art, packet switching network as well as more conventional communications.

Applicants, preferably in their twenties, must have either an HNC/HND in telecommunications or City and Guilds full technical qualifications or the equivalent, together with 4-6 years' telecommunications experience.

We offer a competitive salary supported by a substantial range of benefits including non-contributory pension scheme, subsidised luncheon club and first-class sporting/leisure facilities.

Please write or telephone for an application form to:

Mrs J. E. S. Wilkerson,
Recruitment and Placement Branch,
The British Petroleum Company plc,
Britannic House, Moor Lane, London EC2Y 9BU.

The IBM SYSTEM/34/36/38 Recruitment Specialists

SNR

ANALYST PROGRAMMER/DPM

for a new

IBM SYS/36 site in Cambridge

c£14,000 + benefits

+ very generous relocation expenses where appropriate

MY CLIENT: Is an International Company providing a range of services to the petroleum industry to aid in the drilling, completion and production of oil-wells. Part of a multi-national organisation, their expertise is used in over 75 countries to locate and produce oil on and off-shore. A Research centre is now being established in Cambridge including a new IBM SYS/36 installation.

THE VACANCY: Needs the talents of a multi-disciplined professional who would like to use their ability in developing financial and accounting systems. The successful applicant will be responsible for the day to day running of the installation within a high level research team environment. The position requires total dedication, versatility and is an exceptional opportunity to the career professional.

THE PROSPECTS: Within the group both short term and long term are excellent with very good promotional prospects. Every chance will be given to develop your technical skills enabling you to advance your career.

TO APPLY: Please call Richard Milsum on 01-354 1055 during office hours or on 01-958 2553 during evenings and weekends. Response will be treated with strict confidence.

**MARCH

RECRUITMENT LTD**

1 NOEL ROAD, LONDON N1 8HQ

01-354 1055

The British Petroleum Company p.l.c.

SYSTEMS ANALYSTS C. LONDON

To £13,000

This well known company is undergoing considerable expansion of its DP department and requires Analysts at various levels of experience. A minimum of one year's formal analysis gained in a commercial environment is required. Preference will be given to those with accounting application backgrounds. There will be a good deal of contact with management departments and candidates must therefore be professional in both appearance and attitude.

SYSTEMS MANAGERS H'WELL L6 + BCL

c.£11,000

Two clients seek good Analyst/Programmers who wish to move into managerial positions. Firstly a company based in N. London is shortly to install a BCL MOLECULAR 18 and requires a person with experience of ASSEMBLER or similar language. Secondly, a company based in Bucks. with a HONEYWELL L6 seeks a person with COBOL or SCREENWRITE experience. Applicants should be able to work on their own initiative and preferably have some client/user contact experience.

PROGRAMMERS MINI COMPUTERS

c.£8,500

A number of clients currently require Programmers with a minimum of a year's experience in COBOL, FORTRAN or PASCAL. This will have been gained on any mini however special interest will be shown in those with knowledge of DEC VAX, PRIME, HP 1000 or GOULD SEL. Applicants should have a good educational background and be smart and ambitious. Most work will be in C. London with the occasional visit to client sites.

DEVELOPMENT DEC/COBOL

To £16,000

Continuing growth opens further S&P opportunities with this nationally renowned Middlesbrough based company. Utilising VAX and PDP equipment for their advanced on-line systems development they require Programmers or Analysts/Progs. with two to three years' COBOL preferably gained in a VAX environment. At Team Leader level they seek a Senior Analyst with proven project design through implementation experience and good DEC systems exposure. A comprehensive benefits package is offered, to include bonus, relocation and with many positions a company car.

ALL LEVELS ICL/VME

To £18,000

An expanding Essex based company, committed to major financial systems development on ICL 2900 VME systems is seeking experienced ICL people at all levels. Progs. and Analysts/Progs. should have 18 months or more COBOL, the latter with some formal analysis. Analysts and above will have at least two years' systems exposure. Excellent salaries and prospects are augmented by a generous benefits package which includes a good bonus scheme.

PROJECT MANAGERS COMMS/BANKING

To £18,000

Two City-based clients with heavy international commitments require Project Managers in the Banking and Communication areas. They seek in depth experience in either application area with micro experience especially relevant for the Comms. position. Basic salaries will be greatly enhanced by valuable and extensive benefits packages.

ANALYST/PROGRAMMERS DATABASES

£10,000

A rapidly expanding software house is currently recruiting Analyst/Programmers with a minimum of 18 months DATABASES from a Prime or CMC environment. The client actively encourages employees to service customers in a consultancy role therefore applicants should be presentable, confident and have the ability to deal with first time users. The client can offer job satisfaction, regular salary reviews and intensive training.

ANALYST/PROGRAMMER RPGII/III

£10,500

An international bank has identified a requirement for an Analyst/Programmer with a solid GSD background. The bank is an established 38 user but is quite prepared to consider two years' RPGII programming and will retrain to RPGIII. The department is fairly small and everyone is encouraged to have as much user contact as possible. As well as a good starting salary the client will offer a banking package to include a 5% mortgage.

PROGRAMMERS PL1

To £11,500

A company offering a range of financial services has several requirements for PL1 programmers. The minimum requirement is for 18 months PL1 in a commercial environment for the programming positions and up to four years' plus for the senior posts. Applicants should have good all round programming skills to include design, coding and implementation. Due to the size of the client there is a recognised career path which would lead through to systems if desired.

Communications Consultants

£16,000-£23,000

Berks/Middx

plus car

Plus Relocation

Our client is a growing and very exclusive consultancy specialising in advanced telecommunications and electronic office systems. Their assignments are in both public and private sectors and include the top organisations in finance, oil, electronics, manufacturing, public utilities and Government.

They provide a totally comprehensive service on the full range of Information Technology from strategic studies to installation and their policy of employing only the very best specialists as consultants has secured them a highly prestigious reputation within the industry and amongst their clients.

Headed by one of its best known professionals in computing, the company is securely established financially with a five year development plan which is backed by significant funding and resources, enabling them to pursue their policy of excellence and innovation which has already established them as a leading communications consultancy.

They now seek a small number of top level communications professionals with practical expertise at both technical and project management levels with particular emphasis on PABX systems.

There is an unusual opportunity for the more experienced and senior consultant to develop a business sector which could soon lead to the running of an autonomous subsidiary company within the group.

The company encourages individual responsibility at all levels and the informal structure allows all consultants access to Directors at any time.

Applicants will work in London or the Home Counties with opportunities to participate in European assignments, and must have a strong background in the evaluation and installation of PABX systems.

For further information please telephone BOB MILLAR on 02403-28866 or 01-567 5501 for our 24 hour unsophisticated service.

TRAINERS to £14,000 + OVERSEAS TRAVEL

As part of their expansion programme Langton require individuals with experience of training in publishing or software products preferably within an IBM or DEC environment. Reporting to the Training Manager you will be responsible for training customers in a variety of software products. The positions will require travel in Europe and potentially North America therefore foreign languages will be advantageous.

TECHNICAL SUPPORT ANALYST to £14,000 + OVERSEAS TRAVEL

Duties include installation and support of electronic publishing software products as well as trouble shooting on customer sites. There will be some travel in Europe and potentially North America. It is envisaged that opportunities will be created for the right person to eventually move into systems programming. Eighteen months development or support experience in an IBM VM or DEC VAX environment is essential.

TECHNICAL SUPPORT PROGRAMMER to £14,000

Responsibilities cover enhancing and maintaining software products including converting software to run on different computers and building a software tools environment for text and graphics processing. You should have two years experience in development or maintenance with a liking for thoroughness and the solving of complex problems. An understanding of IBM VM or DEC VAX Fortran is essential.

CUSTOMER SUPPORT ANALYST to £12,000

These are key positions reporting to the Product Support Manager. Responsibilities include supporting customers using electronic publishing software, pre sales and post sales support, manning of a hot line enquiry service, and setting up and running of demonstrations. Ideally you will have 2 years plus software development or support experience with a knowledge of either IBM or DEC. An understanding of the Xerox 9700 Laser printer or facsimile systems would be an advantage.

For an informal discussion regarding these opportunities please telephone Miles Richards on 01-938 1804 (24 hours) or 01-847 2385 (7pm-9pm).

Systems Consultants

London: Salaries to £20k

Having just won a series of major contracts, the Consultancy Division of a large systems and Software House has a number of vacancies for Senior Systems Consultants who will be expected to spearhead their growth during the next few years. All applicants are required to possess at least one degree and have a minimum of five years' computing experience, preferably gained in a large user or systems house environment. Awareness of

development in the fields of office automation and the telecommunications industry is of special interest to our clients, as is a willingness to be involved with marketing activities, including the development of new business. These challenging roles will appeal to ambitious, aggressive individuals who wish to remain at the forefront of technical developments. Ref: L/D/A

PASCAL & UNIX

S.W. London: Salaries to £13k

A highly respected supplier of UNIX-based Microcomputer systems and Accounting Packages wishes to recruit a number of exceptional Applications Programmers and Systems Designers. Applicants, aged 24-32 years must have a minimum of four years' relevant practical experience in a UNIX, CPM or financial accounting environment. Your programming background should include fluency in two or more of PASCAL, C, Level II COBOL or Business BASIC. Those candidates fully familiar with UNIX accounting practice and also having a current background in systems design/analysis are especially encouraged to apply. Certain positions will entail a significant degree of client contact in the form of product demonstration seminars and on-site client training, consequently our clients value well-developed interpersonal skills. Ref: L/D/B

FORTAN Programmers

London: Salaries to £12k

A leading international Systems Company specialising in the development and sale of communications software is seeking Programmers and Designers for its Central London headquarters. Suitable candidates should hold a numerate degree and have two years' subsequent programming or systems design involvement. Fluency in FORTRAN is essential and it is preferable to have had exposure to either a PDP 11/RX-11M or VAX/VMS configuration. Candidates who are fluent in a foreign language especially French or German will be of particular interest to our client. A degree of mobility is necessary since most positions involve both European and Transatlantic travel. Ref: L/D/C

CAD/CAM Sales Support

East Midlands: Salaries to £14k

Our clients have recently negotiated an exclusive distribution agreement with a leading U.S. supplier of 12 bit based CAD/CAM systems. The company has an immediate requirement for CAD/CAM Sales Support Personnel primarily to be based in its East Midlands headquarters although a number of positions will shortly be available in London. You must be a highly competent FORTRAN Programmer with a background in manufacturing industry. Of particular interest will be those who have post-graduate or U.S. software experience. Since you will be expected to offer in-depth technical support to new users, good interpersonal communication skills and mobility are essential. On appointment, all employees will receive extensive product training and thereafter on a site-monthly basis. Ref: L/D/D

Comms S/W Development

Sussex Coast: Salaries to £15k

Our client, a major supplier of communications systems, with a well-deserved reputation for innovation, are recruiting a large number of Communications Software Specialists for their development facility, based in the South Downs. They are especially interested in applicants with programming skills in any block structured or assembly language, particularly if they have developed programs to run on a UNIX-based system. Their current areas of activity include office automation, military command and control and cellular radio systems. Whilst they would be particularly interested in applications from those with experience in any of the above areas, general real-time experience is also very much of interest. Ref: L/D/E

Real-Time Designers

Herts/Beds: Salaries to £14k

The systems group of a leading computer manufacturer has a number of vacancies for Real-Time Programmers and Designers. All applicants should be educated to BSc standard and have at least 18 months' experience within a real-time scientific minicomputer or local/wide area network. They will be required to develop and test programs in languages should include fluency in

Assembler and one or more of PASCAL, C, BCPL or CORAL 68. Successful candidates will join project teams involved in the design and development of communications products. Consequently, if you are familiar with X25 protocol techniques, ISO standards or local/wide area networks, then you will be of particular interest to our client. Ref: L/D/F

Industrial Automation

Central London: Salaries to £16k

The Industrial Division of a leading Systems and Software House has recently won a number of major contracts and is therefore seeking additional Programmers and Consultants. Ideally, applicants should be graduates who have at least 12 months' programming experience in a real-time minicomputer environment using PASCAL, FORTRAN or COBOL. Knowledge of DEC VAX or HP1100 would be an advantage, but is not

essential, since our client will provide in-house training. For the more senior positions, you will be expected to have significant experience in software systems design and project leading in the areas of plant control (warehousing, materials handling, process control), distributed control (wide area networks, automated retailing systems, etc.) or software technology (Comms eg X25 and ISO standards). Ref: L/D/G

Simulation Systems

Thames Valley: Salaries to £13k

A long established Engineering Systems Supplier based in the Thames Valley has an immediate requirement for additional FORTRAN Programmers and Simulation Engineers. You should hold at least one numerate degree and be aged 23-30 years. Whilst the Company's software products are machine portable there is some preference for candidates who have programmed in a PDP/VAX.

Prime, HP or GEC environment. Of greater importance are those who have very recent or current software design and applications programming experience with one or more of: guided weapons and missile control systems, LSI and hybrid circuit design, simulation and modelling of ballistic dynamic systems. Ref: L/D/H

TECHNICAL

LOGSYS

COMMERCIAL

LOGSYS Advanced Systems provides systems design, programming, and project implementation services to the industrial and scientific and defence community. Most projects are real-time mini or micro computer systems with a relatively large or complex software content. Our services are provided by high calibre software staff, about half of whom work on site at client's premises, whilst the others are based at our research and development centre which is shortly moving into new premises in Wokingham.

As a result of the high demand for our services we now need the following additional staff:-

VAX SYSTEMS PROGRAMMERS (2) to £14,000

1 position in Portsmouth, 1 in Farnborough, Hants. VMS, FORTRAN, CORAL and MACRO essential. Database experience and RSX an advantage.

PROGRAMMERS/SOFTWARE ENGINEERS (6) to £13,000

Portsmouth. Design and development of state-of-the-art real-time Defence systems. CORAL essential, MASCOT desirable.

COMMUNICATIONS SPECIALIST (1) to £14,000

Wokingham. TELETEN, X25, Local Area Network, PASCAL, 16-bit micro and Assembler experience desirable.

The company is continually in the forefront of advanced technology and development, and flexibility and the ability to respond to rapidly changing technology is an important factor in the success of this prestigious operation. Our projects have included interactive graphics, display systems, navigational trainers, simulation and modelling, process control and automation, expert systems, command and control systems and system software.

To apply for one of these positions or to obtain more information, either telephone, write or send your resumé to Clive Williamson, LOGSYS, 72 Kingsley Road, Northampton NN2 7BL. Telephone 0604 711209. 9 a.m. to 9 p.m. any day including week-ends.

(7100)

LOGSYS Business Systems, an associate company to Logsys Advanced Systems, produces specialist applications programs and packages for commercial users, particularly Insurance and Reinsurance Brokers, and Advertising Agencies. Early in 1984 we shall be moving to brand new offices in Wokingham, which will also house our VAX, PDP11 and WANG computers. We have other offices in London and New York.

As a direct result of the popularity of our business systems we now urgently require the following additional staff:-

ANALYST/PROGRAMMERS (2) to £12,000

Wokingham based, probably 2 days in London per week. A minimum of 2 years experience in insurance, reinsurance, commercial or financial systems. Previous Hardware is largely irrelevant.

PROGRAMMERS (3) to £10,000

Wokingham. 2 years commercial experience using either COBOL, BASIC PLUS or BASIC PLUS TWO essential.

Our staff are expected to produce robust and effective systems, on time and to pre-defined standards. Senior staff are required to travel to client sites as necessary, and therefore must be of smart appearance.

If you enjoy working in a challenging, changing and growing organisation, where management are responsive, and where you can influence decisions and grow with the Company, then you will enjoy LOGSYS. Working conditions are excellent and there are regular salary reviews and useful fringe benefits.

Exciting Career Prospects

Because of their continued expansion programmes, our clients have URGENT requirements for the following KEY personnel.

We have many other exciting opportunities for computer staff particularly Programmers and Analysts, and would be very pleased to hear from you if you are considering a career move.

Your first step to pursue these exciting career opportunities, is to telephone ANTHONY HALL, Computer Search & Selection, Hamilton House, Marlowes, Hemel Hempstead, Herts HP1 1BB. Tel: Hemel Hempstead (0442) 40761.

Technical Support Analyst c.£10,000 + Bonus + car + BUPA

Based in the Bucks area and covering the Southern and Eastern Home Counties it is imperative that the person appointed has PICK experience.

Business Analyst c.£13,000

Based in Middlesex, the person appointed will analyse financial systems, so it is imperative that he/she has a sound financial background. The current project involves the total update of their European General Ledger and on-line receivables.

Programmers c.£8-£12,000

Based near Redditch, our client is seeking a number of programmers with relevant VAX/COBOL experience with FMS/VMS/TDMS.

Analyst/Programmers c.£12-£12,500

Based in Middlesex the successful applicants will have strong COBOL experience, preferably on IBM. If IBM background, then you must have DOS/VSE and ICCF.

Systems Software Specialists £Negotiable 1 North of England 1 South of England

Our client is seeking very high calibre specialists with relevant MVS/OS experience. Salaries will reflect the importance of these KEY positions.

Programmers c.£8-£13,500

To join a major multi-national company involved in office automation. Applicants must have at least 2 years' IBM experience with CICS and PLI.

Computer Search & Selection

PLAN YOUR CAREER WITH PRESCOT

England
Australia
New Zealand
South Africa
Zimbabwe

Careful planning often makes the difference between the successful and the not so successful computer career. Prescott Computers understand this because we specialise in overseas computer recruitment, and the selection for an overseas post requires extra care by Prescott, employer and employee. We use the same principles of care whether UK only or overseas employment is involved.

We wish to interview: Programmers, Systems Analysts, Analyst/Programmers, Consultants and Sales People for a broad range of clients in England and overseas. Salaries range from:

£8,000 to £25,000 p.a.

If you are interested, why not telephone us on 01-836 8885/6 for an informal discussion. Alternatively if you prefer write to:

Prescot Computers Ltd

11/13 Broad Court, Covent Garden, London WC2 5QN

(7228)

Telecommunications Engineer

c£8,500

Bristol area

Our Client, a major subsidiary of a multi-national Group, is in the process of developing a nationwide interactive network of Hewlett Packard 3000 minis, using CASE DCX equipment.

This has created a requirement for an additional person who, reporting to the Telecommunications Co-ordinator, will assist in the planning, installation and day to day running of the Company's telecommunications facilities.

Our Client is seeking an ambitious Telecommunications Engineer with at least six months practical involvement in data communications, and the ability to isolate problems, either personally, or by calling in the relevant engineering support.

This newly created, career position will suit someone with a practical bias and the ability to generate positive relationships with users.

This is an excellent opportunity for a young and ambitious person who enjoys variety, challenge and travel and is keen to take advantage of the excellent career prospects available within this growing and highly profitable Organisation.

A current driving licence is essential, as a company car will be available for travel to remote sites.

Starting salary is negotiable in the region of £8,500.

If you possess the necessary level of experience and are looking for an interesting future, contact Ian Payne on 021-236 3781 for further information and application form. Alternatively, send him a brief Resume of your career to date at the Birmingham office address which is shown below.

SENIOR SYSTEMS OPPORTUNITIES

Our Client, Universal (CMS) Ltd., is a small but well-established Software House with teams specialising in the clothing and textile industry and wine and spirits industry. Due to increased demand for their services they now require additional senior DP professionals to join them at both their Windsor and Leicester based offices.

SYSTEMS SUPPORT ANALYST c.£13,000 + CAR

The essential quality for this position is the ability to support existing installations and new sites in both a formal training role and informal support role. Applicants should have experience of presenting training programmes and providing a high level of documentation for courses and customer support. Any exposure to Burroughs small system would be of benefit.

SYSTEMS ANALYSTS to £15,000 + CAR

Candidates should have a sound DP background with experience of designing commercial real time systems on mini or microcomputers. They must also have seen at least one project through from feasibility study to full systems implementation. As there will be a good deal of customer contact and support, applicants must be professional in both appearance and attitude.

The Company has now reached a crucial stage with its planned expansion and is dedicated to recruit the right individuals to join their young and dynamic teams. If you can meet the above requirements and would enjoy working in a challenging and rewarding environment, contact Mike Harmer at Apex 01-404 4821 or Terry Forsey at Universal (CMS) Ltd. Windsor (07535) 54587 for further details.

Plenty of work for experienced staff

Contract agencies are enjoying record business, says Keith Holder

BUSINESS is booming. That is the message from contract staff agencies many of which are reporting their highest levels of business. This in turn is leading to increased opportunities for operators, programmers and analysts to cash in on a lucrative part of the market.

The demand is for experienced personnel. Just how expert depends on the area served by the agency, but three years' work on one of the major manufacturer's machines - IBM being a clear preference - and online database experience is a typical requirement.

Most of the larger agencies have their own vetting procedures to screen potentials, checking technical knowledge and references.

This quest to provide top quality staff has its problems. Mike

the travelling and looked for permanent positions.

Most agencies expressed a desire to build up a team which would carry on for many years.

Some contracts can last for up to two years, requiring temporary relocation, but most are still between six weeks and three months.

Travel, while necessary, need not be widespread as the demand for contract staff falls into well defined regions, London being the main one, and it is possible to find agencies which serve a particular geographical location.

Though the market continues to grow at a greater rate than that for permanent staff, the type of staff required is changing, along with the type of company now using contract employees.

Chris Jordan, recruitment co-ordinator for Data Power Computer contracts, said this could be linked with the recession, and the emergence of smaller systems.

This deficit of staff has arisen because companies either scaled down their DP departments or

held off investment in new equipment, and this is beginning to show, said Jordan.

There has also been a marked change in the type of systems being installed, with a massive increase in the use of microcomputers, particularly in small companies.

Minicomputers are also now a significant portion of business systems said Marilyn Davidson, a director of CPI, with the Vax the

dominated by IBM, there was a significant increase in the need for staff with experience of other manufacturers' equipment, notably ICL, Honeywell and Univac.

Top of the league in requirements for software and operating systems skills are Cobol and CICS, with HP3000, ICL VME, DM-1 and RPG just behind.

The contract market is still tied to the cities and the demand for staff with financial, accounting and commercial backgrounds is prevalent.

London and the south-east is still the richest hunting ground, though the Midlands and south-west are also fairly safe bets for the job hunter.

According to some contract agencies, once out of the London area there is greater opportunity for those with engineering and manufacturing backgrounds. This is particularly true in Scotland, said Carol Sutherland, of Hill Britton and Associates, who cited the electronics industry, including Ministry of Defence contractors, as sources of employment.

The potential for contract employment does not stop at the British coastline either. Octopus International and CDS-IBM both reported a healthy list of customers in Europe. Requirements for specific experience seem much the same, though there are languages to cope with.

Whiting said that, though still

all provide a steady requirement for contract work. Work comes mainly from banks, and financial institutions and UK companies with European offices.

Contract staff can expect to be paid about twice the going rate for permanent staff, though it can rise to three times for jobs in Scotland and remote areas. Set against this is the fact that the contract worker will have to organise his own National Insurance, pension contribution and tax

Contract staff can expect to be paid about twice the going rate for permanent staff. Set against this is the fact that the contract worker will have to organise his own National Insurance, pension contribution and tax

Contract staff can expect to be paid about twice the going rate for permanent staff. Set against this is the fact that the contract worker will have to organise his own National Insurance, pension contribution and tax

Whiting said a good worker should not find it too difficult to stay in work.

While the contract agencies represent the most accepted source for staff, it is possible to go it alone, especially for small systems.

This can, of course, be a hazardous business as the degree of protection offered by the agencies is absent. They warn of potential exploitation and advise anyone considering this course to make sure they get a formal contract - and even then check it with a microscope.

Our Client

Our Client is a large oil transportation corporation based in downtown Los Angeles, responsible for a complex distribution system covering the West Coast of America. They are currently in the process of upgrading from B2900 to B4900 using MCP/ GEMCQS and DMSII. Their expansion has created a variety of career openings for ambitious D.P. professionals in an exciting, new environment.

The Vacancies

Database Analysts will be responsible for design and implementation of new logical and physical databases, including planning, standards, security and development.
Systems Support Programmers will maintain all systems software including the MCP operating system and data communications software, and provide technical support.
Technical Support Analysts will assist users of distributed processing systems

on a technical basis, and will be responsible for purchase, installation and user training in all phases of systems acquisition.
Analyst Programmers will develop new applications systems of a commercial nature, and enhance various financial systems currently in use or under development.

Our Package

provides: full family airfares, relocation allowance, medical insurance, sick pay, **arranges:** banking facilities, accommodation, car transport, assistance in settling in. And our local office in Los Angeles is minutes away from our Client's site, providing you with on-the-spot support and advice.

Act now!

If you can tick four out of five you should be on the phone **now**.

PUBLIC SECTOR APPOINTMENTS

There are few projects in computing that can match the variety provided by Birmingham City Council. We have the equipment to meet the challenge with an IBM 3033/3081 and over 400 terminals.

Birmingham City Council, the largest city authority in England, serves a population of over 1 million with a diverse commercial and industrial Community. The City Treasurer's Department has responsibility for nearly £1000m p.a. on capital and revenue account and playing a vital role in the Department's activities is the purpose built Computer Centre, which is located close to the City Centre. The Centre operates an IBM 3033 with 13,000 megabytes of backing store to support over 400 terminals with a further 200 planned.

An IBM 3081, with an increase in backing store to give a total of 30,000 megabytes is being installed to cater for the development of new applications.

As a result of this substantial increase in complexity, the Technical Support Group now requires experienced Computer Professionals to work in the areas of Operating Systems, Communications Network and Operational Service Support. The software in use includes MVS/SP, JES2, IMS, ACF/VTAM/NCP, TSO/SPF, and VSPC with a wide range of other development/personal computing facilities.

Good terms of employment include flextime working hours based on 36½ hour week, assistance with relocation in approved circumstances. For application form candidates should apply to:-

City Treasurer (Ref PSO), Council House, Birmingham B3 3AB.
Telephone: 021-235 2993.

Canvassing will disqualify. An equal opportunity employer.

CHIEF SYSTEMS PROGRAMMERS £11,052-£12,738

In addition to in-depth technical knowledge of the appropriate hardware and software, the successful candidates must display the qualities required to lead a team of skilled Systems Programmers and to plan and control the successful implementation of technical projects in a complex environment where performance and availability is a key requirement.

For the three vacant posts in Operating Systems, Communications Network and Operational Service Support, it is unlikely that the persons appointed will have less than 3 years' systems programming experience in a similar environment. However, applications from people with at least 3 years' experience in a large Operations Analysis group would also be considered for the Service Support post.

(7307)

BIRMINGHAM CITY COUNCIL

THE UNIVERSITY OF ASTON IN BIRMINGHAM
MICROPROCESSOR UNIT

LECTURER

Applications are invited for the above post. The Microprocessor Unit provides undergraduate and postgraduate courses, undertakes project investigations and is actively engaged in research. The Unit is associated with the Department of Electrical and Electronic Engineering and provides a University central resource for research, design and development of programmable electronic systems, microprocessors and related computational systems, software and systems engineering.

The lecturer appointed will be expected to undertake general teaching duties which may include contributions to courses in Electrical and Electronic Engineering, Electronic Systems Engineering and Information Technology. The post should provide an excellent opportunity for research.

Applicants should have research interests which complement or augment those outlined above and should have a higher degree or equivalent experience. The appointment will be for a period of three years initially, with the possibility of renewal or subsequent transfer to a continuing appointment. Initial salary will be within and up to the maximum of the range £7,190 to £14,125 per annum.

Application forms and further particulars may be obtained from the Staff Officer (quoting Ref. 589/102), University of Aston in Birmingham, Gosta Green, Birmingham B4 7ET. Tel. 021 359 3811 Ext. 4684. Closing date for the receipt of applications is 10th February, 1984.

UNIVERSITY OF LONDON
CENTRAL INFORMATION SERVICE
SENIOR PROGRAMMER

CIS is a part of the Library Resources Co-ordinating Committee of University of London, and has just been awarded a research project to develop a prototype microcomputer-based expert system for library use. We are looking for a Senior Programmer to take part in the development of this system. Applicants should have experience of designing, writing and testing computer programs in one or more of the main languages (e.g. Pascal, C). Knowledge of a high-level language such as Prolog, Lisp or Logo would be an advantage. Familiarity with microcomputer systems would be preferable.

The initial appointment will be for 18 months, commencing as soon as possible. Salary is negotiable. Further information can be obtained from: Mrs A. Vickers, CIS, University of London Senate House, Malet Street London WC1E 7HU Tel: 01-636 8009, Ext. 5089

(7377)

ANALYST PROGRAMMER MICRODATA SEQUOIA

Bristol/Bath Area
£8154-£9680 per annum

The District Council are installing a Sequoia supporting a network of 30 terminals. Initial work will involve the transfer of systems from an existing mainframe computer. Following this a number of new mainly non-financial applications are planned.

Applications are invited from people with suitable qualifications and experience.

Removal expenses will be reimbursed and there will be assistance towards house sale and purchase fees as appropriate.

Applicants who wish to discuss this post informally with the Computer Manager, are invited to contact Mr. Broome after 23rd January on Ext. 256.

For further details and an application form, please contact Susan Phillips, The Civic Centre, High Street, Kingswood, Bristol BS16 2TR, telephone (0272) 601121, Ext. 212. Please quote post reference CFO/53.

Closing date: 3rd February, 1984.

Kingswood District Council is an equal opportunity employer.

(7391)

Hereford and Worcester
County Council
REDDITCH COLLEGE
Department of Technology
Computer Unit

LECTURER (GRADE 2)

COMPUTING

Required as soon as possible a Lecturer in Computing, Data Processing, Programming and Computer Studies on courses leading to BEC and Higher BEC and Professional Qualifications, BEC/TEC Diploma in Computer Studies, TEC and Higher TEC and other computer courses.

Applicants must possess a degree or equivalent professional qualification preferably with recent commercial and/or teaching experience. Commanding salary within L.I.I range £7,215-£11,588 dependent upon age, qualifications and experience.

Further details of this post, together with application form, may be obtained from:

The Principal, Redditch College, Packman Street, Redditch, Worcs B98 8DW. Telephone: Redditch 63607.

(7393)

HEALTH SERVICE COMPUTING

The Operations Department of the South West Thames Regional Health Authority Computer Centre has the following positions available:

Operations Support Clerk — cf£6-£9k

Experience of Operations and JCL is essential. Previous user liaison experience would be advantageous.

Data Control Clerk — cf£6-£8k

Applicants should have a good knowledge of ICL George 3 JCL and an understanding of Standards and Procedures. Trainees may be considered.

Computer Operator — cf£6-£8k

At least 12 months' experience of ICL George 3 is required. Trainees may be considered.

The Regional Computer Centre is located at Tooting, SW London and current computer services are based on ICL 2956 and 2966 mainframes running under George 3.

DEC mini-computers are also being installed throughout the region to provide Direct Data Capture, Database and Patient Administrative facilities.

Please write with full details or phone:

PUBLIC SECTOR APPOINTMENTS

Computer Operator

£7,782-£9,643 p.a. (including Shift Allowance)
(Two shifts, 7.30 am-11 pm)
IBM 4341 - VM - DOS/VSE

If you have at least 18 months' IBM operating experience and are looking for a position in an expanding installation where your efforts will be recognised, then our career-graded operator post may be of interest to you.

Our machine is an eight megabyte IBM 4341, with 3370 FBA Disks, tapes and printers, plus an ever increasing local and remote T.P. network.

The installation runs DOS/VSE-POWER as a cardless system, controlled on-line through VDUs under QUOTA III (via CICS), as part of the VM-Master System. Experience of CICS and VM would therefore be an advantage.

We also use a variety of Software aids and packages such as the CA-DYNAM range for file control.

Additionally, housed in the Computer Room is a WANG SYSTEM (VS100) with 2 x 280mg disks and a 16mg disk together with two tape drives, which is used for DP and WP projects.

Starting salary will depend on experience to date, and the post is open to men and women.

For further information telephone 01-863 5611 and ask for either David Clark, ext 2193, Ken Durnall, ext 2208, or the Shift Leader, ext 2932.

Application forms, returnable within 14 days of the appearance of this advertisement, from the Controller of Financial Services, London Borough of Harrow, PO Box 21, Civic Centre, Harrow, Middlesex HA1 2UJ. Telephone: 01-863 5611, ext 2338.

(7280)

NORTH EAST THAMES REGIONAL HEALTH AUTHORITY PROGRAMMER/ ANALYSTS

Harold Wood, Essex

This is an opportunity for Programmers with at least two years experience to join teams working on a number of interesting on-line projects.

We have an immediate requirement for two to join the team developing and implementing the Regional Pharmacy System on PDP 11 computers using the MUMPS interactive language. The positions are based at the Regional Computer Centre at Harold Wood, near Romford, Essex and offer:-

- Starting salary to £10,000 depending on experience
- Interesting projects
- Training and development
- Annual salary reviews and scale increments
- Good working conditions
- 36 hour flexible working week
- Pension scheme.

To arrange an informal discussion or to request an application form please contact Eddie Evans, Regional Computer Centre, Harold Wood Hospital, Gubbins Lane, Harold Wood, Romford, Essex. Tel: Ingrebourne 71821.

(7430)

UNIVERSITY OF SURREY ANALYST/PROGRAMMER - DATA PROCESSING

The Data Processing Section of the Computing Unit has a vacancy for an Analyst/Programmer to develop systems for the University's Administration and Library. The successful applicant will develop systems on a variety of computer equipment, programming in Cobol.

Applicants should have proven programming ability and a degree or equivalent qualification.

The appointment will be made on the Computer and Other Related Staff IA salary scale, £2,100-£11,615 per annum, according to age, qualifications and experience.

Further particulars are available from the Staff Office, Guildford GU1 2ET extension 778.

Applications in the form of a curriculum vitae (2 copies) including the names and addresses of two referees should be sent to the Staff Office, University of Surrey, Guildford, Surrey GU2 5XH, by 19 February, 1984 quoting reference 250/CV.

(7280)

COUNCIL OF THE BOROUGH OF OSWESTRY SENIOR TECHNICAL ASSISTANT

Scale 6/501 (£8,154-£9,660)

Applications are invited from suitably experienced persons for this new post in the Finance Division of my Department, to manage and operate all aspects of the Council's computing facilities. The Borough Council is a small authority with a strictly controlled staffing establishment, but committed to using new technology in order to maximise its efficiency.

The successful applicant will be required to operate a Burroughs B1915 computer without supervision or assistance, to introduce new systems and to advise my Principal Finance Officer on all computing matters.

Further details and applications from the address below. Closing date, 11th February, 1984.

Dated 10th February, 1984

(7306)

Are you interested in helping people and being at the forefront of technical developments?

TECHNICAL SERVICES MANAGER SENIOR SYSTEMS ANALYST

£10,446 - £13,030 inc. (NHS SCALE 14)

Bloomsbury is one of the largest Health Authorities in the U.K. and contains five of the best known and most sophisticated teaching hospitals including the Middlesex and University College Hospitals.

Two new senior posts have recently been created in the Computer Services Department to help harness the benefits of new technology for the improvement of patient care. The Department is currently responsible for several highly successful patient information systems running on three networked PDP 11/70 mini computers, a distributed database of 1880 megabytes, several microprocessors and 170 on-line terminal users.

PLANNED DEVELOPMENTS you will be involved in include:

- installation of local (Ethernet) and wide area communications networks over the whole district which includes the greater part of London's West End

- integrated application and information systems covering all aspects of patient care and health management
- a major expansion in the number of mini and microcomputers in use: at least two large minis are planned in 1984.

We need you to have tact, initiative and be educated to degree level to meet the challenge of this worthwhile environment. A minimum of five years computing experience, some of it on DEC equipment and in an interactive environment, is highly desirable. Training will be given where appropriate.

Both positions offer excellent fringe benefits which include:

- Annual salary reviews and scale increments
- Pension scheme
- Season ticket loan
- Sports and social club
- Subsidised luncheon facilities.

For an informal discussion please contact Ruth Grace, District Computer Services Officer, on 01 387 9300 ext. 114/115. Or write to Linda Fitzgerald, Computer Services Department, 25 Grafton Way, London WC1E 6DB for an application form and further details, stating which position you are interested in. Closing date for completed applications: 6th February, 1984.

BLOOMSBURY Health Authority

READER IN COMPUTING

Applicants should have a substantial record of successful research and consultancy in computing. The successful candidate will be expected to take a leading role in the continued development of research including externally funded and collaborative projects.

Salary Scale: £12,519-£15,744

Further particulars: The Establishment Clerk, The Polytechnic, Wolverhampton WV1 1SB.

Closing date: 14 days from appearance of advertisement.

(7382)

EXETER CITY COUNCIL PROGRAMMER

Required in the Computer Section of the City Treasurer's Department to assist with the programming and developing of specific systems.

Sound experience in computer programming (particularly BASIC) is regarded as essential, rather than experience in the public sector or with CMC machines.

Salary negotiable within the scale £7191-£8712

Further details and an application form are available from the Personnel Officer, Civic Centre, Oldfield, Exeter (Tel No Exeter (0392) 77888 Extn. 2125) to whom completed forms should be returned by the 23rd January 1984.

(7188)

TEESIDE POLYTECHNIC COMPUTER CENTRE

WE ARE "AN EQUAL OPPORTUNITIES EMPLOYER"

The Computer Centre provides a computing service for the teaching, research and administrative work of the Polytechnic using 3 interconnected Prime 750 computers.

Applications are invited for a

PROGRAMMER ANALYST

to join the Information and User Support team providing user support including advice and writing technical documents.

The post is graded at Scale 4-5 and the salary, according to qualifications and experience, will be on the following scale: £6,264-£7,712 per annum.

Application forms and further particulars from the Personnel Section, Teesside Polytechnic, Borough Road, Middlesbrough, Cleveland TS1 3BA.

Telephone (0642) 218121, Ext. 4114

Closing date for applications - January 31, 1984.

(7047)

PUBLIC HEALTH LABORATORY SERVICE COMMUNICABLE DISEASE SURVEILLANCE CENTRE SENIOR COMPUTER SCIENTIST/STATISTICIAN

Scale 8 Salary scale £9,950-£16,800 Incl. of London Weighting

The Communicable Disease Surveillance Centre, the unit within the Public Health Laboratory Service with national responsibility for surveillance and control of communicable disease, is looking for a senior computer scientist to work with a team of medical epidemiologists and other scientists in the exciting field. You will be responsible for statistical computing at the Centre which will include the running of a communicable disease information system and advising on the analysis of data collected in the course of the investigation of outbreaks of communicable disease and of larger scale research projects.

At least two years relevant experience and a knowledge of FORTRAN are essential and familiarity with statistical packages, ICL GEORGE-III, FILETAB and COBOL would be an advantage.

An application form, job description and further particulars may be obtained from Mr A. A. Collins, Centre Administrator, PHLS Communicable Disease Surveillance Centre, 61 Colindale Avenue, London NW9 5EQ. Tel. 01-200 6885. Closing date: 2nd February, 1984.

(7225)

GWENT COLLEGE OF HIGHER EDUCATION FACULTY OF INFORMATION SCIENCE AND SYSTEMS TECHNOLOGY

SENIOR LECTURER IN COMPUTING

Applicants should be graduates with a broad experience of computer science and able to offer a high level of expertise in particular areas. Teaching experience at HNC/HND or degree level is desirable.

Salary: £7,215-£13,443.

Further details and application forms may be obtained from, and should be returned within ten days of appearance of advertisement, to: The College Secretary, Gwent College of Higher Education, College Crescent, Caerleon, Gwent, NP6 1XJ.

(7248)

COBOL PROGRAMMER HP 3000

circa £8,500 p.a.

Hammicks Book Shops Limited are a leading book retail/wholesale company. All company systems are at present run on an HP 3000 Series III system with 1 1/2 mb main memory and 360 mb of disc storage.

Reporting to the Computer Manager, this is an opportunity to join an energetic expanding company, with major developments in point of sale data capture and the most innovative systems in the book trade. The position will involve user liaison, systems analysis as well as the writing of new systems and maintaining of current systems.

The ideal applicant will be aged under 30 with a good knowledge of COBOL programming using IMAGE Database and VIEW.

Please write giving full employment history to:

Stephen Mansfield
Management Services Director
Hammicks Book Shops Ltd
Alton, Hants GU34 2PJ

SENIOR

SALES EXECUTIVES NOBODY DOES IT BETTER!

In fact, only one other manufacturer does it at all!

Our client manufactures a computer system that is so predominant and successful that to mention the particular market place would instantly reveal the product concerned. Yet it is only one of a range of minicomputers with a system price ranging from £25,000 to £500,000. The company has a considerable reputation for product excellence and its ability to sustain a growth rate of 30% per annum is in no small way due to the through-range compatibility, as well as being one of the very few computer manufacturers able to provide commercial and industrial turnkey systems without necessarily having to rely on external systems houses.

Last year the company once again enjoyed considerable success with the top echelon of the sales force earning in excess of £50,000, due not only to effective selling, but also aided by a high level of pre- and post-sales support and low staff turnover - the hallmark of a happy company!

This continuing expansion has consequently created a demand for additional sales people in

LONDON & HOME COUNTIES MIDLANDS & NORTH

We are therefore seeking a couple of sales people from a hardware systems or computer services background, who really understand industrial and commercial applications. This is an opportunity that will particularly appeal to talented sales people who feel that their potential is not really being achieved.

Our client offers a very attractive compensation plan with low sales targets and high earnings with a company car and guaranteed minimum first year earnings of around £20,000. Yet, this guarantee is not set against new business commission earnings!

Please contact Alasdair Scott, Lindsay Howle, or Mike Lintford, quoting reference SSB014.

OPENINGS IN BERKSHIRE

Contract Positions

Senior Project Engineers/Project Engineers. Exp or computer general hardware.

Senior Programmer/Programmers. Exp or PASCAL VMS/VAX.

Permanent Positions

SALES SUPPORT ENGINEERS: Micro-Electronics or chip knowledge essential quails. BSc Level. Salary expectation £18K to £17K.

TECHNICAL SALES: Previous sales experience necessary technical competent in Micros - Electronics on I.C.s quails HNC minimum. Salary circa £20K.

SALES BIT

Quality of Management - 79

Surprise your trainee - join him for a full day in the field

A BASIC rule of field training is that only two representatives of your company should be involved - typically the salesman and his manager. There is no additional room for visiting dignitaries, trainees, or yo-yos from head office.

What we are talking about is a serious selling and training call which means that any possibility of intimidating the client or the salesman by weight of numbers must be avoided.

The field training exercise must be based on a normal working day if it is to be effective. Involvement in a sequence of sales calls that have been specially set up by the salesman to create the best possible impression is of little educational value.

It is important to discover not only how the salesman operates within the individual sales call but

The sales manager must be seen to put in a full working day rather than sloping off in the middle of the afternoon with lame excuses about "sorting out a few problems back at the office"

also how he organises his normal working day.

There is only one effective way of achieving such an insight and that is surprise!

Don't make arrangements to accompany your salespeople well in advance - make them the previous evening. After all, what hardworking and well-organised salesman could object to that?

It may turn out that he has to make alternative arrangements for getting his kids to school, or it may completely ruin his afternoon game of golf. But who's the real bad guy in that situation? Certainly not the sales manager trying to do a normal day's work and trying to gain a true perspective of what his salespeople are giving in return for a "fair day's pay".

By the same token the sales manager must be seen to put in a full working day rather than sloping off in the middle of the afternoon with lame excuses about "sorting out a few problems back at the office." The salesman is almost certain to draw the conclusion that a full selling day is too much for you.

So, if the boss feels the need to terminate the selling day at 4pm, why shouldn't he?

The field training session should be like any other selling day with the first call at 8.30am, or the earliest time a sales visit can normally be made, and the last at the very end of the business day. Anything else merely condones insufficient discipline and lack of commitment.

One important discipline is deliberately to make a few calls yourself with the salesman in the background. I am not talking about taking over a call while it is in process - this should be avoided at all costs - but agreeing with the salesman before the call is made that you will handle this one, and his role is merely to observe and criticise. This is particularly relevant to sales trainees.

Many sales managers are reluctant to put themselves on display in this way for fear of making mistakes, or perhaps looking foolish in front of a subordinate. This is misplaced insecurity. What is the point of the exercise - to prove that you are infallible, the perfect salesman? Of course not - it is to give the salesman the assurance of knowing that all sales people make mistakes, and the object lesson is witnessing that one can often learn more from seeing other people make mistakes.

It also makes the point that you are not a head office theorist but rather someone who really appreciates the realities of the field, and above all you are a normal fallible human being to whom the salesman can relate.

It's worth mentioning the implications of occasionally subcontracting field training to senior salespeople. The first person who comes to mind is your star salesman. It may seem logical that the salesman who has the ability to top the league table year after year should have the right skills to pass on to the aspiring young salesman, but you couldn't be more wrong.

Top performers more often than not break the rules and cut corners, but you allow them to get away with it because they consistently over-perform.

The effect on a sales trainee of being exposed to this kind of salesman is to accept a method of operation that is unlikely to work for him or to be completely demoralised by the apparent ease and confidence with which the ace salesman is able to get the business.

The right kind of senior salesman to provide field training is one of your well established con-

The right kind of senior salesman to provide field training is one of your well-established consistent "target performers"

sistent "target performers". He is the kind of person who always operates by the book, always keeps his paperwork in order, never fails to work a full day and sees training a "rookie" as an attractive challenge rather than an imposition.

One final point: be sure to follow up the training session with a note to the salesman, not only highlighting the most salient points to come out of your visit, but also thanking him for his time. It is a courtesy that will not go unnoticed and make it clear that you consider the time spent together important and worthwhile.

In other words, treat him as you would expect him to treat your company's clients.

CSA fears reshuffle at DoTI will hit industry

by John Kavanagh
THE reshuffle of top civil servants at the Department of Trade and Industry has come at the wrong time for the computer industry and could further delay government decisions on key issues.
That is the view of the Computing Services Association (CSA), which points to delays in decisions on support for exporting and for educational software. It is also concerned about the future role of British Telecom in the computing business.
Six under-secretaries are changing jobs. The department says it is normal for civil servants to move after three or four years. But CSA director-general Doug Eycions says they should stay longer.
"A lot of the issues in our industry are very technical," he says. "All these people were doing good jobs, but just as they get a feel for the industry, they get moved on."
Eycions says the reshuffle followed a "frustrating" 1983. Decisions had been delayed because of

the election, the merging of the trade and industry departments and the appointment and subsequent resignation of industry secretary Cecil Parkinson.
As a result, the UK could miss out on the world market for software for schools, Eycions says. "This market is relatively small in the UK but it could be a major export market - and the UK has the right pedigree to be successful," he says.
"The UK has a high reputation in educational publishing and in software, and English is widely used in education around the world."
"We should be building up a strong home base of proven software - but we need a government lead. One problem is that it's not even clear which department it should come under."
This comment reflects the fact that microcomputers have been put in UK schools with backing from the Department of Trade and Industry, but the Department of

Education and Science is responsible for training teachers.
Eycions also points to the long-overdue decision on further funding for the government's Export IT organisation, set up at the end of 1981 with one year's money. It is still surviving on that initial backing.
David Broad, chairman of the British Microcomputer Manufacturers Group, is worried that the department could get bogged down in the Telecommunications Bill and the sale of British Telecom to the private sector.
"Our worry is that the size and complexity of the bill will create an enormous workload and thus put back some other very important issues," he says.
The CSA is concerned about the future of British Telecom's BT Enterprises, which sells telephones, network services, information services and business systems and software. At a top-level CSA meeting last week, members said they were worried

that BT Enterprises could get unfair advantages from its links with its parent.
BT says each subsidiary is a proper profit centre, paying for its own telephones, buildings and promotion.
"We've had assurances from BT - but who's to judge whether it's overstepping the mark?" Eycions says.
BT Merlin, the business systems arm, has 3.5 million business customers because it handles the sale of telephone exchanges, modems and teleprinters.
Under the reshuffle Alistair McDonald, head of the information technology division, replaces Jonathan Solomon, who moves to head the quality and education division. Jack Leeming goes from there to the space. Post Office and film industry division. He takes over from Philip Cooper, who is going to the department's Warren Spring Laboratory because the director, Dr Alan Robinson, is retiring.

EYCIONS... "A frustrating 1983."

Tycom takes a Rita

by George Black
MICRO manufacturer Tycom has followed its scoop of the Tory Party contract by victory in the Rita (Recognition of Information Technology Achievement) awards.
The maker of the "future-proofed" Microframe has been named Newcomer of the Year, a title sponsored by Computer Weekly under the Rita scheme.
Tycom, under managing director Allen Timpany, was chosen as the start-up company that the judges thought was the best example of how Britain could remain a force in IT markets. The results were announced on Tuesday night at the Which Computer? Show in Birmingham.
Telemap - the consortium made up of British Telecom, BMAP Publications and distributor Prism - won the systems innovation prize for its Micronet 800, the modern link giving micro users access to Prestel and allowing

PERSONALITY OF THE YEAR award: Ashton-Tate had the satisfaction of beating IBM to the award for User Training Manual of the Year for its documentation of Friday, and software Product of the Year was Micro, the application of code generator produced by Camsoft Software of Dorking, Surrey.
Supplier of the Year was Bearmaster of Ilford, a software house supplying low-priced micro support and accounting packages, and User of the Year was the property group, Haslemere Estates.

US Defence bids to stifle personal computers

by George Black
THE US Department of Defence is talking to NATO's co-ordinating committee on controls of exports (COCOM) about clamping down on the flow of personal computers.
A US government spokesman said the matter was "under some study" and it was likely that there would be "some change in policy". He would not comment on speculation that the world's best-selling micro, the IBM-PC, would be affected or that all 16-bit machines would need licences to be exported to the Eastern bloc.
US trade department officials, who have been fighting the Pen-

gun's move to impose tight controls on the movement of high technology products, are arguing that it is already too late to have any impact on the traffic in 16-bit machines such as the IBM-PC, of which hundreds of thousands of units have already been sold.
The discussions will give new momentum to the issue of export controls - or to what extent the US can lay down conditions for the use of its products beyond its own shores.
An industry department delegation to Washington next month, headed by secretary of state Norman Tebbit, will be arguing the

view that the US has overstepped the limits. Industry department officials have been talking to IBM about its recent directive to 30 leading British users of its mainframe hardware advising them about the need for US licences.
IBM told its customers that US export rules restricted them from moving or re-selling their equipment and to do this they needed to apply to either the American Em-

bassy in London or the Commerce Department in Washington.
The rules are framed in the US Export Administration Act which expired in the autumn, and which is only being kept in force through emergency measures taken by President Reagan. With the US administration resuming work after the Christmas recess, the battle over the shape of the new act will also be hotting up again.

So what's new in the public sector?

The Chartered Institute of Public Finance and Accountancy will be promoting a financial modelling workshop and exhibition alongside its annual conference in Brighton on June 6 and 7, 1984.

As a supplier it will provide a unique opportunity for you to bring your products to the attention of delegates from the whole of the public sector.

As a user you can up-date yourself on the latest technology and techniques available.

Thursday, January 26, 1984 Number 895 35p

Europe takes a step closer to unity

by Donald Kennett
ANOTHER step towards the creation of a unified European information technology market was taken last week with the agreement by Europe's telecommunications authorities to accelerate their move towards common standards.
Responding to a request from the European commission, senior telecommunications officials from the 26 countries in CEPT (the Conference of European Postal and Telecommunications authorities) agreed at a private meeting in Paris to speed up their programme of network harmonisation and interface standardisation.
The work is expected to take

some time and no details were released about the measures that will be taken to achieve it. A British Telecom spokesman said, however, that a central theme would be digital interfaces for terminal equipment to facilitate end-to-end communication between users across national boundaries. The harmonisation of standards would increase the opportunities for the expansion of information technology across Europe, he added.
The harmonisation of standards was singled out as one of the six "action lines" for telecommunications adopted by the European Council of Ministers in September. The Commission followed that up by convening a group of officials close to the industry ministers in each of the member states to progress the policy.
The group has met in Brussels three times since November to discuss the detail of the actions. It plans its next meeting early next month. Other action lines in the EEC strategy cover co-ordinated planning, common R&D, transnational links, developing the telecommunications infrastructures of the poorer EEC countries, and opening public procurement in EEC countries to supply from other EEC countries.

Standards have been a problem in that even where they have been developed internationally they have been implemented differently in different countries. X25 is said to be a prime example of this.
As EEC IT task force chief, Michel Carpentier, pointed out late last year that an effectively harmonised European IT market would be 30% of the world's total, whereas no European country accounts for more than 4% of the world market on its own.
Such a harmonised market would give European manufacturers a significant advantage in developing products to compete with the much-feared Japanese, whose home market accounts for 12% of the world.

HOLDEN... "People are more concerned with efficiency."

Drive for efficiency shows in training

by Philip Hunter
THE systems analysis training market is booming, while demand for the traditional courses in programming has fallen off, according to a survey due next month from the National Computing Centre.
Fewer programmers have been changing jobs during the recession, the survey says, and their employers have therefore been more willing to train them in systems design and fourth genera-

tion applications generators.
"People are becoming more concerned with efficiency of systems," explains Keith Holden, NCC group manager for training. Firms are sending their people on courses about systems maintenance and design.
Another reason for the trend is that many government contracts awarded by the CCTA specify

trial put off
THE full trial of the case between Mercury, the private telecommunications company, and the telecommunications union, the POEU, looks like being put off until July. It was expected to be heard this month. The date will be set at a preliminary hearing on February 28. Mercury is seeking a permanent injunction to stop the POEU taking industrial action against it.

Continued on page 2

Users are unhappy with their support

by John Riley
MAINFRAME and minicomputer manufacturers should give their users better technical support and better applications software. Those are the main complaints to emerge from this year's Computer Weekly/Datapro user satisfaction survey.
Twice as many users responded to this year's survey, the largest so far with 2,064 responses. Apart from the two general grouses, most are satisfied with their machines overall. Moreover, most of those

users who are not satisfied with their machines say that they will stay loyal to their manufacturers.
Unsatisfactory technical support - in user education, documentation and trouble-shooting system faults - was also the main overall complaint last year, which suggests that in general manufacturers are turning a deaf ear to users' complaints in those areas.
The IBM plug-compatible

manufacturers, Amdahl and National Advanced Systems (NAS), top the poll in the mainframe section for overall satisfaction, and nearly 400 IBM mainframe users give IBM a vote of confidence.
The two mainframe companies that came lowest overall in the satisfaction ratings last year, Sperry and NCR, also come lowest this year.
However, there is a sharp increase in the number of users prepared to recommend their

systems, and less than 5% of Sperry and NCR users intend to switch to another manufacturer.
Hewlett-Packard, Digital Equipment and Perkin-Elmer top the user satisfaction ratings in the minicomputer section, and IBM comes fourth.
Several minicomputer companies are down on last year; the company with the biggest drop in user satisfaction is NCR, mainly due to lack of all the promised software of support and late installation of equipment.

Tebbit promises re-export protest

by George Black

WASHINGTON has backed up IBM over its letter to 30 top UK customers reminding them of their obligations under American licensing regulations.

A statement from the Commerce Department confirms IBM's position that transfers of listed machinery between different users has to be notified, whether within the UK or on re-export.

But it admits that the regulations are "not totally clear" and adds that over the years the Office of Export Administration has "interpreted" them in this way.

The statement will provide the focus for a protest to be led by Secretary of State Norman Tebbit when he visits Washington early next month.

He will meet the heads of several US government departments, and has Mrs Thatcher's personal support for a tough negotiating line on free trade in technology.

Tebbit will also discuss proposed new rules published by the Commerce Department last week which would limit the issuing of general distribution licences for high technology, and which would tighten procedures for selling goods outside Cocom (Nato co-ordinating committee) countries. Until now, general licences have allowed multiple shipments under a single permit by US manufacturers to foreign customers. The proposed changes would make the licences harder to obtain and harder to comply with.

The draft Commerce Department rules have brought an angry reaction from European companies and governments, who see them as restricting trade and being another example of the US trying to impose its laws outside its own borders.

Commerce Department officials are embarrassed by IBM's sending the letter without consulting them and - as they see it - stretching the interpretation of the regulations to the limit.

They are keen to dissociate themselves from the clampdown policy advocated by the Pentagon. But IBM's action has forced their hand and will bring the whole matter to a head during the Washington visit.

Speaking on the Radio 4 programme *Today*, Tebbit quoted IBM's letter and commented: "That is quite clearly an attempt by the US government to impose its laws within the UK, and that of course is contrary to international law."

In "words of guidance to the management of IBM UK" he said: "Unless this problem is resolved - and I understand its parent company has got some influence in the US - it is going to be extremely bad for its business."

But while promising strong action on the matter of principle, Tebbit advised lessors to stay cautious in practice.

He said: "This arrangement has been going on for some time and there have never been any problems. Permissions have been granted more or less automatically."

IBM declined to comment on Tebbit's statement, but denies that its action had been prompted by pressure from any US government source. A spokesman says it has not had official advice from the US government before issuing the letter, but did in general seek guidance on the correct interpretation of the US law.

A company representative told a meeting of the Computer Users' Association at its South Bank office last week that the letter had been issued in their interests, to warn them of the possible consequences of non-compliance. Afterwards the group's chairman, George Goodwin, said there had been no objections from members.

IBM managers met Trade and Industry Department officials at the company's request to explain why they had sent the letter. A spokesman said they had not been asked to withdraw or modify the letter and had not offered to do so.

The IBM machines affected are its advanced systems, those with a CPU bus rate of 60 million bits per second and a processing data rate of at least 20 million.

Liberal industry spokesman Paddy Ashdown has called for a Commons debate on the subject. He pressed the Leader of the House John Biffen on Thursday for time for an adjournment debate and has written to Tebbit asking for a full explanation of his policy.

TEBBIT... "Contrary to international law."

The Welsh seek help for their language

by our Parliamentary Correspondent

WELSH Nationalist MP Dafydd Wigley has been pursuing the Welsh Secretary and his junior Ministers in the Commons over the lack of facilities for computer technology in the Welsh language.

John Steadling Thomas, Minister of State for Wales, told MPs that the Welsh joint education committee steering committee, which was the agent for the microelectronics education programme in Wales, has been allocated £465,000 from central funds to cover the first three years of the programme. Comparable resources would be made available for the two additional years up to 1986. Additional funds had been provided for the purchase of a mobile caravan and accommodation for the regional information centre - £20,000 for the two projects.

The Minister said that so far the steering committee had not received applications for any curriculum development project for microelectronics which would involve the production of Welsh language material.

Lord Lyell, a government spokesman in the Lords, announced during a short debate on progress with the Alvey report that the strategy for the programme has now been completed.

The directorate planning the programme would work closely with industry to reflect the country's own priorities and to tap expertise in government and academic institutions, he said.

The Lords also debated the Telecommunications Bill, which passed the Commons before Christmas, and gave the Bill its second reading.

Lord Bruce (Labour) claimed that the Bill was a hoax on the taxpayer, did not serve the public interest, and its main purpose was to raise money for the Exchequer in good time for tax cuts before the next General Election, he said.

Viscount Mersey asked about the academic standards of the UK's 122 information technology centres. Was there too much emphasis on space invaders, and what percentage of students actually got jobs in the computer industry, writing games or otherwise? he wanted to know.

Osborne falls in with IBM

by John Riley

PORTABLE microcomputer manufacturer Osborne Computer has latched itself on to IBM's apron strings with the launch last week of its long-awaited, IBM-compatible, portable microcomputer. At the same time, Osborne also announced new financial plans, which will result in local independence in the UK.

The new micro, called Osborne PC, is based on a 4.77MHz Intel 8088 microprocessor, with an optional 8087 chip. It offers CP/M-86 and MS-DOS as standard and has 256 Kbytes RAM expandable to 512 Kbytes. Like the Executive which it replaces, it has a seven-inch screen.

According to Osborne, it runs all IBM software without modification.

Osborne's UK managing director, Mike Healy, expects to take advantage of increased aggressive marketing by IBM. "We believe that the IBM PC will wipe out ACT's Sirius, and we'll sit alongside," he said at the Which Computer Show last week.

He added that the machine would go into production in the UK "for delivery mid-1984". He was not able to release more details of this, other than that the manufacture of Osborne products in the UK would be sub-contracted.

Osborne suffered a severe setback in the US last year with a dramatic slump in US sales from 27,000 units a month to a figure estimated variously at between 2,000 to 9,000 a month between January and June, accompanied by large lay-offs in its workforce.

"It's a tribute to our strength prior to the crisis that we've survived it," said Healy, who is anxious to point out that Osborne has never gone under. "We've never been out of business in the UK or the US," he explains.

"The Chapter II legislation we were under has been misunderstood. It is a re-organisation device and doesn't mean liquidation."

The new financial re-organisation involves attracting local finance in the UK through equity financing, according to Healy. "There will be more local ownership and the parent in the US will become a minority shareholder."

CSC, the independent computer maintenance company, recently got the contract to provide full national coverage for repair and warranty of Osborne computers.

McGARVIE... "We will act in a pollinating function."

CDC swings into third party sales

by John Riley

US MAINFRAME and peripherals manufacturer Control Data (CDC) is to sell third party software and microcomputers as part of its strategy to expand its services organisation.

Campbell McGarvie, Control Data's director of services, says this is just one of the company's objectives for 1984. There are also plans to boost the company's training system, Plato, to set up alternative distribution channels, and to take over or make joint venture deals with other companies, especially software companies.

"We will become vendors of non-CDC software to non-CDC users," says McGarvie, "and will sell other people's micros."

He explains that he expects to look at "smaller software establishments without a marketing vehicle. We will act in a pollinating function - taking developed software from smaller organisations and applying it to larger organisations on a vertical basis."

That is the philosophy behind Control Data's announcement last week of software deals with two Californian software companies, Via Computer and PFR Engineering Systems, to market respectively a financial modelling package for micros and petrochemical applications software.

McGarvie also confirms Control Data's commitment to Plato, the computer learning system, developed over 18 years at a cost of \$800 million.

Control Data will use its S-Series micros from its Leeds-based subsidiary, Systime, as delivery systems for Plato and extend its applications into the smaller business sector.

"We aim to make Plato more competitive by offering it on micros for the office, although it can still be put on mainframes. It is a different approach, but the organisation will remain intact."

McGarvie gives few details about the move into microcomputer sales, saying that negotiations are in progress. The company already sells one Altyc disc drive to the IBM PC market.

Revenues for Control Data in the UK were up overall from £117 million in 1982 to £140 million in 1983, according to McGarvie, and all four sectors - the magnetic media operations, computer supply operations, and the hardware and services businesses - showed increased revenues.

However, the target of doubling the installed mainframe base to 32 during 1983 has not been reached. There are 19 sites in the UK, mostly very large systems. McGarvie attributes this to the later than expected launch of the bottom end mainframes last year.

"We will see a big thrust into the small and medium sized mainframe market this year," he says.

Japanese threaten IBM's top system

by Keith Holder

IBM's top-of-the-line 4300 mainframe system is under attack from a Japanese built, plug-compatible rival, only months after its debut.

Hitachi will make its latest processor available in Europe from the second quarter through marketing agreements with BASF and National Advanced Systems. The new system is designed to outperform the IBM 4381 and offer a better upgrade path to larger machines, comparable to IBM's 308X series.

Two versions are available each offering a capacity of three or four mips, expandable to 15 mips. They will also support all known operating systems, according to BASF, which has called its machines the 771 and 772.

Barry Graham, N.A.S. European systems director, says there is a market for the machines, which N.A.S. calls the 8020 and 8030, with users who are looking at long-term investment from a 4381 machine.

Both are hoping to exploit what they see as weaknesses in IBM's upgrade strategy for 4300 users.

The upgrade path for 4300s is a sensitive issue, even among IBM's faithful. George Goodwin, of the IBM user group, says there is discontent in two areas.

There is pressure by IBM for users to adopt MVS, IBM's flagship operating system, for any future systems, which is not always what the users want, Goodwin says.

"There are a lot of 4300 users running VM and DOS/VSE who are not at all enthusiastic about IBM's bigger ranges because they want to follow other paths."

The second problem is purely mechanical, involving a change from air cooling to water cooling for the 308X series, which can disrupt departments and impose a further financial burden on the user. This step can be postponed, or eliminated altogether, using PCM processors. The entire BASF range, for example, is air cooled.

Goodwin says any uncertainty or discontent by users can only provide increased opportunities for PCM companies to peddle their systems to the disaffected.

The quick response to the 4381 by BASF and N.A.S. serves to underline the need by PCMs to get their equipment on to the market as soon as possible.

"The market is a constantly moving target," says Rolf Brilinger, European marketing manager for BASF.

"If you can't guarantee a two-year life for a product, before the need to update, then it is just not worth doing."

The new machines close a gap in both companies' processor ranges, between models, designed to compete with IBM's 4341, and those aimed at the 308X series.

They also take away the temporary performance advantage IBM gained when the 4381 was launched.

Systems analysis training demand grows

From front page

development techniques such as LBMS (Learnmath and Burchett Management Systems). Gordon Ewan, head of Cosit, the Computer Services Industry Training Council, says this means increased demand for training in high level management and systems design techniques. "The basic technical training market is quite well cracked now, and people are moving up the scale," says Ewan.

The overall boom in training in producing a shortage of skilled teachers, Ewan adds. "Training companies are finding out a bit of what they've been telling the industry about staff shortages."

Another big growth area has been in sales training, as the industry realises the importance of marketing. Some of the upmarket suppliers of business packages like Peachtree now insist that their dealers take training in sales and installation.

The survey, based on returns of questionnaires from 400 NCC members, shows that the training market is growing in real value at about 5% per annum, and should continue in the next two years.

Lord Bruce (Labour) claimed that the Bill was a hoax on the taxpayer, did not serve the public interest, and its main purpose was to raise money for the Exchequer in good time for tax cuts before the next General Election, he said.

Viscount Mersey asked about the academic standards of the UK's 122 information technology centres. Was there too much emphasis on space invaders, and what percentage of students actually got jobs in the computer industry, writing games or otherwise? he wanted to know.

WANG

We can provide you with the right system

With the wide range of micro systems available today, you have to be certain that the company you're dealing with has the kind of strength we can offer. A complete computer organisation with the resources today and the strength to serve you far into the future.

You need the assurance of a supplier with an established client list of over 6,000 companies, a large number of which are in the 'Times Top 1,000'. An enviable record with leading city institutions, banks, accounting firms and insurance companies. An organisation with experience across a wide range of industries, from petroleum and engineering to manufacturing and retailing.

You need to be offered a choice from the most advanced 16bit computers available, IBMPC/Sirius/Seiko Series 8600/Apricot/Wang backed up by an effective after sales service, a research and technical centre, training, distribution and software, all co-ordinated by our systems division.

To know you are installing the right computer, you need a systems division, not only with our experience, but also with the ability to call on some of the best software expertise in the country.

In addition to our highly successful software packages, for financial planning (Micro Modeller), information retrieval, business graphics, communications and insurance broking, we supply a large range of industry standard programs and word-processing packages, to ensure that the right system is selected for your business.

Our customers benefit from a strength that runs right to the core. Our technical centre and Intelligence Research, the innovators of the much acclaimed IBM accelerator board, ensure the finest technical back up.

Our depth of knowledge and experience backed by our financial stability are qualifications you must insist on as you increase your computer commitment.

Telephone us on 01 740 5758 and we will show you a company and products that will impress you.

Tailor scotches micro plans

THE stacking of 48 computer staff at Tesco Stores has proved the final straw to break Hepworth's plans to move into microcomputer retailing. The big UK tailor was ready to sell IBM and NEC computers through some of its 300 high street stores in partnership with systems firm Data Logic.

"We've put the plans on ice, because the market is too volatile as the Tesco stacking have shown," says Martin Chatwin, head of Hepworth's Computer Services.

Data Logic marketing director Bob Tharley says his company has separately come to the same conclusion. Data Logic is now putting together a strategy for workstations and systems from its big Tesco stackings came at the start of the year. They involved 10% of the company's computing division, including two top men in the microcomputer retailing business.

Intel settles its copyright case

by Philip Hunter

INTEL has settled its copyright dispute with Nippon Electric Company (NEC) over unlicensed second sourcing of microprocessors.

Terms of the settlement have not been disclosed, but NEC is understood to have agreed to stop making the 8086 16-bit processor, while being allowed to continue second sourcing the 8080 and 8085 eight-bit families.

This would mean that NEC no longer has a 16-bit processor, and could be a leading contender to second source the new NS16000 16 and 32-bit family of chips from National Semiconductor. But NEC would not comment on the position.

Meanwhile Intel is putting pressure on another Japanese company Mitsubishi, to come to a settlement over second sourcing of chips.

Both Mitsubishi and NEC have made copies of our processors that violate copyright protection," says Dave House, Intel vice president and general manager for microprocessors.

"Mitsubishi has reverse engineered the product and would like to license it."

With ever increasing demand for 16-bit processors, and longer delivery times, Intel is itself under pressure to find another recognised second source, as well as to step up its own production.

House admits that Intel is going

to find it difficult satisfying demand this year.

"We think we're going to keep our customers aloft, but the market's going to be pretty tight."

House adds that Intel is investing heavily this year to expand its chip making plants in the US.

Intel's official second sources for its 8086 16-bit family of processors are Advanced Micro Devices in the US, Siemens in Europe, and Fujitsu in Japan, with Mitsubishi possibly to be added to the list. In the US, Harris also produces a CMOS version of the 8086.

Intel is the world's leading supplier of 16-bit processors, delivering 14 million 8086s in 1982. IBM has a 17.5% stake in the company, with the option of raising its holding to 30%.

HOUSE... "Mitsubishi would like to licence it."

Young French say they're unhappy

by Jack Gee

FRENCH computer specialists are young, got bigger salary increases in 1983 than people in other industries, earn 153,000 francs (£12,400) a year on average, but are dissatisfied with their income and expect a drop in living standards this year, according to a national survey.

Although women account for 37% of France's working population, they represent only 15% of staff in the computer industry — compared with 18% a year ago — and are even fewer in the top echelons.

Industry weekly *OI Informatique Hebdo*, which has conducted the investigation about working conditions, says that although 29% of analysts and programmers are female, they account for only 13% of project chiefs and 4% of managers.

Many specialists holding down

jobs as departmental chiefs claim they are earning salaries at the level of an analyst programmer.

OI Informatique says that more and more jobs are being offered by service firms.

These totalled 30% of all advertised vacancies last year.

Service firms employ about 15% of France's computer specialists.

The average age in the industry is 32. This marks no change over the past 10 years. With an average salary of 153,000 francs (£12,400), the computer specialist got a 10% rise in 1983 while national wages increases were limited to 8% by the government in the framework of its austerity programme.

However, although the computer specialist enjoyed about a 0.5% improvement in his living standards last year, he is less optimistic about 1984, the survey reports.

The 100,000 francs a year salary mark, equivalent to £8,000 in Britain, was topped by 78% of people in the industry last year. In 1982 only 68% passed this level, 53% in 1980 and 28% in 1977.

Those who earn more than 100,000 francs include 98% of managers and sales people, 96% of project leaders, 61% of programmer-analysts and 55% of programmers.

OI Informatique says that 41% consider they are earning more than people with comparable qualifications in other industries and 44% felt they were getting equal salary treatment.

Staff earning under 130,000 francs (£10,400) a year said they were unhappy in their jobs and those with salaries below 107,000 francs (£8,560) reported dissatisfaction with their earnings.

Supermini maker goes downmarket

by John Riley

PERKIN-ELMER extended down into the microcomputer market with the launch of its Motorola 68000-based workstation at the Which Computer Show last week.

Called the 7350 Professional Computer, and offering a Unix System III-based operating system, it offers compatibility with Perkin-Elmer's Series 3200 32-bit minicomputers.

"This rounds out our product strategy," says Fred Mascarenhas, Perkin-Elmer's UK marketing manager. "We now cover the market from micros to mainframes — from 0.3 to 21 MIPS — with one industry operating system across the range."

"Our strategy contrasts with that of IBM and Digital Equipment," Mascarenhas adds. "IBM has a lot of different operating systems, so that software that works on small machines won't work on large ones. DEC's total strategy is confused with no common compatibility between its three different micro systems, its PDP and Vax minis and its Dec-System 10 and 20s."

Perkin-Elmer's 7350 Professional Computer comes in three configurations: a single-user

workstation with 320 Kbytes user memory and 15 Mbytes of Winchester disc storage; a colour graphics workstation with 445 Kbytes user memory; and a multifunction cluster controller console version which enables three terminals to be added, although these do not have access to graphics facilities.

Mascarenhas claims that the colour graphics version is the first to be based on the 32/16-bit 68000 chip. He says the 7350 machine has "soft" programmable keys and expects to ship 300-400 machines this year — mainly to large and users and existing customers. A typical price for the single user version is £7,430 and that of the colour graphics workstation is £9,200.

The launch of the 7350 marks an extension of Perkin-Elmer's push into the commercial market, initiated last October when it signed up Brighton-based ABS Computers, itself a minimaker, as an OEM.

Several applications packages come with the machine. These include Ace Microsystems' Lex/32 word processing package, Access Technology's Supercomp-Twenty spreadsheet system, and Precision Visuals' DI-3000 and Grafmaker graphics packages.

MASCARENHAS... "This rounds out product strategy."

Small firms get free export advice

SMALL firms trying to export can get £100 worth of free advice from Technical Help for Exporters, a 60-strong consultancy backed by the British Overseas Trade Board and the British Standards Institution.

The organisation provides information on overseas regulations, codes of practice, technical standards for manufactured goods and so on. The offer runs until the end of the year. It applies to UK manufacturing firms with up to 200 staff at the site concerned.

Technical Help for Exporters is at the BSI, Linford Wood, Milton Keynes MK14 6LE. Tel: (0908) 320033.

HP distributor

HEWLETT-PACKARD has appointed Midlectron to distribute and support its micro, the HPI150. The deal will be worth at least £4 million in the first year. Midlectron is to establish a network of 40 dealers in areas where HP is not represented. The two companies have already done business together, with Midlectron distributing HP printer and plotter products.

Access widens

USERS of IBM PCs and compatible micros will soon have access to a wider range of machines on Ethernet local area networks following an agreement on network software compatibility between Bridge Communications and 3Com. Sphinx, which holds UK marketing rights for Bridge products, says that 3Com, which makes Ethernet boards for the IBM-PC, has made its software totally compatible with Xerox Network Systems protocols used by Bridge and others.

Toshiba dealers

TOSHIBA distributor Scan Computers has signed the first of a nationwide chain of dealers. Hart Computers will sell Toshiba T-300 micros and P1350 printers in London and the south. Scan Computers was appointed sole UK distributor for Toshiba last September and plans to set up a nationwide network of dealers by the spring.

Texas manager

TEXAS Instruments announced the appointment of a new managing director, Peter Van Cuylenberg, last week. Aged 35, Van Cuylenberg has worked for Texas Instruments since 1973, joining them from EMI, where he worked in electronics. He replaced Rod Atwell who left in December 1983 to join Systime. Van Cuylenberg has worked for TI in Austin, Texas, where he was in the home and personal computer division, and in Nice, France, where he was responsible for European strategy.

HP attacks Korea

US COMPUTER and instruments firm Hewlett-Packard is stepping up its attack on Korea — the second fastest growing market in the Far East — by forming a local manufacturing and sales company. Samsung-Hewlett-Packard will be Samsung-Hewlett-Packard and 55% owned by the US firm and 45% by a local company, Samsung Electronics, which has sales of \$900 million. The partners say the deal puts them in a strong position to win a lot of the business expected when Korea hosts the 1988 Asian Games and 1988 Olympics, as hotels, shops and hospitals will be looking for computer systems.

Unix system deal

AT&T IS to give a shove to its System V of the Unix operating system through a deal with CPM author Digital Research. Digital hopes to build a library of applications for AT&T by the end of the year to run on several different microprocessors.

Northern Telecom, the great all-rounder in DDP and communications

Distributed Data Processing is our business; communications our strong-point.

When you choose a Northern Telecom DDP system you're also getting a telex, terminal, wordprocessor, mail-box — you name it. And you're getting closer to the automated office.

Compatibility is our watchword — from hardware, software and communications, to the way you use them. Our versatile range of systems allows you to build and develop a network to suit your needs and run your business more smoothly and efficiently.

The common operating systems gives you free movement of resources around the network. Thanks to our computer expertise and telecommunications know-how, you can communicate both inside and outside your organisation — without leaving your desk.

Northern Telecom is one of the world leaders in this field, with vast resources. We design and manufacture our equipment, and back it with software and support services close at hand throughout Europe. You can depend on our commitment to your growth.

So if you want a professional DDP system, and you feel the urge to communicate, start talking to us:

Northern Telecom Data Systems Ltd, Arden Grove, Harpenden, Herts AL5 4UD. Tel: (05827) 63161. Telex: 825334.

COLOUR GRAPHICS NOW AT MONOCHROME PRICES

£995*

The Intecolor 2405D colour graphics terminal really is the colourful alternative to monochrome. Check out these features:

- * VT52/100 compatible
- * Runs DEC utilities
- * 80x24 screen format
- * 8 colours
- * ANSI X3.64 communications protocol
- * Terminal-based vector graphics
- * Thin-line graphics
- * Two pages of display memory
- * Programmable function keys
- * Step-sculptured keyboard
- * 18-key numeric cluster
- * User-friendly set-up mode

Schools price war escalates

by Philip Hunter

APPLE and Commodore have stepped up competition in the UK education market by cutting the price of computers to schools by about 30%.

The move comes as secondary schools are having to pay more for computers with the end of government subsidies.

Secondary and primary schools can now buy an Apple IIe, processor, disc drive and monitor for under £800. The recommended retail price is £1,200.

Commodore is offering schools its 64 computer, with disc drive and the Logo education language, for £300, compared with recommended retail of £472. A monitor is extra, although a standard television set can be used.

Research Machines, a big UK supplier of computers to schools, is not cutting prices, but is offering free software to schools which buy its workstations and spend at least £2,500. The free software includes the word processing package Wordstar, the languages Pascal, Logo and Basic, and the Quest database enquiry language.

A basic 4802 standalone computer without the software, but including floppy disc drive and colour monitor, costs £385.

Sinclair Research is not cutting prices to schools either, but its Spectrum is still among the cheapest of the leading education micros. It costs £472, including a colour monitor.

Acorn, the other leading supplier of computers to schools, is also leaving its prices unchanged for the moment. Its BBC Model B machine costs £650, including colour monitor.

Primary schools can reclaim half the purchase price from the government for three UK-made machines - the Spectrum, BBC, and Research Machines' 4802.

A similar scheme for secondary schools ended in December.

While competition bids up in the UK schools market, the BBC has won its largest single US order for 170 of the Acorn-built machines. A secondary school in Phoenix, Arizona, chose the BBC computers in preference to offerings from Apple and Atari, both US companies.

Crusaders want more women

by Nuala Moran

A CAMPAIGN has been launched to bring more women engineers into UK industry, where only 1% of the country's professional engineers are women, compared to 9% in the US.

Opening the campaign, Sir Kenneth Corfield, chairman of STC, said: "Industry will be greatly helped if we stop ignoring the vast resources of talent which girls can supply to the engineering dimension."

Sir Kenneth was speaking as chairman of the Engineering Council, which is sponsoring Women Into Science and Technology Wise 84 jointly with the Equal Opportunities Commission. Education authorities, schools, colleges and 200 companies have been invited to take part.

The aim is to draw attention to career opportunities for women in engineering and other professions

requiring science qualifications, and to create an environment attractive to and supportive of women.

A report from the Engineering Industry Training Board released at the same time confirms the need for the Wise 84 campaign. It shows that over 90% of women employed in the engineering industry work in relatively unskilled jobs which are mostly under threat from new technology.

According to Sir Kenneth: "The chief executives of companies, personnel executives and management are key people in our attempts to change attitudes to girls. Opportunities are good in engineering for all young people - and girls must play a part. We need to persuade key management people to come round to our way of thinking."

The Engineering Council made a commitment to attract more women to the industry in September 1982.

Corfield says: "We are committed to encouraging more high quality people to enter engineering, and, as part of that campaign, are making special efforts to attract more women engineers."

"We need to change our attitudes towards girls and what they learn in school."

Baroness Platt of Writtle, chairman of the EOC and herself an engineer, said it should be compulsory for girls to study science subjects up to 16. "We have to get away from the idea that science, engineering and technology are the sole province of boys and men."

Secretary of State for Education and Science Sir Keith Joseph says a policy statement will be published later this year on science curricula in schools.

Events already planned as part of Wise 84 include residential courses and careers conventions.

Girl technician award

FRANCES DAGG was chosen last week as girl technician engineer of the year. The award is made to try and persuade more girls to take up a career in electrical and electronic engineering.

Dagg, 23, is a software development engineer at GBC Telecommunications in Coventry. Although her work involves all aspects of

computer programming she is mainly concerned with writing CAD programs for electronic design applications and helping hardware engineers to use them.

The award, £250 and an inscribed rose bowl, was presented by the chairman of the Equal Opportunities Commission, Baroness Platt of Writtle.

DAGG... Award winner.

Commodore names new man

by John Kavanagh

US electronics and microcomputer firm Commodore has named the head of a big industrial company as president and chief executive following the resignation of founder Jack Tramiel.

Tramiel resigned this month for personal reasons, but will stay as a consultant to the company.

The new man is Marshall Smith, an old associate of Commodore chairman Irving Gould. Smith is president of the US end of Thyssen-Bornemisza, one of Europe's biggest industrial companies, which makes nearly everything from bottles to car components.

The US operation had a turnover of \$1,000 million in 1982 - the same as Commodore last

year. Smith is also on the advisory board of merchant bank Manufacturers Hanover Trust.

Gould says Smith has an "excellent reputation" for manufacturing, finance, marketing and motivating people. The two have worked together since 1978, when Thyssen-Bornemisza bought Interpool, a company in which Gould was involved as chairman and shareholder.

Commodore needed a "professional executive" because of its size, says Tramiel. Sales have increased 13-fold in six years since the Pet microcomputer was launched.

US reports suggest some big shareholders were unhappy with Tramiel's autocratic management

But US industry watcher Rosen Research says Smith's main expertise is in manufacturing - an area where Commodore is already strong.

"He looks more of a friend of Irving Gould than someone sought by Commodore," the company says.

Smith's appointment follows a new trend among microcomputer firms to appoint professional managers from outside to top posts as sales rocket.

Last year John Scully moved from president of Pepsi Cola to head Apple, while financial troubleshooter Michael Faherty is considering the top job in Victor Technologies.

GOULD... "Excellent record."

Frightened analyst blames the planners

by John Riley

THE European computer industry faces a "frightening" future because there is not enough long-term planning, and too much is technology and not market driven.

That view, by industry analyst Al Dunn, head of the Yankee Group's European operations, arises from an in-depth study by the company for the European Commission on the future of office automation. The Commission is currently studying the report, which at least for now is for internal use only.

The report is based on a detailed 38-page questionnaire completed by 20 computer companies, combined with general research by the Yankee Group.

"European industry ought to be frightened," says Dunn. "It's got three years to sort itself out otherwise we might as well all paint ourselves blue."

Commenting that the Community is not stimulating marketing activity he says: "People buy solutions not technology, and you get solutions through marketing."

Among the recommendations are that there should be a common European communications networking strategy, along the lines of the Japanese industry department's strategy to the year 2010; and that standards committees procedures should be speeded up (see story on page 1).

Each government in Europe should have its own national standards harmonisation committee to make sure each country is in step and a "blueprint" is needed to help users understand their needs and help manufacturers cater for those needs.

The report is also critical of the fragmented European approach and identifies key areas in the office automation field where Europe could unite without conflict, including communications, advanced peripherals, local net-

NEWS ANALYSIS

Government sets standards rolling

Last week the government accepted most of the recommendations of a report that it should overhaul its telecomms. Donald Kennett reports

THE country's biggest telecommunications user, the government, is acting on behalf of its fellow users by leading the demand for standards.

Users have often been called on to play a greater part in standards, both by participants in standards committees, who recognise the danger of wandering away from reality, and by academics who have visions of compatible products from a variety of sources being turned into wondrous new services at minimal cost.

Users have been asked to help form the standards in the first place and to demand them in the products they buy. But they reply that they haven't the time to join in lengthy standards discussions aimed at producing results beyond their planning horizons; they haven't the muscle to influence manufacturers' design decisions; and they cannot afford to wait for the implementation of standard products.

One major effort aimed at breaking this deadlock has been made by the university and research council community, which for several years has had a team working on a rationalised approach to networking between autonomous establishments.

Some of the smaller suppliers have, working from the opposite end of the problem, seen standards as being to their advantage but, perceiving a lack of interest from users, have given a higher priority to other considerations, such as maintaining compatibility with previous products.

The Department of Trade and Industry has already tried to boost information technology standards by setting up the Information Technology Standards Unit to help develop them and the Focus committee to promote them.

It has also encouraged users to influence them by initiating the formation of the Information Technology Users' Standards Association.

But none of these is likely to have as powerful an effect as the £50 million investment programme for the government civil administrative telecommunications network that was announced earlier this month. Standards are said to be more necessary for the information technology revolution because, unlike the mechanical revolution, it depends on the close interworking of its parts.

Many of the "as yet unimagined services" on which the government tells us, full economic recovery and growth will be based, will only be viable if they are launched into an environment where large amounts of equipment have already been installed for a variety of other purposes. Users will not want to have to install new terminals or processors before they can make use of each new computing or communications service.

Many services will only be launched because the cost of running them is a marginal addition to the cost of existing ones - just as recorded information services have been added to a public telephone network primarily intended for two-way speech.

As far back as Sir Keith Joseph's days as Industry Secretary, the government advocated "enlightened procurement" as an important means of nudging industry in the right direction.

The currently planned nudge of encouragement towards the implementation of standards is not the

known well in advance. A lead will also be given by the pilot projects involving various types of advanced technology. Part of the objective of these projects will be to give a clearer indication of which standards will become the most relevant and how soon.

Standards to be required by next year include telephone sockets, push-button dual tone signalling, some modern standards and the X25 physical layer and link layer protocols for access from computers and terminal clusters to packet switched data networks.

Standards for local area network interfaces are also proposed as a requirement for next year, but

videotex and teletex standards are not thought to be required until the year after, despite the fact that videotex services started in 1978 (Prestel) and teletex services are to start this year.

The Treasury in its reply to the consultants' report says that individual government departments will continue to be responsible for many of their own purchases and that the CCTA (the government Central Computer and Telecommunications Agency) will continue to manage the main network and set guidelines for purchases.

But the report, and the Treasury's response to it, is likely to be a good guide to what actually happens.

But the report, and the Treasury's response to it, is likely to be a good guide to what actually happens.

The Treasury leads the way on standards.

FINANCIAL ACCOUNTING SYSTEMS? PACKAGED OR CUSTOMISED? OVER 500 COMPANIES HAVE TAKEN ADVANTAGE OF HOSKYN'S ACCOUNTING PRODUCTS... FOR PERSONAL COMPUTERS, MINIS AND MAINFRAMES...

Whatever the size of your business or your financial accounting needs, there will come a time when you need sound professional advice. That's when you should talk to Hoskyns.

For the past 20 years we've helped Britain's leading companies into the computer age. Many are users of Hoskyns UK-designed Financial Accounting Systems - packaged or customised - for Personal Computers, Minis and Mainframes.

Our continuing development brings you all the benefits of today's on-line interactive technology and ensures 'feature-rich' products with a wide range of options.

When you need a new system, a talk with Hoskyns should be your first option. We have the expert team to design, build and support the right system for your business.

It's what our business is all about. Call Alan Hicks now on 01-242 9561 for a fast and positive response. Or clip the coupon for further information. Hoskyns Group Limited, Africa House, 64-78 Kingsway, London WC2B 8BL.

CALL HOSKYN'S -THEY'VE GOT THE ANSWERS

1964-1984 hoskyns MAKING COMPUTERS WORK FOR YOU

HERE'S THE BASIC EVERYONE'S WRITING ABOUT...

XTAL BASIC 3 has been featured and acclaimed in more recent reviews than any other commercial British BASIC.

XTAL BASIC 3 provides a highly flexible language applicable to CPM and Z-80 systems software.

XTAL BASIC 3 comes with over 110 commands and functions which the user can easily extend - using his own vocabulary. And XTAL BASIC 3 offers many end-user benefits which are sure to enhance any system's appeal and help you win profit.

- * inbuilt onscreen editor for fast, easy access and modification to programs yet independent of VDU or terminal
- * permits variables of any length, multi-DIM arrays, string arrays, integer arrays for clarity and legibility
- * 32 error-trapping messages
- * memory extension features
- * compatibility with other BASICs
- * 12K/24K size (according to system)
- * handles all TAPE and DISK filing
- * British produced with full UK backup

SHOULDN'T YOU BE READING ABOUT IT?

Write, phone or call for a comprehensive information pack, including details of our highly competitive licence deal and FREE TRIAL OFFER to software houses and manufacturers.

Disc maker moves to Dublin and diversifies

by Nuala Moran

THE leading independent supplier of disc and tape storage systems for DEC and Data General units is diversifying into the Hewlett-Packard market.

Systems Industries of California made this announcement as it opened a 40,000 square foot factory in Dublin last week - its first move into European manufacturing.

The Hewlett-Packard market is to be exploited with the purchase of another Californian company, Qualex Technology, which manufactures tape products for HP3000 and 1000 computers.

All Systems Industries' range of products will be made at the Dublin factory. Harold Shatrick, president of the company, says that by August most shipments for Europe will go from Dublin.

It will also supply African markets and some parts of Canada. "The tax position is such that there are some cases where it is more economical to ship from Ireland to Toronto than California to Toronto," says Shatrick.

Service and repairs will also be done in Dublin. Some repairs are now carried out at the UK headquarters in Woking, but says Shatrick: "A number of repairs require

complex testing and we can't afford the equipment except in conjunction with a manufacturing facility."

"Previously parts had to be shipped back to the US for repairs so customers should see an improvement in this respect."

Irish people will be "trained in California for work in the factory, and in two years' time there will be 90 employees. Shatrick says he will also develop sources of supply in Germany, UK and France for components to complete integrated manufacturing in Europe.

The factory was set up with assistance from the Irish Development Agency. A first decision would have put the factory in Wokingham, Surrey, near the UK headquarters in Woking. But UK managing director David Scaman says that, although this would have been convenient, the financial inducements to go to Ireland swung the decision.

Shatrick says the break into the HP market could take a while to get going. HP supplies the majority of the market for storage products for its minis, whereas DEC only has around 50% of the into the HP market is only part of

Oric updates home machine to cut the quirks

by Philip Hunter

ORIC Products last week began full production of a successor to its Oric I home computer.

The new machine, called Atmos, comes with a new operating system, following six months' R&D in collaboration with some of Oric's third party software suppliers.

"We have greatly improved the ROM and removed all its quirks," says Paul Johnson, Oric director of R&D.

Atmos also has a machine code program to enable the user to override the error checking facility when loading programs from cassette. Oric claims to be first with this facility.

Oric has developed a 3in micro disc drive for the Atmos, based on the Hitachi drive and giving up to 200Kbytes storage at an extra cost of £200. The micro itself costs £170.

Oric says it delivered 160,000 micros in 1983 but will find it difficult to repeat this figure this year, because there are more competitors.

Wang offers aid to software houses

US word processor and mini-maker Wang is to give a helping hand to a few small applications software houses.

It is drawing up a list of recommended developers for specific markets, beginning with manufacturing. The three named in this category are Patel, Hill Price Davison and Peat Marwick Mitchell. Others are soon to be named for banking and insurance and these are likely to include Burford Management Services.

The idea is to formalise Wang's long-standing habit of calling in experts in vertical markets whenever a customer asks for a specialised program.

Industry marketing manager Gary Lowrey hopes that this approach may also assist in getting people to think of Wang as a data processing firm, as well as leader in word processing.

"Even the strongest IBM supporters can't see a clear office automation strategy there," says Lowrey.

In the longer-term, Wang is also

LOWREY... "Even the strongest IBM supporters can't see a clear office automation strategy there."

on the lookout for software houses in law, transport, energy and construction.

"We don't think it would make any sense for us to establish an in-house software group to tackle these things," says Lowrey, "so we've picked out mainly those

houses that we've worked with in the past, and will recommend them to our customers."

Pactel has worked with Wang on some projects for Ford; Burford set up a purchasing system for Mobil which it is now marketing. After the recommended list is

finalised in June, Lowrey wants to work on setting up deals with some larger software houses and on a customer cross-licensing programme. This would allow British software houses to sell programs developed for Wang abroad.

ICL leads attack on the villains

by John Kavanagh

LEADING UK computing firms and government agencies are aiming to develop a £50 device which could become a world standard solution to the problem of mini and micro software piracy.

The government's British Technology Group and 10 companies led by ICL are working with the National Physical Laboratory to develop a tamper-proof box of electronics which will decipher and run programs sold on disc or tape in encrypted form. A single box would be able to run all software following the encryption rules.

A preliminary meeting was held last autumn and at a second meeting this month six firms put up £5,000 each and letters of intent were received from several others.

The group is looking for 10 member companies to pay half the £100,000 one-year budget for development of a prototype. The British Technology Group and the National Physical Laboratory are putting up the rest.

"The members are blue-chip companies, including some big software firms," says Dr Brian Wichmann, who is co-ordinating the work from the National Physical Laboratory.

Wichmann says the group knows of no similar collaborative work anywhere. The group is keeping the US computing services industry and the European Commission in touch with its progress.

"Our aim is to help the UK industry - but it's essential that our work is accepted internationally so that exports of UK software are not impaired by the need to have the device," Wichmann says.

He points to studies which estimate that between £30 million and £50 million a year is being lost through software piracy in the UK alone.

The £5,000 membership fee has kept out smaller software firms - but the results will be publicly available so large numbers of suppliers can use the new solution.

The group is now completing a study of existing software protection methods to ensure there are no other suitable devices or techniques already available.

Dr David Everett, managing director of Open Computer Security, which will build the prototype, says all other methods are "a joke".

"We must press ahead as quickly as possible, otherwise a *de facto* standard such as a silly dongle could appear because people are so desperate for some form of protection," he says.

A dongle is a hardware device provided with the software. The program only runs if it is there. But pirates can delete the checking routine or add one which simulates the dongle.

Other systems use encrypted program code - but run the deciphered version in the computer's memory, where it can be copied.

SOFTWARE FILE

Anti-piracy costs threaten products

MANY good software products are not reaching the market because of the high cost of protecting them against piracy, according to an industry pundit speaking at a British Computer Society meeting last week.

Jon Baldachin, former consultant to the BBC Computer Programme, is head of software house Little Genius and has spent the last four years devising an answer to the threat of bit-copyers.

Baldachin said that hardware solutions such as the dongle were only useful for products sold at over £50 each. For cheaper programs, they added prohibitively to the cost of production.

As software prices kept falling, more and more attention was being given to techniques like non-standard disc formats. But good bit-copyers like Locksmith had successfully overcome many of the problems of such clever formatting.

Because of the cost of dongles,

firms like Visicalc had decided to go into non-standard disc formatting in 1980. Since then, there had been a continuous war between program developers and pirates over track/sector recognition. Locksmith, he said, was powerful and sophisticated at recognising these patterns, and there was no legal recourse against the people who sold it.

But he said there were limits to the mechanical intelligence that could be built into a bit-copyer. "So far we think we're ahead of the game," he said.

The piracy problem is more severe in the US because the UK had more mature distribution channels. Big distributors like Boots or Debenhams would drop a product as soon as there was any hint of litigation.

But the US is about a year behind us in this respect and still depends heavily on mail order, which is vulnerable to pirates, he said.

Micro links delayed

BIG software firms are having trouble living up to their promise of getting mainframes talking to micros.

Cullinet, which promised delivery of its IDMS/R in the fourth quarter of last year, is now talking of installing it here in test versions by the end of January and putting it on general sale by the end of June.

Informatics and Visicorp, which are combining to provide two new products called Answer/DB and Visi/Answer, are also behind schedule. They also promised their solution for the fourth quarter, but now say it is due for release this week. They say it has already been made available in the US, though there are no buyers as yet.

McCormack and Dodge claims it is still on target to release its millennium product in the spring.

Now there is a new challenger in the market, Martin Marietta,

owner of Hoskyns and Mathematica. Its IT software has been put together by Martin Marietta Data Systems in New Jersey from research which was being undertaken by Mathematica before the \$30 million takeover last summer.

Marietta vice-president Norm Agin in London recently said they already had several US users including San Diego Gas and Electric.

The system is to be extended over the next few months with connections between Mathematica's Ramis-11 database and the IBM-PC.

Principal distributor to the corporations will be Hoskyns, but Marietta is looking for other channels to reach the smaller organisations.

Agin claimed there was no threat from IBM following that company's announcement that it was to develop Comshare's Wizard decision support system.

TERRY and CAROL POOLE... Moving to Salisbury.

Coal money warms Tabs into management shake-up

MICRO accounting software house Tabs has been given a cash injection of over £500,000 from the National Coal Board pension fund and bankers Hambros.

The equity finance has enabled the firm to shake up its management team and bring its staff from offices at Andover and Ringwood under a single roof in Salisbury.

Two directors, Rab Kilpatrick and Chris Rogers, have left and been replaced by four new ones. The recruits are former Martel managing director Mike Lunch, former Tabs dealer Richard Rance, former Honeywell man David Hayward and Nick Griffin from accountants Peat, Marwick, Mitchell.

Tabs managing director Terry Poole says he is also looking for eight more high-calibre pro-

grammers to add to his existing staff of 50.

Kilpatrick left to return to Quest Automation, while Chris Rogers has gone to the US to represent Tabs' interests.

The investment is intended to back development of its multi-user product range Superlats and expansion of its franchise chain of business centres.

Tabs broke new ground for the industry by being first to sell its goods in colour supplements and was among the first to use phone selling. In 1982, Hambros took a 15% stake in Tabs for £150,000.

Poole says that the decision to move to Salisbury is based largely on the cheapness of premises there. It would cost them about £50,000 a year less than going to Newbury, he says.

AGIN... "No threat from IBM."

GEC plans for tools subsidiary

GEC's new software tools subsidiary will be oriented towards developing Ada tools on the DEC Vax-11/780 and Unix tools on the new GEC Series 63 hardware.

Both elements could be underpinned by public money, through the Alvey Programme or other government initiatives. The company, based in London's Covent Garden, is the brainchild of GEC directors Laurence Clarke - now seconded to the Alvey directorate - and Derek Roberts, who will be its chairman.

The aim is to recruit around 50 top-level staff by April 1985 and to sell the tools both to other GEC wings and on the open international market. Roberts will report through

GEC director Jack Pateman to group chairman Lord Westminster. But he will be anxious to convince programmers that his is really a small, autonomous outfit, not just a part of a huge conglomerate. Technical director Tony Callaway says that being able to attract the right recruits will be the key factor in whether they succeed or not.

The number of skilled Ada practitioners in the UK runs to only a few hundred and for Unix the figure is still only a few thousands. Callaway says he will not be trying to poach any of the existing 3,000 software engineers at GEC. They will need their bosses' agreement to move to GEC Software.

CALLAWAY... Attracting the right recruits will be the key factor.

Everything a manager needs to know about UNIX™

but didn't know who to ask.

Every manager concerned with computers needs to know about UNIX. After all, it's no longer a secret that UNIX is fast becoming the standard operating system of the future for the new breed of multi-user superminis.

That's why we've designed a special one-day course in UNIX for the busy but inquisitive manager. The course:

- ☐ Looks at the development of UNIX and its various lookalikes and implementations.
- ☐ Explains UNIX's approach to computing covering processes, pipes and file structure.
- ☐ Considers the development of 16 and 32 bit microprocessors and examines the factors that affect the performance of UNIX systems.

- ☐ Reviews the different systems available that run UNIX.
- ☐ Compares UNIX with other operating systems.
- ☐ Introduces the languages and applications available to run under UNIX.
- ☐ Provides details of the communications and networking aspects of the system.

We also run hands-on UNIX and C language courses for the programmer and systems engineer. (Tick coupon for details).

Remember, no one else in the UK has as much experience with UNIX systems as Bleasdale. We developed the first UNIX computer in Europe and have stayed at the forefront

ever since, working with many leading software houses in developing both scientific and business applications.

To book your course or find out more details, please complete the coupon or telephone 01-828 6661.

But don't delay too long. UNIX's time has come, and demand is likely to be heavy for the limited number of places.

™UNIX is a trade mark of Bell Laboratories.

I would like to attend the following course in 1984.

\$50 start has earned Hwang a fortune

SUCCESS was slow coming to Philip Hwang, 47-year-old founder and chairman of Televideo Systems. But it came big. In 1984 when he arrived in the US from South Korea, he had \$50 in his wallet. Eleven years later he had amassed the modest personal fortune of \$9,000, which he used to set up Televideo in partnership with two other engineers.

The venture splattered along unceremoniously for a couple of years, and the two other co-founders pulled out, fed-up with being forever broke left. Hwang struck out, and look where it has got him.

At the latest count he is worth \$628 million, and is listed as one of the 400 richest men in the US. Yet for his first 13 years in the US, plus his 10 years in South Korea as a North Korean expatriate, he was a financial also-ran.

Hwang's first move on arrival in the US was to enrol for a mathematics degree at Wayne State University in Detroit. Then on to Harvard Business School in the hope of learning how to make money.

With no rich parents to keep his pockets full, he had to work as a waiter in restaurants at night to pay his course fees and buy his daily bread.

After this, he worked at Burroughs and NCR as a hardware engineer, and managed to put aside \$9,000 to meet his dream of

starting his own company, which in 1975 he did.

But for several years, Televideo looked like being just another small time electronics company. So how did he make it?

Hwang makes it sound as simple as sucking eggs, and a great deal more rewarding. In 1979, Televideo started selling display terminals more cheaply than most other companies, just when demand for them was rocketing. Hwang went home to Korea to negotiate cheap

by Philip Hunter

manufacturing deals, which enabled him to undercut much of the opposition.

But he is quite unsentimental about his country, and has now removed much of the manufacturing to Sunnyvale, California, keeping the Koreans on only for labour intensive parts of the assembly.

"All high technology engineering and quality control is now in Sunnyvale," Hwang assures us. And the company is also planning to manufacture in Puerto Rico. The man emanates a disarming patience, giving the expression that what cannot be done today, can quite happily be left until the day after tomorrow.

This attitude certainly helped to see him through the hard years of 1975 and 1976, when he says he never had a single pay cheque and

lived off his wife's salary.

Hwang also attributes his success in part to a severe reluctance to borrow money, so he is a glowing exponent of the spirit of Reaganomics, if not to the practice.

It was not until 1982, that he borrowed any money at all for his business, and then only a \$5 million debenture loan, just loose change in comparison with his company's turnover, which was now colossal.

Hwang says he is also reluctant to part with what he has got, in this case a 70% shareholding in Televideo. For several years, he owned almost all of the company, but has now shared 10% among his 1,000 employees, and in March last year went public to raise \$125 million.

More money was raised in November last year in a rights issue, but Hwang still has his 70%.

Televideo's move from video games into TV monitors in 1978 launched the explosive growth, but it has been personal computers that have sustained it over the last two years.

The company's computer division, started in 1981, now accounts for over half the overall turnover.

Now, just 30 years after Hwang escaped from North to South Korea during the Korean war, he has come to the UK to initiate what he considers a vital step in making his company a major force in Europe.

This is to appoint Thorn EMI as the exclusive UK and Eire dealer.

"Until now we have never given anyone exclusive territory like this," Hwang says. Hwang believes in local competition between distributors, but not being one to let his prejudices overcome his business nose, he decided to drop the three existing UK distributors, Midletron, Encotel and Colt Computers, from the computer side of Televideo's operation. They will be retained, however, for terminal distribution.

Hwang says that he wanted to have a name bigger in the UK than Televideo itself behind the product, and that Thorn EMI was an ideal choice since it also had plenty to offer on software. But another reason is almost certainly Televideo's poor market penetration in the UK, compared with the great inroads it has made into American personal computing market.

Not that everyone attributes this poor performance in the UK market to the three former distributors. BCU Computers, formerly a dealer selling Televideo's TS range of desk top micros for Midletron, blames Televideo itself.

"The main problem is that its operating system is not up-to-date," says a spokesman.

Now, however, Televideo has a new desk top model due for release in the UK next month, the TS1605. This offers full IBM-PC-

HWANG... From Korean rags to riches.

DOS compatibility at £2,600 a system.

Hwang places great store on this new computer's PC-DOS compatibility, and admits that previous models which only ran the more general MS-DOS programs were not truly IBM-compatible. "The 1605 is almost 100% IBM-compatible," he claims.

Hwang's vision of Televideo as the complete systems company should be fulfilled during 1984, he thinks. The company now has an extensive range of business applications software, and also makes printers as well as terminals and displays. Turnover for 1983 at least \$350 million, Hwang asserts.

This co-operation may set standards

THE threat from US and Japanese competition in information technology has been brought home increasingly as major European companies have started to form ties with US and Japanese firms in preference to each other.

Protectionism is being discredited increasingly in general markets. Even in telecommunications, one of its last bastions, it is coming under fire.

Open markets, it is said, benefit users by bringing them the widest possible choice of products (so long as the country can afford the imports), and manufacturers by bringing them the stimulus of competition (so long as it doesn't put them out of business).

The problem is to balance the benefits and the dangers from such a shift in policy. Manufacturers must enlarge their markets as users widen their choices. Companies must be prepared for future opportunities, but not killed off by removing their current ones. Markets must be opened multilaterally, partners must prove to be fair-minded and trustworthy. Opportunities must be made real and not just apparent.

Part of the solution must come from manufacturers. This month has seen them told by a US consultancy, the Yankee Group, in an internal report to the European Commission, that their long-term planning and their marketing efforts are inadequate.

Part of the solution must come from government. This month has seen the US accused of trying to control exports of high technology, and the UK government challenged to do something about it.

Some solutions must evolve in a wider arena. This month has seen a new challenge to the government's Telecommunications Bill arise from the opposite side of the fence from the previous one: fear of too little competition is voiced to match the previous fear of too much.

Perhaps the most positive step is the one taken by CEPT on European standards. Standards seem to be a fairly safe area for co-operation. It was not always so. Standards have seen some fierce rivalries. But there are less likely to be such rivalries now, and this is one area in which the participants will feel little need to police each other.

With any luck, as well as bringing benefits directly, this co-operation on standards will set the tone for further co-operative efforts.

Save manufacturing

THERE is a hint that there is some debate within the Department of Trade and Industry over whether service industries - and one is particularly thinking of those related to the new technologies - will really be the salvation of the UK economy.

Information Technology Minister Kenneth Baker, speaking at the London Business School last week, repeated the government's view that most new jobs over the next 25 years would be created in service industries.

There seems to be some disagreement with a speech made earlier this month by industry under-secretary John Butcher, who said that information technology would not change working patterns, would not herald in the age of leisure, and that it was "foolish and misguided" to say so.

To be fair, the "disagreement" between Butcher and Baker may be more imagined than real. And also to be fair, Baker did say in his remarks that he could not envisage the UK economy without a large element of manufacturing employment.

The point is, it is all too easy to let the words "information technology" and "services industry" slide off one's lips with the promise that a new day is coming. Services industries will create new jobs, but only if there is a stable manufacturing industry as a base.

If there is no real disagreement between Butcher and Baker, perhaps there should be. Perhaps it is time for a much wider debate in the DoTI, and government as a whole.

1984 and all that...

THIS week's example of the strange things people say about computers was sent in by J. Carr, of Reading, Berks, who wins £5. On the last few lists, the weather in these two Californian cities (Los Angeles and San Francisco) has been given as "sunny".

At 4 am (local time) a useful met officer admitted: "These observations are complicated by computer and it can't differentiate between night and day. And our programmers can't do anything about it."

LETTERS

Ludicrous laws victimise technology companies

BRIAN ASH of Arrow Computer Systems ("Arrow boss urges faster cashflow," *Computer Weekly*, January 5) raises some interesting points which affect the whole small business scene here.

His comments about small company failures due to under-capitalisation are right on the ball. But small high technology companies are generally under-capitalised for two reasons.

On the one hand, the founders have very little idea of how to go about developing a company or raising the money - or even how much money they are going to need. On the other hand the investment community, with one or two honourable exceptions, is

not geared to funding small fast-growing businesses and knows nothing of the technology involved.

Even where they use technical advisers they usually come from the "big is beautiful" brigade. How can an ex-IBM mainframe salesman really be expected to give a view on the needs of a microsoftware house?

We have terrible trouble persuading people who come to us for help in finding finance that they need to raise more money than they ever dreamed was necessary and that they will need more every couple of years. It is much harder to make them understand that investors actually want a sensible amount of equity for putting the money in.

Ash raises another important point on credit control. Most small firms have neither the knowledge nor the time to really control their debtors, but the laxness of our laws on debt make everyone's job the harder. It is so easy to be a crook that the wonder is more are not! This is why factoring and debt insurance is so expensive unless you have a blue chip customer list.

Because of our ludicrous company laws people can string out a debt until it is worthless, issuing cheques that will never be honoured, getting the courts to allow extended payment, taking everyone for a ride.

The smaller company falls victim because it has not the resources to chase a bad debt to the limit. If the law were tight and the penalty severe then the credit control industry would find it economic to service small companies.

Sadly, as Ash so rightly says, this government sees a small company as one which all our western competitors class as medium-sized. Truly small business does not get a look in.

Perhaps too much of the party funds come from those rather larger companies that do enjoy the benefits aimed at small business.

It was the real Norman Tebbit - Editor.

Market leadership claim for MICA

IAN TRAIL, (*Computer Weekly*, January 5) takes us to task for our claim that MICA - Microdata's Major Incident Computer Application - is two years ahead of any comparable product.

MICA is a lot more than just a word or text retrieval system. It is a fully featured specialist package developed with the active involvement of serving officers in the West Yorkshire Metropolitan Police Force whose experience of

major crime investigation is second to none. It has received the approval of the Association of Chief Police Officers, and meets all Home Office standards so far published.

Technically our features include compatibility with manual incident room standardised administrative procedures as well as with Autoindex, plus an option of communications links to various other manufacturers products.

Anyone who wishes to challenge our market leadership must show an equivalent level of acceptance as well as match us feature for feature. That's what we would call a "comparable product" and that's why I think our estimate is a perfectly reasonable one.

BEN GARNER
Communications Manager
Microdata Information Systems
Hemel Hempstead
Herts.

The software behind our software

As the pace of development in computer technology quickens, it's all too easy to be blinded by glib claims and slick talk when looking for an effective, efficient computerised human resource management system.

So it may be reassuring to hear that Peterborough Software's Unipersonnel, Unipay and Unipension packages rely very strongly on the most sophisticated, flexible and productive software available.

This unique feature? People. At Peterborough Software we don't just put our faith in technical expertise, innovation and considerable experience in producing management software.

Sales. We won't sell you products you don't need.

That our customers get just what they need, we back all of that with the right people.

Take the first of the people you're likely to meet from Peterborough Software, a member of the sales team. Rather than setting out to sell you something, come what may, you'll find that our sales people will be more interested in discovering your problems, and ascertaining whether our software packages will in fact do the job for you.

Generally, we find that Unipersonnel, Unipay and Unipension more than meet most human resource management needs. Because our policy of continuous, innovative development of management software for IBM mainframe users ensures that our products keep us - and our customers - one step ahead.

Which of course relies again on people - our team of systems analysts, programmers and engineers.

If you find yourself taking a serious interest in our range of software (which we're confident you will), we'll invite you to a Product Workshop.

Where you'll get the chance to roll your

Product Workshops. Explore our products for yourself.

Development. Innovative, management orientated new product policy.

Education. We'll teach you how to get the most from our products.

Even in the best of all possible worlds, sometimes things will go wrong. Which is why our Customer Support Team is on call to you.

If you have a problem, you call us. And our people will help you solve it. Human resource management is all about people. So doesn't it make sense that the system you use bases its strength on people too?

Unipersonnel, Unipay and Unipension. Only from the Peterborough Software people.

To find out more, complete the coupon or telephone Jane Lewis on (0733) 41010.

sleeves up, and find out for yourself what you'll get from Unipersonnel, Unipay and Unipension.

And have your questions answered and problems resolved by friendly, helpful specialists.

Another group of Peterborough Software people you'll find invaluable is our Education Department. Their function is to ensure that you, your staff and your user department colleagues know what you need at the appropriate levels to make best use of Unipersonnel, Unipay and Unipension.

Once you've installed any one of our products (and again, we're confident that you're likely to), there's yet another team of people available to help you get the most out of your system.

Education. We'll teach you how to get the most from our products.

Even in the best of all possible worlds, sometimes things will go wrong. Which is why our Customer Support Team is on call to you.

If you have a problem, you call us. And our people will help you solve it. Human resource management is all about people. So doesn't it make sense that the system you use bases its strength on people too?

IBM's blessing is not final say

David Addison is president of Master Systems International.

A FASCINATING thing about this industry is that if IBM doesn't bless a particular technology, it doesn't merit serious attention.

The big blue seal of approval has more to do with its own marketing needs than the frontiers of research. Yet the most sophisticated of users shy away from viable developments unless IBM advises them that this is the direction they ought to take.

Take the long-term need to solve the problem of online storage demand. This is estimated to be growing at an annual rate of up to 70%. If things keep up as they are - just imagine the implications of millions of corporate personal computers linked to mainframes - most major users face data management problems on a massive scale.

The IBM solution so far is more and more disc drives. And why not, when you are selling 3380s at the rate of \$1 billion a year in Europe, and your growth rate projections could be as high as 40-50% per annum?

Why look to new frontiers when you have a lot of products to sell and the market appears to have very little limit?

This inclines me to believe that any announcement on double density disc drives will be later rather than sooner. Some industry pundits have talked about the possibility of news of this development in the first quarter of 84. The smart money is on the fourth quarter of this year after IBM has had an opportunity to unload some highly profitable inventory.

David Addison

DOWNTIME

An education at Rita

AMONG the glittering elite at this year's Rita Awards dinner at the Grand Hotel in Birmingham was a man who had twice been in jail, and who admitted to be the perpetrator of a long running fraud involving the Inland Revenue.

Libel laws, of course, prevent me from naming the individual, but I can reveal that he was at one of the three top tables at the Rita dinner, and only one table away from Alvey supreme Brian Oakley.

The man in question works at one of our leading universities. He admitted to me over our post prandial

dial drinks that even as a youth he had a banking career for crime: he always carried a thief's housebreaking tool kit with him, not to use, but to tempt the police to pick him up. "They did once, and then got bored with me."

His fraud against the taxman is more subtle. Every now and again he sends a random cheque to the tax office for a small amount, say £10.23, or £6.40. The strategy so confuses the tax people, and their computer, that he has avoided paying a tax bill for many years.

"Most people in data processing are dishonest by nature," he confessed.

Reversing your chips

THERE is a nice distinction between official second sources of semiconductor products, which are given the specifications to copy quite legally and openly, and unofficial second sources, which develop the product by making use of the process known by the

euphemism "reverse engineering".

Intel has accused Nippon Electric Company of Japan of reverse engineering its 8086 16-bit processor family for many moons now, and has at last reached a settlement.

What's in a name?

WHAT's in a name? We were impressed by the apparent coincidence that one Peter Irvine is a director of the Irvine Development Corporation. Perhaps there are

Telfords and Washingtons, Kilbrides and Cwmbran, even Welshes in the Development Agency. Can we presume there's a Chad?

From Seattle, high-techless

THERE I was, hanging around Seattle airport homeward-bound from the Californian sun, when a customs man took me aside. I was ready for the usual litany of money and drugs as he rifled through my baggage, but not for searching questions as to whether I had any high technology about my person.

"Hardware, software, chips, documentation - that sort of thing," he said.

The galling thing was that I didn't have anything worthwhile. The highest tech I had was my dying digital watch, and he didn't seem interested in that.

I know the Americans are ever-so-anxious to keep their high technology to themselves, but I can't help feeling that random checks on airline passengers flying east from the US is taking it all too far.

On the slippery slope

DO bleeps - you know, those damn gadgets that call doctors from the pub to the operating theatre - tend to freeze up?

I only ask, because the other day a pal of mine wanted a word with Lord Orr-Ewing, who, it being January, was of course on the ski slopes of Switzerland.

Should have been no bother, he thought, to get him dragged to a phone for a chat - what with him being a director of one of the Air Call companies. Not a bit of it. My friend had to wait till it got dark and His Lordship came in.

Maybe he switched it off to keep the media at bay.

10 YEARS AGO

FROM COMPUTER WEEKLY OF JANUARY 24, 1974: Selcon resigned from the Software Houses Association, leaving the organisation with problems... GEC won a £14,000 order from the British Aircraft Corporation for its 2050 remote job-entry terminal.

PEOPLE

■ Bill Evans is now heading operations for CPI, part of the Jenrick group of staff recruitment companies, dealing with national and international organisations. Evans previously spent over seven years in recruitment of high-level computer personnel with another leading consultancy.

■ As part of its drive to increase penetration of UK information systems markets, Ericsson Information Systems has formed a market communications unit. Head of the new unit is Sheela Rao (below), who recently joined the company as marketing communications manager. Rao assumes total responsibility for the co-ordination, planning and management of all promotional activities, including advertising, press and public relations and internal communications.

■ Rair has appointed Mike Langley (above) as finance director. He will be responsible for the financial management of the UK company, as well as Rair's subsidiaries in France and Germany, and the USA. Langley was formerly European controller of the Boston-based Reece corporation, where he was responsible for finance and administration for the Corporation's European subsidiaries.

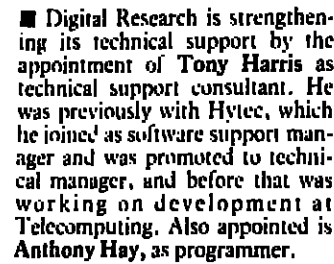

■ The board of NMW Computers announces that Nigel F. Banister, marketing director since 1976, is now managing director following the retirement from active business of Brian D. Johnson, who has been managing director of NMW Computers since the company was founded in 1972.

■ Ray Gent (above) has been appointed director, manufacturing operations, of Beckman Instruments. He was previously plant manager at Beckman's Glenrothes manufacturing operation.

■ Chris Pullen has been appointed marketing executive by ABS Computers. Prior to joining ABS, he spent two years as a management trainee with Trafalgar House, ABS parent company.

■ Geac Computers Europe announces the appointment of Paul Field as international banking product group manager. He was sales manager at Tymshare, with responsibility for the international banking system.

■ Digital Research is strengthening its technical support by the appointment of Tony Harris as technical support consultant. He was previously with Hytec, which he joined as software support manager and was promoted to technical manager, and before that was working on development at Telecomputing. Also appointed is Anthony Hay, as programmer.

Rank Xerox (UK) has signed a contract with the British Amateur Athletic Board (BAAB) for Steve Cram (right), BBC Television's Sports Personality of the Year for 1983, to carry out a series of charitable and social activities for the company.

During 1984 and the early part of 1985, Cram will make a number of personal appearances at a variety of functions, including several Rank Xerox sponsored 10 Series 10 kilometre road races and other major Rank Xerox athletics meetings.

In addition, he will visit schools for handicapped children and be involved in coaching at regional seminars for up and coming young athletes.

Rank Xerox has devised the programme with the full co-operation of the BAAB to ensure Cram's schedule is not interrupted as he builds up to the Olympic Games in Los Angeles.

David Harris (left), marketing director of Rank Xerox (UK), says: "We are delighted to have been able to secure the services of Steve Cram to help us in our support for British athletics, begun last year with the introduction of the Rank Xerox 10 Series races."

"Cram's presence will be part of the overall athletics package involving Rank Xerox in a further series of events planned for 1984 and 1985."

■ Bytec Gulfstream has made three appointments to the team responsible for marketing the Hyperion 16-bit IBM-PC compatible portable business computer throughout Europe. Trevor Duplock becomes European marketing manager; David Greig, European technical manager, and John Woolmore, European financial controller. Duplock was most recently general manager of Abacus Electronics; Greig was previously technical director of an Amsterdam-based company that designed, produced and marketed peripherals and disc-based microsystems throughout Europe; and Woolmore has spent over 10 years in senior financial positions with companies in the computer and electronics industries, including Comma and Abacus.

■ The Peachtree support team has been expanded with the appointment of Peter Kroeger as support consultant with responsibility for product management of PBMS, the Peachtree Business Management System. He was previously partner with R. Kerr & Co, chartered accountants and auditors.

Merlin

British Telecom Business Systems

The Heavy-Traffic Controller

Conventional networking systems can be complex and frequently inefficient in their utilisation of both hardware and telephone lines. Sometimes errors creep into your system, and occasionally a communications link fails. But with the advent of British Telecom's Merlin Datelmux 5500, those problems become a thing of the past. The 5500 is the heavy-weight among statistical multiplexers. We can even optimise your network configuration for you.

From 4 to 240 Channels

The 5500 can service up to 240 channels, either from point-to-point links or from up to 15 composite links to other Datelmux sites. Up to three 64k/bits links, in addition to a single kilostream link Datelmux for up to 56 channels. Not only this, you get integral error protection for your data and comprehensive network management.

Central site control

However many terminals you have, the 5500 will route each one into its relevant computer port.

Port contention

If you have more terminals than you have computer ports, the 5500's Port Contention option will form them into an orderly queue with a clear indication of the order of preference.

Nodal capability

The alternate routing facility finds a way to get your data through. If the link between one Datelmux and another goes down, data will be re-routed automatically via a third one. You get maximum networking flexibility with economic onward linking and a consequent saving on line costs.

Local data switching

You can use Datelmux 5500 as a local area network, switching terminals and computer ports within a building, and still have gateways to the outside world.

THE MERLIN
DATELMUX
5000
SERIES
ALSO INCLUDES:

Datelmux 5101/24/8 channel asynchronous.
Datelmux 5111/24/8 channel asynchronous interworking with Datelmux 5300/5500 networking products.
Datelmux 5121 4 channel synchronous time division multiplexer.
Datelmux 5300 32 channel point-to-point multiplexer with optional onward linking at node sites.

Microdata 1000

Brings Reality to the desk top workstation

The new M1000 workstation from Microdata has a unique feature which makes it stand above the competition: the Reality operating system.

World market leader in implementing Pick-based operating systems on the established Reality and Sequoia (Series 9000) mini-computer ranges, Microdata now puts the same ease of use onto the desk top. Total compatibility from range to range enables applications to be developed and run on an M1000 workstation, on linked M1000 workstations, on a Reality system or on the largest of multi-site Sequoia networks.

Find out today the many positive benefits which a Microdata M1000 puts at the end-user's fingertips. Call Hemel Hempstead (0442) 61266 now and ask for the One Thousand Hot Line.

And then don't settle for less.

Microdata Information Systems Limited
Maylands House, Maylands Avenue,
Hemel Hempstead, Herts. HP2 4RL
Tel: (0442) 61266. Telex: 825868.
Microdata is a McDonnell Douglas company.

Users want better support

Gripes and good points are highlighted by the 1983 user satisfaction survey. John Riley looks at the results

LAST year's lullards about responding to the national Computer Weekly/Datapro user satisfaction survey have pulled their socks up this year and mainframe and minicomputer users remain generally satisfied with their machines. Despite that, the general level of technical support supplied by manufacturers is still weak.

Those are among the broad findings of the 1983 survey, the largest ever, which is based on 2,064 user responses representing a total of 3,390 systems. There were 819 mainframe and 1,245 minicomputer user responses more than double last year's response (Figure 1).

In the mainframe section this year, the IBM plug compatible manufacturers, Amdahl and National Advanced Systems (NAS), get the best ratings by their users for all-round performance. However, the sample for these companies is low, so perhaps more impressive is IBM's high rating based on a sample of nearly 400.

Sperry and NCR, which came bottom last year in the mainframe user ratings, get a sharply increased vote of confidence from their users this year, judging by the numbers of users prepared to recommend their systems and the satisfaction index (Figure 4).

There is a sharp drop in the number of Digital Equipment users who would recommend their systems, but that may be the result of the low sample, and of DEC's decision last May to drop DEC-System 10 and 20 development.

Top runners in the minicomputer section are Hewlett-Packard, DEC and Perkin-Elmer, in that order, with a 3.2 satisfaction rating and best recommendations from their users. The 216 IBM minicomputer users who responded put the company fourth.

NCR gets the wooden spoon in the minicomputer section, with a four-point drop in user satisfaction to 2.5 from 2.9 last year. Data General and Datapoint are all down on last year's ratings and

COMPUTER WEEKLY sent 10,000 questionnaires to a random sample of subscribers last September to gather information for the 1983 Computer Weekly/Datapro user satisfaction survey — the largest so far.

The aim of our survey, now in its fourth year, was to gather pertinent information about each system and its operation, such as type of industry, principal applications, source of applications programs, primary programming language used and future acquisition plans.

The real core of the survey, however, is the section where users are asked to indicate the advantages and disadvantages of their systems; to rate various aspects of their systems, their software and support; to evaluate how much, if at all, the systems lived up to expectations; and to make recommendations to other users.

Responses may have been coloured by individual variations in expectations, different applications, the operations environment, and the quality of service and support provided by the vendor's branch office.

Moreover, a range of systems is represented, both old and new, and performance of older machines can pull down overall satisfaction ratings with a manufacturer.

A total of 2,270 of the 10,000 questionnaires were returned, initially screened and forwarded to Datapro for further processing. A total of 2,064 were accepted. These represented a total of 3,390

systems, because many of the respondents have multiple systems. In cases of multiple systems, each model was rated on a separate copy of the questionnaire.

The results are given either in straight percentages of users' responses to certain questions, or by reference to a satisfaction index.

The satisfaction index was calculated by asking users to grade aspects of their systems into one of four categories, which were then weighted. "Excellent" was weighted as four; "good" as three; "fair" as two; and "poor" as one. From this, an average mark (between 1.0 and 4.0) was obtained.

The questions are the same as those asked in previous years. This provides a sound base for comparison with opinions in earlier surveys.

The overall response was more than double that of last year's survey, which had 954 user responses, representing 1,273 systems. The most comprehensively covered manufacturers were IBM and ICL in both the mainframe and minicomputer sections, and Digital Equipment in the minicomputer section.

Responses from users of other manufacturers' equipment were thinner on the ground, and figures are only presented here when there is a sample of over 10 mainframe user responses and over 20 minicomputer user responses.

The full survey report, to be published by Datapro at the end of January, provides a considerably more detailed breakdown of the results.

lary high ratings are Amdahl's 470/V6 (with a 3.8 rating), IBM's 4331 (3.7) and 4341 (3.6), and Honeywell's Level 64 and 66 machines (3.6). Amdahl, NAS and CTL score highest in overall rating, but the sample is small. ICL and NCR have ratings of 2.9.

The reliability of ICL's 2970 and 2976 mainframes pull its average down. However, although reliability of mainframes is generally high, that of minicomputer manufacturers' peripherals lags, averaging 2.9 overall.

IBM's 3031 peripherals rate highest with 3.4, and peripherals for its other machines are slightly better than average. In this category ICL is slightly lower than average.

Last year's general finding about the quality of technical support — that it falls below the quality of other aspects — is repeated this year. Mainframe manufacturers which are consistently a couple of points below average on documentation, user education and troubleshooting are Burroughs, ICL and Sperry.

Burroughs, however, has improved its technical support since last year to judge from its ratings: last year it was given an all-round average of 1.8 for technical support, but this year it receives an average rating of 2.1.

Overall, mainframe manufacturers are reported to be quicker off the mark with their hardware deliveries. The proportion of users finding that delivery or installation of their equipment was ahead of schedule rises from 14.6% to

26.9%. At the same time, complaints of late delivery are down overall, from 11.5% to 8.6%.

Users credit CTL, the plug compatibles, Amdahl and NAS, and NCR with the largest number of early deliveries. ICL was charged with schedule with deliveries 18.1% of its users, compared with 11.7% for IBM. However, 9.2% of ICL's mainframe users reported late deliveries, compared with 5.1% of IBM users.

While hardware deliveries were often ahead of schedule, software deliveries were not. Only 5% of mainframe users reported early software, while 14.8% experienced delays. Just over one quarter (25.6%) of ICL users said the software deliveries had been late.

IBM mainframe users' main problem was to keep up with enhancements and changes to its hardware and software — 19% of respondents had this difficulty, especially 3032 and 3083 users. That problem was also reported by a slightly higher proportion of respondents of Honeywell, Sperry and ICL users. Few NCR users encountered the problem — only 4.8% found it difficult to keep up.

Turning to the minicomputer and small business system ratings, the good overall satisfaction level of 3.0 reported last year is maintained.

The 76 users of other, miscellaneous minicomputer companies show a lower overall rate of satisfaction with their machines than last year.

ICL has lost some ground.

In the survey, all users were asked to draw attention to significant advantages and disadvantages of their systems. The top three benefits in the whole survey are, firstly, ease of expanding or reconfiguring the system; secondly, response time; and thirdly, compatibility of programs and data carried over from other systems.

The major problems for users continue to be, firstly, that vendors failed to provide all the promised software and support; secondly, that the computer proposed by the vendor turned out to be too small; and thirdly, that required software was delivered late.

Overall, users are happy with their CPUs. The reliability of mainframes is one point up this year from 3.2 to 3.3, and that of minicomputers is 3.4. There is an average score of 3.0 out of the maximum 4.0 for peripherals reliability, quality of maintenance service, standard of manufacturers' software and overall satisfaction.

However, this year's survey reveals that, in general, manufacturers have not done much about improving the standard of technical support they are giving their users. Three aspects of technical support — troubleshooting for users, user education and documentation — are rated only 2.4 by mainframe users and 2.5 by minicomputer users.

The main grouse, apart from the relatively low standard of technical support, is the standard of manufacturers' applications software, which slips to 2.5 and 2.4 for mainframe and minicomputer users respectively. The dissatisfaction that appears in the survey may reflect the increasing efforts of manufacturers to obtain applications software via third parties.

Looking more closely at the mainframe figures, users are clearly getting happier with their systems (Figure 4). Since 1981, the number of respondents who would recommend their systems to others has grown from 71.7% to 75.2%, while over the same period those who would not recommend has dropped from 17.6% to 9.7%.

Loyalty by users to mainframe vendors is high. ICL mainframe users are the most loyal, while 25.7% intend to change their systems this year, only 1.3% expect to go to a different vendor.

IBM users are the next loyal, for while 36% have plans to replace their systems, only 1.8% intend to leave IBM.

The response to the survey by IBM mainframe users was trouble that of last year, with 39% user responses. IBM has an overall satisfaction rating from its users of 3.0 and recommendations from 83.4%. The number of users who

would not recommend their systems rises slightly, from 6.9% to 10.2%, but that is partly explained by many users not recommending the obsolete Series 370.

Sperry and NCR both improve their ratings this year. This year 20% more Sperry users than last year say they will recommend their machines to other users. At the

same time, fewer users would not recommend their systems — and most of those are 90 Series users. The overall satisfaction rating for NCR machines is up three points this year, to 2.8.

Users' opinion of the reliability of their mainframes is generally high, averaging 3.3 on the 4.0 index. Those machines with particu-

Manufacturer & model (user response/number of systems represented in brackets)	ADVANTAGES		PROBLEMS	
	Overall satisfaction (Scale 1.0-4.0)	Percentage of users happy with response time	Percentage of users finding system easy to expand/reconfigure	Percentage of users finding enhancements/changes to hardware/software hard to keep up with
(Average: 2.9)	(Average: 52.9)	(Average: 49.9)	(Average: 19.3)	(Average: 13.4)

	71.4	(69.6)	14.3	(8.7)	3.0

Fig. 4. User ratings — mainframe manufacturers.

Perkin-Elmer tops the poll in terms of overall satisfaction (3.2) and 90% of users recommending its machines, but the sample of 17 is low. More impressive are the ratings from larger samples achieved by Hewlett-Packard and DEC, which are recommended by 90% of their users.

As in the mainframe results, the two companies which received the lowest overall ratings last year gain a much bigger vote of confidence this year. Both Honeywell and Burroughs have more users who would recommend their systems and fewer who would not.

Although NCR gains ground in the mainframe section, the overall satisfaction points among its

While hardware deliveries were often ahead of schedule, software deliveries were not

minicomputer users slip this year from 2.9 to 2.5, as does the percentage of respondents who would recommend their machines. The main problem identified by users are lack of promised software (35.7%) or support, and late installation of equipment (28.6%).

However, NCR's users remain loyal, with only one expecting to move to another vendor.

Data General, Datapoint and Wang all lose ground on user satisfaction this year. The Data General figures are affected by fewer users recommending its older CS Series and Eclipse machines, and Datapoint gets a low satisfaction rating for its 6000 Series machines.

The Wang VS Series gains an overall rating of 3.1 from the 10 user replies. The lower figures for user satisfaction reflect the low number of Wang user replies both this year and last.

IBM rides high in the minicomputer charts, and even its aged System 34 gets a satisfaction rating of 3.1 from 128 users. Prime also comes out well with overall increases in its ratings by users.

User loyalty in the minicomputer sector is strong. The overall proportion intending to switch to another manufacturer's machines

over the next year is about 5%. The most loyal are IBM and Hewlett-Packard users — only 0.9% and 1.0% respectively intend to change.

As with the mainframe survey, the quality of documentation offered by minicomputer manufacturers is generally low, with an overall average of 2.5 on the satisfaction index. However, Burroughs, Datapoint and Systime are awarded ratings of 2.0 by their users for documentation. Highlighted as particularly poor are the Burroughs B800 and the NCR 9000 machines with ratings of 1.6 and 1.8 respectively.

IBM gains the highest overall score for documentation at 2.9. IBM's minicomputers are also considered most reliable by users with a rating of 3.7. Hewlett-Packard, GEC, Prime and Wang also get good ratings for CPU reliability. IBM, Hewlett-Packard and DEC gain best ratings for peripherals.

Perkin-Elmer and Honeywell minicomputers have the highest ratings for responsiveness, with 85% and 77.2% of users, respectively, happy with their machines' response time.

IBM does well in the survey for promptness of deliveries both of hardware and of software, although only 24.4% of respondents find that terminals and peripherals carried over from other systems are compatible as promised.

ICL's System 25 minicomputer comes out tops from the point of view of the number of users (83.3%) finding the machine easy to reconfigure or expand — just ahead of DEC's Vax 11/780.

However, ICL users encountered late delivery of software (22.8%) and hardware (19.0%).

A comparison of the mainframe and minicomputer user responses reveals broad satisfaction with most aspects of their machine. However, technical support, manufacturers' applications programs and the ease with which systems can be converted need more attention during 1984.

Copies of the Computer Weekly/Datapro survey, British User Ratings of Computer Systems, price £2 Swiss francs each, may be ordered from Datapro Services S.A., CH-1164, Buchillon, Switzerland. Part two of this survey will appear in next week's issue.

Manufacturer	Percentage of users who would recommend their system to others		Percentage of users who would not recommend their system		Overall satisfaction index (Scale 1.0-4.0)
	1983	(1982)	1983	(1982)	
Burroughs	Av: 78.4	(Av: 80.8)	Av: 10.7	(Av: 9.2)	3.0

Users are generally satisfied with their machines.

Meet the family

Meet General Automation's Zebra family — the first range of micros, minis and superminis to use PICK.

• Zebra 5500 — top of the range, this born leader beats off all the competition.

• Zebra 3500 — a natural Number Two, compatible with all the family.

• Zebra 2500 and 1500 — full of ambition, these youngsters could break away and form their own group, but always keep in touch.

• Zebra 750 — the baby of the group, but with the same characteristics as the rest of the family.

Like any family, ours has lots of features in common — perhaps more than most. Whatever your size of problem, and user or dealer, here's why you'll want to find out more.

GA created the whole Zebra family around the PICK relational database operating system. And that means downwards as well as upwards compatibility. A power to speed ratio better than many more expensive minis. New

IBM does well in the survey for promptness of deliveries both of hardware and of software, although only 24.4% of respondents find that terminals and peripherals carried over from other systems are compatible as promised.

ICL's System 25 minicomputer comes out tops from the point of view of the number of users (83.3%) finding the machine easy to reconfigure or expand — just ahead of DEC's Vax 11/780.

However, ICL users encountered late delivery of software (22.8%) and hardware (19.0%).

A comparison of the mainframe and minicomputer user responses reveals broad satisfaction with most aspects of their machine. However, technical support, manufacturers' applications programs and the ease with which systems can be converted need more attention during 1984.

Copies of the Computer Weekly/Datapro survey, British User Ratings of Computer Systems, price £2 Swiss francs each, may be ordered from Datapro Services S.A., CH-1164, Buchillon, Switzerland. Part two of this survey will appear in next week's issue.

Configuration possibilities:
• VME 68000-based range of processors.
• From a 1 user desk-top to a 50 multi-user system.
• From 10 M/Byte to 632 M/Byte Winchester.
• From 128 K/Byte to 1.5 M/Byte memory.
• From £8,000 to £100,000 plus.

For a further introduction or an invitation to meet the Zebra family in person, please contact: Marketing Services Department, General Automation Ltd., Sterling House, 20, Station Road, Gerrards Cross, Bucks. SL9 8EW. Telephone: (0753) 689112.

GENERAL AUTOMATION

General Automation has over 30,000 installations in 42 countries in commerce, industry and finance.</

Fred Jennings of software and systems house Data Logic has prepared a series of reports on networks called *Jensheets*. The eighth of these is on communication protocols. Due to lack of space we are obliged to print it in five instalments.

THIS Jensheet describes the general principles of operation of data communications line protocols normally used on conventional in-house links and external modem links. Special protocols used on Local Area Networks (LANs) are not covered.

A communications line protocol is a procedure used to control the exchange of data between two or more communicating devices over a point to point or multi-point (multi-drop) communications link. In general terms the communicating devices can be two computers communicating over an in-house/external point to point link; a computer communicating over an in-house/external point to point link; a computer communicating with a number of terminals over an in-house point to point/multi-drop link or external point to point/multi-point link; or two terminals communicating over an in-house/external point to point link.

Communications line protocols can be divided into full-duplex protocols and half-duplex protocols. Usually a full-duplex protocol can also operate as a half-duplex protocol, but the reverse is not true.

Full-duplex protocols support the simultaneous transfer of data in both directions (from device A to device B and from device B to device A) and require a full-duplex point to point communications link.

Half-duplex protocols only support the transfer of data in one direction at a time and can be further sub-divided into Contention

type protocols and Poll/Select type protocols. Contention and Poll/Select protocols both operate over half-duplex/full-duplex point to point links and Poll/Select protocols can also operate over half-duplex multi-point (in-house multi-drop) links.

The following are examples of line protocols:

Full-Duplex Protocols. The bit orientated ISO High-Level Data-Link Control (HDLC) protocol which is equivalent to the ANSI Advanced Data Communications Control Procedure (ADCCP) protocol. The bit orientated IBM Synchronous Data Link Control (SDLC) protocol. The control character orientated DEC Digital Data Communications Message Protocol (DDCMP).

Half-Duplex Contention Protocols. The most well known are the control character orientated IBM 2780 and the IBM 3780 Remote Job Entry (RJE) protocols.

Half-Duplex Poll/Select Protocols. Most Poll/Select protocols are used for communicating with clustered display systems and the following control character orientated protocols are the best known: Burroughs TD850 protocol; Honeywell VIP protocol; IBM 3270 protocol; ICL 7181 (CO1) and ICL 7502 (CO3) protocols; Univac U-200 protocol.

The early 1960s saw the introduction of a number of equivalent standards for a seven-bit character set for data transmission: USA-SCII (USA Standard Code for In-

Protocols you will need before and after LANs

formation Interchange) normally abbreviated to ASCII; CCITT Alphabet No 5; ECMA (European Computer Manufacturers Association) seven-bit coded character set.

These standards defined the following set of 10 seven-bit transmission control characters: SOH Start of Heading; STX Start of Text; ETB End of Text; EOT End of Transmission; ENQ Enquiry; ACK Acknowledgement (positive); NAK Negative Acknowledgement; DLE Data Link Escape; SYN Synchronous Idle.

A control character based on two character combination was also defined: DLE EOT Disconnect Switched Line Connection.

The late 1960s through to the early 1970s saw the introduction of a number of equivalent protocols (procedures) based on the ASCII seven-bit code. ECMA was the main influence at that time and UK computer manufacturers (ICL included) followed the ECMA protocol standards which were called Basic Mode Procedures for Data Communications using the ECMA seven-bit Code.

US computer manufacturers (Burroughs, Univac etc) were influenced by the US Standard Communications Control Procedures as defined by ANSI.

Jancy Check (LRC). The BCC character is formed by performing a binary add without carrying on each of the seven bits of the transmitted characters following SOH or STX if there is no SOH including any SYN characters.

In addition to BCC error checking, each transmitted seven-bit ASCII character has a parity (bit 8); this is known as the Vertical Redundancy Check (VRC) bit. VRC error checking is the only means of detecting errors in the control character sequences (ACK, NAK, ENQ etc) used in protocols, because only data blocks use BCC error checking.

IBM introduced its Binary Synchronous Communications (BSC) Procedures which included the seven-bit ASCII code but not the associated procedures.

IBM uses three character sets in its BSC procedures: Transcode, a six-bit character set which is now obsolete; ASCII seven-bit code; and IBM eight-bit EBCDIC (Extended Binary Coded Decimal Interchange Code).

BSC uses nine of the ten ASCII transmission control characters previously defined (the ACK is not used).

In addition BSC uses a number of two-character combinations to define further transmission control functions.

The following is a list of these functions with their equivalent ASCII characters in square brackets:

ACK0 [DLE 0] Acknowledgement (general purpose ACK plus ACK for even numbered data block).

ACK1 [DLE 1] Acknowledgement

for odd numbered data blocks.

RVI [DLE <] Reverse Interrupt.

TTD [STX ENQ] Temporary Text Delay.

WACK [DLE ;] Wait-before-transmit positive acknowledgement.

BSC uses an extra transmission control function based on a single character; ITB [US] End of Intermediate Transmission Block.

BSC specifies a transparent-text mode which provides for the transmission of binary data. This mode can only be used with the IBM eight-bit EBCDIC code. Any control characters transmitted in transparent mode must be preceded by a DLE (Data-link Escape) character if they are to be recognised as control characters.

The following two character combinations are recognised during transparent-text mode operation: DLE STX, DLE ETB, DLE ETX, DLE ITB, DLE ENQ, DLE SYN.

At the receiving end, each DLE of a two-character combination is stripped and for each eight-bit data pattern which resembles a DLE an extra DLE is inserted by the transmitting end.

BSC has another mode of operation known as Limited Conversational Mode which allows a data block to be transmitted in response to a correctly received data block but only if the received block is terminated by ETX or DLE ETX.

When conversational mode is not being used, the normal response to a correctly received data block is either ACK0 (even numbered data block) or ACK1 (odd numbered data block).

FORTTRAN

Brian Meek is the director of the Queen Elizabeth College computer unit.

Why standards need improving

Two weeks ago Brian Meek wrote about the project to raise a new Fortran standard. This week he explains his ambitions for the new standard

LANGUAGE standards, as a group, must be the largest and most complex standards yet produced. Most standards specify requirements for a product, though this may be abstract, like a safety procedure.

A supplier of a standard-conforming product has to ensure the requirements are met; the user has the assurance that the features covered by the standards will be present in the product.

The trouble with language standards is that they cover two kinds of product: programs, and systems which process the programs. This means that requirements for two kinds of pro-

duct, and hence two kinds of supplier and two kinds of user, are muddled.

Many, though not all of the ills of language standards - their ineffectiveness, the widespread confusion about them - can be traced back to this overlapping of purpose.

Arthur Sale, one of the principal architects of the Pascal validation effort, has pointed out that it is difficult, indeed foolish, to try to put all the requirements that one might want of languages and language processors (the hardware/software systems that run programs) into a single document. In practice, the standards pro-

duced so far have resolved this problem by concentrating almost wholly on the language itself - the programs.

Requirements on processors are usually little more than that they should correctly process correct programs. Standards committees have spent their time deciding on language constructs, while the implementers have been able to sit back, keep watch, and ensure un-

obtrusively that when an issue starts to drift off language features into something which might place obligations upon them rather than upon programmers, the matter is left "system dependent" or omitted altogether.

in-house standards.

Starting with an indirect standard is more acceptable politically, more easily achievable, and more immediately useful than going for a direct standard. But its existence may lead people to realise that a direct standard is achievable after all, and is not the horrendous thing it is painted to be.

My personal ambition (not shared by everyone on the project, I admit) is that the idea of a direct standard will become acceptable and that this will happen.

Yet another advantage of this indirect, gradualist approach is that there would be no need to scrap the indirect standard - it could remain as a safety net for those too timorous to go the whole hog.

Least the idea of direct standards in this area should still terrify the Fortran community, it is worth pointing out that direct requirements covering some relevant items already exist in other language standards. For example, the Minimal Basic standard includes some requirements on exception handling and documentation.

As a user of both languages for a good many years, I fail to see what there is about Basic that is so special that it can have direct requirements on processors included in a standard, whereas Fortran cannot.

Which brings me to the final point, the remaining major ambition: if we can produce a standard, direct or indirect, for Fortran processors - and we know we can - there is no reason why others cannot be produced for other languages: Pascal, Cobol, PL/I, or whatever. It was a conscious decision on the part of the responsible BSI committee that this Fortran project is just a pilot scheme, to demonstrate that such things are possible.

Fortran was chosen partly because it has a stable standard likely to hold for some years, because it has a demonstrable crying need for such a standard, and because a good deal of the groundwork had already been done, by people in the BCS Fortran Specialist Group, led by Alan Clarke and David Muxworthy.

Thus once this standard is published, others on the same lines can be expected - ideally produced alongside, or only slightly behind, the primary language standards. Those who look closely at the working draft, or the future published draft for comment, will find that underneath the Fortran-related surface is a framework largely independent of the particular language. This is no accident - it was designed that way.

I'd go further, I believe, though it has not yet been generally discussed, that what we are doing can be extended way beyond the languages area, to software generally, or any systems as they affect the user. This may seem an overweening ambition, but I do not believe it seems excessive.

I would go so far as to condemn as irresponsible anyone who thinks that the Elysium of post-Cobol, post-Fortran computing will not need standards.

So please don't think this exercise is confined to a few frenzied Fortran freaks. It could affect you. And you. Yes, even you in the Alvey workshop.

Those who would like to follow up some of the points raised in this article can look at my NCL Guide No. 15 in computing standards, the one on programming languages, and forthcoming issues of the *Journal of Computers and Standards* published by North-Holland.

Screen star.

The TeleVideo 924.

In a family of great performers the TeleVideo 924 is truly a star performer, offering the power and versatility you would expect from the world's leading independent manufacturer of video display terminals.

Ergonomically designed, to both tilt and swivel, the non-glare high contrast CRT combines beauty with brains. Packed with features which include 16 non-volatile, programmable function keys, 64 special graphics characters, 32 non-embedded visual attribute combinations, programmable delimiters, buffered printer port, reconfigurable keyboard.

Nor is the 924 a one night wonder. It will go on performing with unmatched reliability, an area in which its vertically mounted, convection-cooled logic board is setting new standards.

If you would like to see the TeleVideo 924 perform (or would like a more detailed biography) make a reservation with the able-bodied people on the right.

Supporting cast.

As a supporting cast we will not be as well known to you as the star performer on the left.

In bettering the service that you can offer your customers though, we are just as essential.

Because a professional back-up service can mean the difference between you giving a customer the service he wants or giving him problems he can do without.

We'll give you, for example, a firm and competitive price. We'll give you a definite delivery date (as a promise, not a guess) and we'll provide all the advice you need to make the most of every machine you sell.

From a printer to a touch sensitive screen and beyond. And we guarantee our concern won't stop with the delivery van.

Mellordata's Field Engineering Group has been on the road for ten years keeping computers computing.

It all adds up to a service which has been greeted by warm applause wherever we have performed.

As with any performance though, it's always best to be your own judge.

Authorised distributors for TeleVideo and Mannesmann Tally. Exclusive distributor for Datamedia and Carroll Touch Technology. Authorised main dealer for Eikon.

Mellordata

NEW TECHNOLOGY IN EXPERIENCED HANDS

I would go so far as to condemn as irresponsible anyone who thinks that the Elysium of post-Cobol, post-Fortran computing will not need standards

Given that standardising just the language constructs is a large enough task, it seems sensible to accept that this is enough for one standard - provided you do not delude yourself or others that you have finished the job. Unfortunately, to date this seems to be the illusion that has been consciously or unconsciously fostered.

The myth has even been created that it is unreasonable or even impossible to standardise features commonly omitted from or left "system dependent" within languages standards.

The first ambitious aim of the UK project is to shatter that myth. If there are difficulties in standardising requirements upon processors, most are political and not technical. The need is too great for the myth to remain unchallenged any longer - one has only to look at the portability problems, for programs and people, which still remain with our so-called "standard" languages, without even beginning on quality requirements.

The new "method of specifying requirements" standard is a modest step towards tackling these areas, but hand in hand with the modest aim is the more ambitious one of showing that standardisation of requirements upon processors is achievable.

Language buffs might like to regard the proposed standard as a "meta-standard" - it would be perfectly possible to use it to draw up a specification of requirements for Fortran processors and then standardise that. I hope that government agencies or large corporations might do precisely that, for

PRINTERS AND TERMINALS

The Japanese threaten to take over the printer markets

John Kavanagh sets the scene for our six-page special feature with an Oriental warning of things still to come

WHEN the leading UK computer company starts selling Japanese terminals and the world's number two computer firm loses two of its five UK terminal distributors there is clearly something peculiar about the market.

But in the last 13 months ICL has gone to exhibitions to sell Japanese products to systems houses and other third parties, while two distributors have dropped Digital Equipment terminals.

These examples are typical of a market which has been hit by the almost simultaneous arrival of the microcomputer and the Japanese. Printer manufacturers in particular are nervous about what the Japanese will do next. And meanwhile the terminal and printer distribution business has staggered from one crisis of confidence to the next over the last year.

But the industry now believes the market will largely sort itself out this year. The extent of the Japanese threat will become clearer as Japanese firms try to move up from slow-speed printers to compete head-on with European and US manufacturers in the medium and high-speed markets. And cowboys on the distribution side will be wiped out as users become more educated and demanding of their suppliers.

The arrival of the microcomputer brought demand for printers which were equally low in price. "If you look at Western markets you will find that the price of a printer has become all-important," says David Allison, printer marketing manager at UK manufacturer Newbury Data Recording.

"The Japanese have perfected the art of producing low-cost, high-volume goods. US and European companies simply can't hope to compete with low-cost 80-column Japanese printers."

Allison's views are reflected in the fact that in the first half of last

"The Japanese have perfected the art of producing low-cost, high-volume goods. US and European companies simply can't hope to compete with low-cost 80-column Japanese printers."

year UK imports of Japanese printers almost trebled in volume and value. The figures also show that low-cost units were involved: for by volume, the Japanese products represented 55% of all printer imports - yet by value they accounted for only 25%.

However, Allison says that as users get their first taste of microcomputing they soon want more powerful machines - and that has brought demand for faster, heavy-duty printers. The industry is now nervously awaiting the Japanese response to this demand.

"The Japanese firms are squeezing speeds of 180 characters a second out of their original low-cost mechanisms," Allison says. "But that's as far as they go. We're getting a lot of business at the bottom of our range from micro users, because although we're more expensive than the Japanese here our

products are more robust, being built for higher speeds.

"But after their success at the bottom of the market the Japanese will move up to meet us head-on. In the past Western manufacturers have given in to the Japanese in the slow-speed market and concentrated on the faster, more robust end of the business. But if the Japanese are moving up to compete with them they can't now abandon that part of the market and move up still further. They must now stand and fight."

Allison believes Western firms can hold their own in that fight. "For the faster products we all have to use more expensive motors and materials, which we all buy on the same worldwide markets," he says.

"This means the Japanese have the same costs as the rest of us. Where they might score is in the Japanese government's attitude towards support: companies don't have to pay back as quickly as here, where shareholders want a quick return. But even so the bigger Japanese printers we've seen so far are more expensive than ours, because of the shipping costs."

"This shows we can build on our local advantages: we manufacture here, we support and train customers using local people and we speak the language. Users like a single source for printers of all speeds, training and support and so on."

Such fighting talk hides the fact that many manufacturers have taken an "If you can't beat 'em join 'em" attitude. Indeed, Newbury Data has added low-cost low-speed Japanese products to its range. ICL is buying printers and terminals from Japan to build them into its own systems and to sell as OEM products.

Other big names in these markets are having their products made in Japan and other Far East countries. Even one distributor, European firm Geycke Electronics, has become a "manufacturer" by designing its own terminals and getting them built in the Far East.

Geycke points out that labour is cheap in countries like Korea and Taiwan, so many companies have been set up purely as high-technology manufacturing concerns. They do not try to compete against the marketing know-how of big Western corporations, so they do not have sales, distribution and field service overheads.

Geycke says many of its big-name suppliers were getting their products built in the Far East, thus adding another link to the distribution chain, so it decided to cut out one link by dealing directly with the manufacturer.

It argues that this means it can have the products designed specifically for the European market.

But Geycke's move also raises another issue which has hit the terminal and printer business. The company says making its own products gives it more control over the outputs for those products.

This control is needed to stamp out fly-by-night dealers which switch from one product to another depending on where the best deals are to be made. They might even go abroad to find a local distributor or manufacturer's subsidiary which is overstocked and glad to sell at cut rates.

These firms have no expertise in particular products and no commitment to any manufacturers.

The losers are the users, getting no help if a product needs attention, and the manufacturers, which can get a bad name because of the poor service from the dealer.

Geycke marketing executive Pat Boyce says the market has got worse in the last year - but 1984 will be a bad year for the cowboys. "Everyone's getting in on the act, but it will sort itself out by the end of the year," she says. "This is partly because there are so many companies competing and partly because users are better informed and will shun the cowboys."

Allison at Newbury Data Recording comes back to the Japanese again on this issue. "Many Japanese manufacturers have given their products to any dealer who asked," he says. "This has led to a lot of fighting between dealers over prices and many are not making proper margins."

"As a result they are no longer prepared to take certain products. So if a manufacturer wants dealers it must guarantee margins. This all comes down to proper control of the dealer network. Japanese companies have realised this and are now sorting their networks out."

Even big and apparently reputable computer firms have had distribution problems - though of a different kind - which raise a further issue over the basic design of terminals.

In the last year two of Digital Equipment's five UK terminal distributors have dropped the company's products. The latest, Zygal Dynamics, says DEC wanted the distributors to sell outside its own computer user market but that the products were difficult to sell to users of other manufacturers' computers. This was because they were too expensive,

especially when compared with Japanese terminals.

Even one of DEC's successful distributors, Rapid Recall, agrees - but also points to DEC's latest products, which bear out the thinking among other suppliers.

"DEC terminals have not been

wholly suited to the general market because they have options specifically aimed at DEC computer users," says Jim White, terminals division manager at Rapid Recall.

"But the new VT200 family will knock competitors like Televideo

and C Itoh right out."

White's point about offering basic, general terminals is echoed elsewhere. "There are dangers in making a basic product more complex," says Mike Ayres, marketing manager at CPU Peripherals, which distributes Esprit Systems terminals.

"A manufacturer is on safe ground with familiar and well-established production technology. What comes out of the factory is something that has the reliability you get with volume production. And the price is bound to be favourable."

Ayres' final comment draws attention to the fact that it is not the terminal that matters so much as the way the entire application system is designed. "We should be devoting more thought to intelligence rather than to intelligence. What matters to the end user is not where the processing is done but how to sort out significant information from the mass of data available."

These views are borne out by a recent survey of US suppliers, which shows that standard alphanumeric terminals account for over 60% of all terminal revenues. The market is growing 15% a year.

The printers and terminals feature is published to coincide with the Peripherals '84 exhibition to be held next week at the Cunard International Hotel, London. Backed by the Peripherals Suppliers Association, Peripherals '84 takes place from Tuesday, January 31 to Thursday, February 2. Opening times are from 10.00 to 5.30 on Tuesday and Wednesday, and from 10.00 to 4.00 on Thursday.

ALLISON: "We're getting a lot of business at the micro end."

PRINTERS AND TERMINALS

'Graphics quality' is a term much bandied about, but how many peripherals have really got it? asks David Casey

Making numbers come to life

DESCRIBING video display units and printers as "graphics quality" devices is a marketing ploy used by manufacturers in a keenly competitive marketplace. Frequently, that claim cannot be justified - as the multi-sided circles and inconsistent shadings bear witness.

The fact that such claims are being made for peripherals indicates the level of interest in the commercial world for systems that can turn files of unexciting numerical data into piecharts, tables and graphs.

Powerful, 32-bit computers merging graphics, data and text have their own niche in the market. Systems like the ICL Perq and the Apple Lisa are standalone machines with a high resolution screen supplied as standard.

Pre-dating the standalones as an integrated graphics system is the Rank Xerox 8010 Star terminal, a workstation for the vendor's office

As the data on a display increases the operator's ability to absorb information decreases

automation system. It is also the system which pioneered the use of the mouse as a graphics controller.

But there is also a definable market - and by every account an extremely lucrative one - for peripherals that can support more conventional computers with graphics capabilities. The concept of a high resolution screen that takes multiple "windows" to view concurrent activities has now been borrowed by DEC from the ICL Perq and the Apple Lisa.

Integration of text with data processing and graphics features underlies the Vax station range, which DEC announced in mid-1983. Aiming to achieve the graphics performance required by advanced technical users, the Vaxstation 100 is a black-and-white display monitor system. It is understood that a colour version is being planned.

As its name implies, the Vaxstation was designed for a particular family of hardware. The system was conceived as a terminal to the 32-bit Vax range of processors, and it is unfortunate that there can be no market for the station among the 300,000-strong PDP-11 user base worldwide.

Graphics applications envisaged for the system are rather more advanced than business statistics. The typical operator will edit an engineering drawing, add word processed notes, and call information from a database elsewhere on the computer. A maximum of three types of application program could be running on separate areas of the screen.

In developing its System Display Architecture, DEC has defined concepts such as "virtual screen", "pasteboards" and "virtual screen". Application software for any of the concurrent tasks on the Vax is imagined to separate virtual displays, none of which has to be brought into view until required.

At the user level, "viewports" are set up to access the contents of the screen windows and generate a composite image. The only constraint on image manipulation is the size of the screen and its resolution: the Vaxstation 100 terminals were launched with 1088 pixels across the screen, and 864 vertically.

The high resolution of the Vaxstation screen compares favourably with that of other DEC graphics products - the VS11 display tube, for example, is 512 pixels square. The system is intended to bring DEC into the Tektronix marketplace, by emulating

Tektronix's 4014 screens. For more basic applications, however, Vaxstation becomes a VT100 screen - the two protocols even running in overlapping display areas.

Away from the rarefied atmosphere of engineering software are the swelling ranks of terminals offering "medium" resolution graphics. Six hundred by 450 pixels on a rectangular screen would be an ideal standard for devices running with business information systems and many technical applications; a market that Hewlett-Packard is attempting to reach with its HP2700 terminal.

This type of peripheral has a valuable role in reducing the graphics workload on a host computer. Manipulating technical data into graphical form on a supermini or even a mainframe blocks the system from more relevant activities. The HP2700, for example, stores incoming x-y co-ordinates as vectors in its own memory and converts the information into raster format for screen generation.

The HP 2700 is essentially a colour terminal with 512 by 390 points displayed on the screen. Panning accesses a virtual display area equivalent to 32K positions in either direction, while the zoom facility scales from one thousandth full size through to an enlargement factor of more than 60.

Industrial psychologists are quick to show that as the amount of data on a display increases, the ability of an observer to absorb information falls away. The assortment of hatchings and shadings adopted for monochrome terminals goes some way to improving reception, but a surfeit of cross-hatched lines can prove as much of a distraction.

Partly to overcome this problem, terminal suppliers have been turning to colour displays. Hewlett-Packard on its 2700 device, for example, provides a total of 4096

Laser machines can handle between 10 and 20 A4 pages a minute, irrespective of image density

different hues - although the user is limited to 16 of these at a time.

Where HP has gone further than many other suppliers in colour presentation is with its approach to colour selection. Red, green and blue can be blended to create tones required, or the user can select hue, saturation and lightness as the determining factors.

Below 400 pixels by 300, the graphics capability of a terminal becomes progressively more limited. The low resolution is particularly noticeable on lines within a few degrees of the vertical or horizontal: the stepped effect which results makes these devices unsuitable for all but the most basic charts and diagrams.

Being able to manipulate graphics data through a Vaxstation, or take expanded views of a personal computer board layout on an HP terminal, may add a new dimension to software applications. But unless there is a comparable standard of reproduction at the output stage, much of the impact created will be lost.

Outside the scope of computer peripherals is conventional photography - the only way to retain a perfect coloured image of a screen display. Laser technology provides a fair representation, however, but only in black and white. Laser printers, expensive substitutes for matrix and letter quality devices, resolve images at between 200 and 600 lines per inch.

The lower laser scanning rate is many times greater than that of an video display, but scrutiny of the output reveals that circles are still

Interest in the commercial world for systems that turn unexciting numerical data into piecharts, tables and graphs is growing.

being printed as polygons. A shortfall in quality is offset by the flexibility of most laser devices to merge text files and graphics into the same hard copy.

There is also the advantage of speed: laser machines reaching the market can handle between 10 and 20 A4 pages a minute, irrespective of image density.

Laser printers trace their origins to photocopier technology, like the electrostatic plotters now widely used for the output of technical drawings. Resolving images at the 200 dots per inch level, devices such as the Calcomp 5000 series produce an output comparable with that from a laser printer, but with only a fraction of the throughput.

Constructing an image from continuous lines produces a superior image to anything assembled from dots. Pen plotters, accommodating up to eight different colours, achieve a high standard of presentation. Output speed falls rapidly, however, as the volume of information increases, while text production proves to be limited to titles and legends.

Hewlett-Packard inevitably produces pen plotters with systems matching each tier of its graphics computer range. But the company also has a graphics device based on thermal technology.

The HP7240A is a vector printer with an output on black or blue heat-sensitive paper. It is not dependent on drawing pens, so it can reproduce a monochrome image from an HP graphics terminal.

Driving a dot matrix machine to the limit of its specification can provide graphics output to an acceptable quality. The mechanical characteristics of the printer - whether successive passes of the print head can be interleaved, for example - will determine whether it is suitable.

Matrix devices are being joined in the marketplace by needle printers in which the data drives a row of pins to generate the image.

Needle matrix printers, falling steadily towards the price of daisy-wheel machines, are the best value among graphics output devices. But printer manufacturers may well have developed cheaper but more sophisticated graphics hardware by 1985.

The cost of keeping a computer up and running will account for a rising share of DP budgets, writes David Casey

Maintenance takes the rap

EVERY industry needs its whipping boy, and computing is no exception. There has to be someone, somewhere along the line, to take the stick when things go wrong. Manufacturers are sufficiently convinced of their own infallibility that they are never to blame for a system collapse.

With a trend towards suppliers offering hardware bundled with third-party software, it is no longer good politics to level criticism at the software house. Since the customer signs the cheque at the end of the day, the fault can never lie with him. And so the only target left is maintenance.

Responsible for everything from cleaning the VDU screen to diagnosing subtle errors in multi-layered programs, the mainte-

nance sector of the computer industry really does play a vital, if somewhat covert role.

The user assumes that a fully maintained installation is the norm — that the heads on the disc drives can read and write data 24 hours a day; that the printers will keep on working after the month's statements have been output; and that a complex program is 100% free from bugs.

Analogous to the intensive care service of a hospital, total support can be provided for any system, however small, but at a cost which may not be warranted by the application. How large the bill will be for maintenance depends on an array of factors — not the least significant being the complexity of the installation and the amount of

response time demanded.

For any given level of support, there is a finite cost; one to be set against the loss that would arise if a system were not up and running through mechanical breakdown or software collapse.

End-user prices of business systems seem destined to continue falling — at least during the first six months of 1984. Maintenance charges, which are based on the increasing cost of skilled technicians, cannot fall at the same rate.

The cost of keeping a computer up and running will therefore account for an increasing share of DP budgets. The end user either accepts the extra cost, or tries to make do with a lower level of support. High-budget prestige installations run-

ning a bank of mainframes or superminis can absorb the overhead, but the newer generation of small system users will attempt to circumvent the expenditure.

The introduction of distributed processing systems and microcomputers marks a change in emphasis on maintenance requirements.

While the large DP user has been prepared to consider an in-house solution, such an approach would not be economical under present conditions.

GOULD... "Scope for co-operation both at a technical level and in training."

Far greater reliance will be placed on manufacturers' service departments and the independent maintenance organisations.

Under pressure of rising costs, there is an incentive to re-assess maintenance requirements. While judicious economies can be made, there is an irreducible minimum below which standards cannot fall without jeopardising the business.

It is a case of knowing which corners to cut, and when.

The printer is certainly one area where there is no room for penny-pinching. Electromechanical devices, dot matrix printers and letter quality machines are the Achilles' Heel of any computer installation. Even minor faults, such as mis-alignments in the paper feed or mis-timing of the printing head are immediately obvious to the user. If the fault is allowed to continue uncorrected, there is a risk of permanent damage.

Mills Associates is a company with a vested interest in printer maintenance, through its third-party work on systems from ICL mainframes down to Commodore micros. John Chapman, the opera-

tion manager, noted a trend in printer sales policy. "It is becoming increasingly common for computer manufacturers to sell their machines without an output device. While this ostensibly leaves the user to select the best printer for an application, it does avoid complications for them over an inherently unreliable piece of machinery."

Reaction from small system users to the cost of annual maintenance contracts is that the service organisation does relatively little for its money — if the preventative maintenance element were scrapped, expenditure could be reduced at a stroke. The maintenance companies are quick to justify the importance placed on regular servicing: there will always be problems created by the mixture of dust and lubricating oil which pervades any printer unit.

As Chapman pointed out, there are other problems which are not experienced on processors and video terminals. "We have to account for mechanical wear and tear. Any moving part will move out of specification at some time. The fine adjustments required to reset the system cannot be made by the user. There will be abrasion on the printing heads, and further tuning required to counteract tractor feed equipment wear."

Responsibility for at least some of the maintenance problems encountered must lie with the printer manufacturers, who fail to liaise sufficiently with the support companies. Constantly introducing new devices may be a response to user demand, but it does little to improve maintenance standards.

There is a "learning curve" while the service engineers become accustomed to every new model, and the systems develop a track record in the field.

Even limited experience of the system, however, can indicate an inherent fault in the design. It

defect is indicated to the manufacturer, there is no certainty that action will be taken until several thousand more of the devices have reached users.

One reason for the lack of action is that most of the printers bought in the UK are manufactured in Japan or the US. Suppliers' distribution companies are marketing outlets — without the resources in Europe to investigate the problem — and fail to appreciate the significance of many defects reported to them.

Chapman would like to see closer co-operation between service companies and the manufacturers, to make maintenance easier. He accepts that the design of peripherals has been improving. "Suppliers are taking more notice of maintenance requirements. It is rarely necessary to strip the machine down to get at the main board."

The high cost of servicing small business systems has inevitably attracted a multiplicity of independent maintenance suppliers into a lucrative market. At the risk of a system failing through inadequate preventative servicing, first time

Reaction from small system users to the cost of annual maintenance contracts is that the service organisation does relatively little for its money

users are likely to shop around for the cheapest maintenance contract they can find.

Aware that inexperienced or under-resourced operators could tarnish the reputation being gained by the more responsible service companies, the CSA has set up a third-party maintenance group.

The chairman is John Gould, who sees the group as a representative voice to government and industry. But how could 14 independent companies — many competitive with each other — work together? Gould explained.

"There is scope for co-operation: both at a technical level and in training. Several joint agreements have already been signed, where a company is not represented in an area, but has an obligation to maintain a system. Co-operation on spares is another major area open to us."

What is lacking from the brief, however, is any formal representation to manufacturers: a role which Gould sees as impracticable.

"With almost 120 different manufacturers' products supported by the members, the task would be impossible."

Computer users are perhaps more concerned with the standards that can be set through such an organisation. The code of conduct and briefing notes published by the group, and which outline what a customer should look for before entering into a maintenance agreement, are a step in the right direction. A supplier falling short on professional standards would risk being censured by the CSA and expelled from the association.

CSA sanctions apart, there is a strong argument in favour of users buying their maintenance contracts from suppliers recommended by manufacturers. There may be no financial saving, but the threat of losing the vendor's goodwill is a sufficient incentive for

Displaying Middle Eastern character sets on a video screen introduces a complication for peripherals — the degree of processing required to accommodate subtle changes of character shape within a word

PRINTERS AND TERMINALS

Spelling it out in Arabic

Hardware is no longer holding back software. The cheap laser printer is now awaited, says David Casey

WITH one quarter Mbyte of memory on even the least sophisticated business machines, software designers are no longer constrained by computer hardware. High density Winchester disc storage and graphics-quality video displays ensure that the creative talents of system designers can be used to the full.

It is only at the output stage of a computer system that the limitations start to appear. Until the laser printer — with its 90,000 dots per square inch scanning resolution — falls to a quarter of its current price in the market, electromechanical impact printers will remain the link between applications software and hard copy.

For the majority of data processing applications, output quality is rarely a problem. Fixed pitch characters generated from a low-resolution dot matrix will suffice for all but a small proportion of user requirements.

Adding an element of text to the application calls for a higher standard of presentation, but this can be met by the increasing number of daisywheel and thimblewheel machines. Where perfection is the

have to accommodate as many as four different shapes for certain letters in the Arabic alphabet.

Early word processors allowed one keystroke for each symbol, as on an Arabic typewriter. The operator had to make the correct choice of character to suit the context.

"Contextual analysis" is the software routine which a word processor or business system undertakes automatically to adjust the shape of each character. Both the terminal and the printer have to recognise the context in which each letter appears and modify the characters without operator intervention.

Character shaping on the computer is achieved either as a feature of the application software or by modifying the operating system to support Arabic. The first route has been taken by companies writing bi-lingual packages for the IBM-PC, but it cannot restructure PC-DOS.

Falcon Systems of Maidenhead is one of a handful of systems houses which have extended the operating system — in this case CP/M-86 — so that software

software, but this cannot override the logic in the printer font chip. As Faez Tuma commented: "What we require is either less intelligence or more flexibility!"

Developing interfaces can prove time-consuming since there is no measure of standardisation in printer characteristics. Falcon, for example, spent a total of five months writing a suitable driver for the Qume, and was faced with a similar input for other printers.

Dr Tuma explained how the problem has been solved. "We have had to develop a new driver in three parts. The first is an application level, which accepts embedded control characters. A context layer on top of that is

The market for word processors and business systems in the Arab communities is worth £250 million.

specific to the type of printer — if the device cannot handle the analysis inherently, the routines are built into this stage."

The matrix printer resolution, which is an important consideration in the choice of an Arabic system, is even more critical for graphics software. The Trilux or-

ganisation of Kingston developed Doodle, a multi-purpose graphics package, to run on Sirius and Apricot machines.

Doodle is essentially a graphics design tool, but one which accepts text merged into the drawings. Any printer selected to run with the package has to meet minimum specifications in either mode,

which would not make the system uncompetitive compared to other printers already on the market.

Doodle is essentially a graphics design tool, but one which accepts text merged into the drawings. Any printer selected to run with the package has to meet minimum specifications in either mode,

A COUPLE OF DOUBLE-FACED PRINTERS.

See us at the Peripherals show on Stand No. 145

Both the 8930 and 8931 printers feature 3 print modes in one machine. They are DRAFT, NEAR-LETTER QUALITY and PROPORTIONAL PRINT.

This makes them suitable for both the Data and Word Processing user.

In performance terms, both machines will deliver High Speed Draft output at 240 cps and Word Processing quality output at 120/150 tps.

The model 8930 incorporates a fixed platen and uses sprocketed paper only.

By way of contrast the Model 8931 has a motion platen and tractor feed which allows it to accommodate both sprocketed paper and cut-sheet.

A further common feature is the Diablo code compatibility which makes both the 8930 and 8931 compatible with most word processing systems.

Ring now for more details.

PRINTERS AND TERMINALS

A new peak of 1.6 million units have come into the British market . . . John Aczel analyses the latest trade figures

Peripheral imports rise to all-time record levels

Peripheral imports totalled nearly 230,000 units during September, compared with less than 200,000 during June.

IMPORTS of peripheral equipment into the British market have continued to rise markedly and have been at a record level in recent months. In particular, imports of storage units as well as of terminals and data communication equipment have been growing rapidly, according to the latest trade statistics.

Overall imports for the peripheral sector amounted to nearly 230,000 units during September compared with less than 200,000 in June. And for the first nine months of the year, the cumulative figure has reached a record level of 1.6 million units.

In terms of value, however, imports have been level-pegging and amounted to £85.5 million. This was about the same as three months earlier, while the total for the first nine months of the year remained steady, at around £700 million.

Evidently, prices of peripheral products have continued to come down and, in September, they averaged £370 per unit; this was a considerable fall compared to the situation earlier in the year, when the average price was around £440 per unit.

Admittedly, any price comparisons of this nature should be treated with caution, due to the fact that peripheral products include a wide range of equipment of different kinds. These prices do not include wholesale and retail margins and are only given at the point of entry.

Thus, the ultimate user usually pays a higher price; nevertheless, the trend in the cost of imports seen the scene, and, evidently, even lower prices may be seen in the computer field during the coming months.

Importers have been keen to reduce their prices for a number of products

These figures also suggest that foreign suppliers of peripheral equipment are willing to cut their margins, even though sterling has been quite weak against other foreign currencies, particularly the dollar. Competition has been quite fierce in the peripheral sector and importers have been keen to reduce their prices for a number of products, particularly for printers and storage units, during this period.

The US has continued to be the main supplier of peripherals and its sales have been well maintained at over £40 million. This accounted for over 45% of total deliveries during September, but increasing competition has been seen from a number of sources.

Competition has been fierce in the peripheral sector.

while the cumulative figure has been satisfactory, reaching over 465,000 units during the first nine months of 1983.

In terms of value, however, exports have been lower and amounted to £44 million in September. This represented a drop of 14% compared to June, while, for the first nine months of the year, the total was lower than expected, amounting to £370 million.

As in the case for imports, exporters have been lowering their prices markedly. In September, the average price of a peripheral unit exported was around £600 and this compared with about £800 three months earlier. Thus, significant price cuts have been occurring, especially for storage units and printers.

British exports have performed well in some markets, particularly

in the US. Deliveries to that country reached over £3 million, which was a record figure for September and represented an increase of 12% compared to June. In some European countries, higher sales have been reported, particularly in West Germany, where they rose 10% to over £10 million.

In contrast, in the Benelux countries, lower deliveries have been seen, while sales to France have been under pressure.

The trend in exports to other regions of the world has been mixed and considerably lower deliveries have been reported to some of the Middle East countries, especially in Saudi Arabia. This market has been an important one for British peripheral suppliers, but, in September, sales fell to one of the lowest figures ever recorded, amounting to just over £200,000.

Deliveries of storage units performed well and exports of these products more than doubled in volume to 26,000 units. A useful increase in sales of printers was also recorded, but, for visual display units, the trend was easier during this period. For terminals and data communications equipment, an upward trend has been recorded in volume terms.

Nevertheless, in terms of value, they were under pressure and amounted to around £15 million in September as against over £18 million three months earlier.

As a result of the continued rise in imports, Britain's balance of trade plunged further into the red with regard to peripheral products. Thus, a gap of £41 million was seen in this sector during September as against a deficit of £35 million in June. The cumulative

deficit has also been very high, reaching £337 million during the first nine months of 1983.

In addition, a marked imbalance in volume terms has been reported, amounting to 156,000 units during September. This was a marked increase compared to June, when imports of peripherals exceeded exports by 138,000 units.

At the moment, there are no signs to suggest that this gap will be reduced to any significant degree, as imports are likely to continue to move ahead strongly.

Admittedly, exports have been performing better, and this trend is likely to continue, at least in volume terms. Higher sales to Europe will take place and some manufacturers of peripherals will take advantage of the strength of the dollar to improve their deliveries to the US.

PRINTERS AND TERMINALS

Typewriter waits for its cue

The typewriter is being groomed for the starring role of terminal. Hugh Busby looks at the likelihood of success

WHY should anyone want to use a typewriter as a terminal? After all, there is already a vast range of terminals on the market, purpose-built for specific jobs.

A sceptic's view? Certainly the typewriter manufacturers would have us think so. An increasing number of machines currently or soon to be available display features such as communications interfaces, disc drives, screens and operating systems, which seem to savour more of the worlds of test and data processing.

Is this just marketing hype by the manufacturers, induced by fear of the predicted demise of electric typewriters and the booming sales of word processors? Or is the typewriter destined to play a star role in that long-awaited office of the future?

From the way typewriter manufacturers are hedging their bets, it seems unlikely that even they know the answer. The briefest survey of the products available reveals that nearly every possible technological development has been catered for, to some extent. Word processing, text and telex, online data entry, or straightforward dumb printing under computer control - you can, in theory at least, do any of these on a typewriter.

Price range is equally comprehensive, stretching from the negligible to the exorbitant (with facilities to match). Entry level is a pretty remarkable £169.95. This will buy a Brother EP-22, an electronic portable which is small enough - and at about 3lb, light enough - to go in a briefcase.

Battery-powered, it offers a lot of facilities for the money, including a built-in RS232C interface which allows it to be used as an output printer with a wide range of micros.

At that price, the EP-22 is inevitably a lightweight contender.

The typewriter is by no means prepared to lie down and die

As a printer, it might get the home computer user out of a jam, but it has no place in the office. The print mechanism is not designed for heavy usage, it has no facilities for sheet or tractor feed, accepts a limited range of stationery, and print quality from the 7x9 dot matrix is - well, no better than you'd expect.

More interesting from the business viewpoint is the newly-announced Brother EP-44. Similar in design to its junior version, and still reasonably priced at around £250, its main feature is two-way communications, again using the RS232C interface.

It is more rugged and versatile than the EP-22, has a 4K text memory - holding about two A4 pages - text editing, and a letter quality 18x24 dot matrix.

The EP-44's most obvious application is for the businessman working away from the office who needs to transmit documents back to headquarters, or gain access to a computer.

While the two Brother portables have the field more or less to themselves for the moment, in the realm of office typewriters the competition is already well established. Nearly all leading manufacturers now provide interfaces and various add-ons for at least some of their machines. Among them, the Olivetti range is representative of current developments.

Olivetti has for some time been offering an add-on interface for its best-selling ET 121. By the end of the quarter it will have extended the option to all machines in its ET and Praxis ranges. Prices, not

This gives all-in prices from about £700 to £2,000.

Olivetti's line of development can be gauged from its recent announcements. An upgrade of the ET 121, the Octet 121, comes with up to 4K of memory and communications protocols allowing it to be used as a true KSR or MSR terminal. This approach is being adopted by other manufacturers including Facit and Hermes.

The ultimate weapon in Olivetti's armoury is the ETV 300 - in effect, a word processor without a keyboard. Based on a Z-80 processor, it has a 32K memory, twin 5 1/2in floppy discs and a 12in screen. For a keyboard you use - unsurprisingly - an Olivetti typewriter.

Other manufacturers are following similar lines of development, adding their own individual variations.

Ericsson, for example, has decided to address the budding telex market with the first BT-approved telex terminal, in the form of a modified and upgraded Facit typewriter. At present it costs £2,200, plus another £300-£1,200 if you want discs.

In considering typewriters as alternatives to purpose-built terminals and word processors four criteria spring to mind: cost, durability, speed and ease of use.

On cost the typewriters don't appear to do too well. In too many cases, upgraded machines and add-ons seem uncompetitively priced by today's standards.

A top-of-the-range typewriter costs over £1,500, and prices for serious office machines start at about £500 for a standalone machine. Compared with this, for about £700 you can buy a screen, keyboard and printer, which will allow you to access the full power of your computer - assuming, of course, that you already have one.

When typewriters are upgraded to word processors, the equation becomes more complex. Prices tend to be roughly equivalent to standalone word processors, but detailed investigation may reveal significant differences. You won't get communications facilities at present, and you may not get all the features you would expect from a purpose-built WP.

On durability and speed, too, the typewriters seem to compare unfavourably. Typically, the duty cycle, or MTBF, of a typewriter needs to be about a quarter that of a printer terminal, though there are one or two notable exceptions.

Similarly, printing speed for a typewriter used as an output printer tends to be about 20-25 characters a second, compared to 40 or more cps for a similar daisywheel print terminal.

Base of use must depend to a large extent on the user; but the typewriter again clearly has its disadvantages.

The typewriter keyboard is unsuitable for use as a data entry terminal because it lacks a separate numeric keypad, and equally for word processing, since it lacks cursor controls and the full set of function keys to which the WP operator is accustomed.

However, manufacturers would hardly have invested development funds in such a wide range of equipment which stood no chance of success.

One person who argues strongly the case for extending the use of typewriters is John Bayliss, chairman of the Information and Word Processing Association.

While conceding the limitations of typewriters as data entry terminals and output printers, he considers they have a useful role as input devices to word processors. His argument is largely ergonomic. No two keyboards, he points out, are exactly alike, and a typist who has become accustomed to a particular layout will almost

Bayliss illustrates this from experience in his own office at accountant Moore, Stephens & Co where four typists, all with their own typewriters, share a single word processor.

Throughput on the word processor, he says, is much slower because only occasional use is made of it, and a re-learning process takes place each time.

In this situation, he points out, if the typewriters have interfaces it makes sense to link them with the word processor. They can then be used for the bulk input of text, and only the editing needs the WP.

This may prove to be an interim solution only and even so could lead to problems where heavy usage is envisaged. But clearly the typewriter is by no means ready to lie down and die in the path of word processors and micros.

The makers' ingenuity seems certain to ensure that it has a long life ahead of it yet.

Hugh Busby is a freelance journalist.

Typists almost certainly work slower on unfamiliar keyboard layouts.

Good news for roving reporters, international traders, travelling sales managers, and every company that seeks a versatile, portable printer for their computer! The Decwriter Correspondent (LA 12) is a desktop printer built to interface with most systems in the world. In fact with its acoustic coupler you can plug into most systems in any part of the world over the telephone lines. With 150 characters per second in draft mode and high resolution graphics capability the LA 12 has numerous applications. Digital

reliability comes as standard. Find out more from Rapid Terminals who can offer you the service and backup you'd expect from Digital's No 1 Distributor. UNIX*, C, and Ada†...

... consult the experts!

THE INSTRUCTION SET is a new company dedicated to excellence in the fields of training and consultancy. We have an unrivalled technical team, featuring some of the best known lecturers and consultants in the UNIX and Ada communities - Mike Banahan and Andy Rutter, authors of 'UNIX The Book', Peter Griffiths, a specialist in the commercial implications of UNIX, and John Collins, a leading UNIX expert. Our Ada team is led by Dr. Alan Burns of the University of Bradford.

We can offer a wide range of series, from one-day presentations for managers or salespeople, hands-on workshops for programmers and more in-depth courses in advanced UNIX and the UNIX system kernel.

We can also provide consultancy at the highest level, as our staff have wide experience in the writing of Device Drivers, and the porting of UNIX.

We have a fully-equipped training facility in Central London, but specialise in the provision of training on a customer's site, with the material specially modified to suit their particular requirements.

Our consultants are amongst the most experienced in the industry, having trained and advised major companies all over Europe, The United States and Australia.

SPRING COURSE SCHEDULE

SEMINARS		Cost per Attendee (excl. VAT)
SYSTEM V OVERVIEW	February 15 March 14 April 25	£150
UNIX FOR MANAGERS	February 17 March 16 April 27	£150
Ada FOR MANAGERS	February 16 March 15 April 26	£150
WORKSHOPS		
UNIX OPERATING SYSTEM	February 20-24 March 19-23 April 9-13	£485
C PROGRAMMING LANGUAGE	February 27-March 2 March 26-30	£485
Ada PROGRAMMING LANGUAGE	February 27-March 2 April 2-6	£550
ADVANCED UNIX	March 12-16	£485
UNIX DEVICE DRIVERS	March 5-8 April 24-27	£485

Prices include all tuition, course materials, textbook and a buffet lunch. For all workshops a system plus terminals is provided, and for Ada, a fully validated U.S. Department of Defense Ada Compiler is used.

Graftek cuts costs of CAD/CAM

LATEST addition to the Graftek range of computer-aided engineering systems available in the UK through Engineering Computer Services is a low-cost mechanical CAD/CAM system called Comet. It is based on Gould SEL hardware with a 32-bit CPU architecture.

A feature of the hardware is that it can operate in any normal office environment. There are no additional costs involved with the installation of air conditioning, temperature control, etc.

Another advantage of the new modular system is its ability to be expanded from a single workstation installation up to 12 workstations without making the initial hardware and software obsolete.

Potential users who previously could not justify the initial investment in a high level system can now install CAD/CAM with minimum initial costs and expand as needs arise, says Engineering Computer Services.

With Comet, the first-time user is able to obtain a practical system offering 3-D mechanical design capabilities for less than £100,000. Then, as the workload dictates, the system can be extended by the addition of various software packages or further terminals.

Comet is fully interactive and can be used by personnel with no formal computer training. The

basic hardware comprises 32-bit CPU with one Mbyte main memory; 160 Mbyte Winchester disc drive; 45 Mbyte cartridge tape unit for disc back-up and archival storage and the recently introduced Meteor intelligent colour workstation with high resolution, flicker-free anti-glare display.

Software provided for the basic system is Graftek Geometric Modelling Software (GMS) for two- and three-dimensional mechanical design and draughting.

Facilities offered by the Meteor colour workstation supplied with the Comet system include local pan, zoom and drag, plus pick functions. These increase the speed of graphics manipulation and reduce processing and communications requirements.

The range of hardware options which can be supplied initially or for subsequent system expansion includes line printer, plotter, hard copy unit (either black and white or colour), additional main memory and extra storage devices, further Meteor workstations (up to a total of 12) and a voice input facility.

Additional software options cover the entire Graftek range of modular packages.

Engineering Computer Services (CW), Piccadilly, Tarnworth, Staffs. B78 2ER. Tel: 0827 873300.

Future Computers' FX30.

Storage for the Future

HIGH-SPEED mass storage is a new dimension for the Future Computers range of micros.

It comes in the form of the FX30 range with an integral Winchester hard disc, offering a storage capacity from five to 50 Mbytes.

Users will also be offered the option of integral tape back-up units, in place of the floppy, supplied through a £1.3 million deal between Future and Cipher Systems.

Price of the FX30 is around £3,000 for a single machine. "We believe this is the only micro of its type in this price range," says Bob Jones, managing director of Encoel Systems, which has an exclusive contract to distribute Future Computers in the UK.

The FX30 has a built in local area network facility as standard. Future Computers (CW), PO Box 306, Purley, Surrey. Tel: 01-683 0111.

Studio best seller makes its UK debut

THE Artron 2000 Studio Computer is about to make its debut. In less than six months it has become one of the best selling studio computers in the world for a number of reasons: it is simple to use and no knowledge of computers is necessary. The user just holds the pen and draws on the board but, at the touch of a button, the pen becomes an airbrush, technical pen or marker, with the ability to reproduce over 16 million colours, according to Graphic Products.

A complex sales graph can take the best part of a day to produce by conventional methods. With the computer it can take about 10 minutes and the image can be produced in full colour on 35mm slides, film or instant prints.

Changing colours can be done in seconds which is an invaluable aid in packaging, concepts, layouts etc. It also has the ability to store, enlarge and reduce photos, layouts and illustrations.

Artronics, the US producer of

The Artron 2000 Studio Computer.

the computer, believes that "the Artron 2000 will revolutionise the graphics industry and the 'tools' which are currently being used."

Howard Posener, managing director of Graphic Products, London, the exclusive distributor for the Artron 2000, is of the opinion that the computer will have the same effect on the studios as the repro camera. This too, when first

introduced, was considered a luxury product but has turned out to be an essential aid.

The system is on sale only through selected graphic dealers employing specialist staff who can give full after-sales service.

Graphic Products (CW), 36 Manchester Street, London W1. Tel: 01-486 9802.

System will time and datestamp automatically

SHELTON Instruments has introduced a Calendar-Clock facility for its Sig/net 2 microcomputer. It records the time, including hours, minutes and seconds; and the date, including day, month and year.

Calendar-Clock enables the operator to time and datestamp files and automatically records the date when the system is switched on.

It may also be used when sending a telex message via the computer to enable the message to be automatically transmitted at a time specified by the operator.

In addition, MCNOS, Shelton's proprietary CPM compatible, multi-user operating system, has facilities for automatic datestamping of files.

Calendar-Clock is an optional extra module which may be included in a Sig/net system at the time of purchase. Alternatively it can be fitted into a system on the user's premises by a Sig/net dealer.

There is a variety of industrial and scientific applications where the Calendar-Clock module may be used, such as process control and work study. It is one of many modules that Shelton offers for OEMs to use when adding intelligence to scientific and industrial equipment.

The modules are housed in a vacuum-formed plastic case and can easily be interconnected by a simple ribbon cable to the Sig/net Ring.

The Calendar-Clock module is available to Sig/net 2 users from their appointed dealers and to OEMs from Shelton Instruments.

The one-off cost of the module is £59.50. Shelton Instruments (CW), 74/77 White Lion Street, London N1. Tel: 01-278 6272.

Design processes automated

NOW available on Harris computers is Anvil 4000, a CAD/CAM package which has been designed to automate fully the engineering design and manufacturing processes.

Anvil 4000 provides a fully-integrated design, management information and manufacturing system for the total automation of product engineering. It originates from Manufacturing and Consulting Services (MCS) and is distributed in the UK by Impell Corp.

An important feature of Anvil 4000 is its comprehensiveness: the one system is capable of handling the design, design analysis, drafting and machining processes.

Harris Systems (CW), PO Box 27, 153 Farnham Road, Slough SL1 4XD. Tel: (0753) 34666.

The Koala Painter from Audiogenic.

Pen is mightier than the board

KOALA PAINTER, a graphics tablet from Audiogenic for the Commodore 64, allows users to produce full colour drawings and illustrations directly on screen.

The package consists of a graphics tablet with separate stylus, disc-based software, and an instruction manual.

Connection to the 64 is simple yet the package enables novices to produce high quality full colour illustrations far superior to the graphics included in some commercial games software, says Audiogenic.

The Koalpad, which interfaces directly into the 64, is relatively small (8in x 6in x 1in) and lightweight (1lb) so that it can be held naturally in the hand. The active pad surface is a 4in square that is slightly recessed with two push-buttons located above it.

The unit is contoured so that it can be grasped easily in the left hand with the left thumb pushing one of the buttons, while the right

forefinger or stylus does the drawing.

The Koala Painter menu, displayed on the screen, is divided into three sections: commands, brushes and colour palette. The user is able to use the menu and with previously stored designs, before deciding on colouring.

A brush option allows the user to vary the thickness of lines.

The command section of the menu gives the user total control over the formation of his picture. Freehand drawings can be supplemented by integral facilities for lines, frames, boxes, rays, circles and discs.

A choice of eight brush sizes allows the user to vary the style of illustration by increasing or decreasing line widths.

The complete system costs £89.95 (including VAT).

Audiogenic (CW), PO Box 88, Reading, Berks. RG1 2SN. Tel: (0734) 595647.

Add-in memory for Eclipse

AN ADD-IN memory board designed for the Data General Eclipse MV/8000 32-bit super minicomputer is announced by Mostek. The new card, the MK8033, can accommodate both 16K and 64K dynamic RAMs (SV only); the 64K version has a capacity of one megabyte and is compatible with both the 16K and 64K RAM versions of the MV 8000.

Additional features of the MK8033 include timing based on the MV/8000 system clock, four-way interleave on board, and separate read and write data paths so that one complete four-word cycle can begin before the previous one finishes.

During refresh a memory read cycle is performed to check for errors, which are then corrected by the memory controller.

Mostek UK (CW), 1 Valley Drive, Kingsbury Road, London NW9. Tel: 01-204 9322.

Hard copy data camera

THE GDS-1000 hand-held Polaroid SX-70 hard-copy camera system costs £158, yet still produces brilliant colour reproduction and excellent monochrome resolution, according to Graphic Display Systems. It uses the automatic Polaroid SX-70 Alpha or AutoFocus cameras with a range of optical hoods fitting all displays.

The user simply holds the camera and hood device against the screen and presses the button. The film automatically appears out the front of the camera and develops automatically in about two minutes.

Graphic Display Systems (CW), Bright Haven, Robin's Lane, Loughborough, Leicestershire LE11 1JH. Tel: (0954) 81074.

The GDS-1000 Polaroid SX-70 hard copy data camera.

The Cardkey Pass 3000 security system.

Mini-based security system

A SECURITY and personnel management system, launched by Cardkey Systems, the Pass 3000, is designed to provide a sophisticated alarm monitoring, security and personnel management service to medium-sized users.

The system is targeted at companies with up to 2,500 personnel.

It is based on a modular minicomputer and comes with a desk-top operator console, a 10 Mbyte Winchester disc, and a single 1 Mbyte floppy disc.

Cardkey Systems (CW), 23 Stadium Way, Portman Road, Reading, Berks. Tel: (0734) 415211.

The passive dongle from Protek for Hewlett Packard computers.

Passive dongle developed in UK

A MAJOR problem for software producers is protecting programs from illegal copying. One solution is to use a dongle — a small black box about the size of a box of matches which plugs into the back of the computer and is completely transparent in use.

The software checks to see if the code is correct and if it is wrong or the dongle is not there, it will not run.

Until recently the only dongles available for Hewlett Packard computers were active ones, requiring an external power source, and cost about £200. A British company, Protek, has now developed a passive dongle which costs about £70, with discounts for quantity.

Two versions are available. The first has codes which are set during manufacture. In the second, the

3.2 Gbyte memory for the Vax range

DATA CRUSHER VIII is the second of Darkcrest's range of plug-in mass storage expansion systems for the DEC Vax II 32-bit range.

A complete plug-in system, it incorporates Winchester disc technology, tape back-up and intelligent microprocessor-based controllers. The system incorporates from one to eight Fujitsu Eagle Winchester drives, providing memory capacity up to 3.2 gigabytes.

Installation time is less than one hour, says Darkcrest.

The use of microprocessor controllers within the sub-system produces further benefits for the DEC user. The Datacrusher range releases the existing host processor from much of the peripheral I/O work by handling these functions within the controllers.

Head offset positioning, error control, bus timing, self test and multiple drive handling are some of the included features.

The reduction in Vax processor activity increases transfer rates, allowing the user to connect three times as many terminals to the system for a similar terminal response time.

The Datacrusher allows substantially more terminals to access data without upgrading the Vax II processor.

Datacrusher VIII is system integrated and supplied by Darkcrest; service and support can be provided by DEC Field Maintenance.

Entry level to the system, which supports a wide range of operating systems including Unix, VMS and Mumps, is £16,500.

Darkcrest (CW), 70 Newcomen Street, London SE1. Tel: 01-403 5060.

The portable, battery-driven Epson HX-20.

Hand-held system for valuations

SYDNEY Development Co (UK) has been appointed official distributor for a commercial and residential valuation package, developed by Robert Greenly of accountants Stafford Robert & Partners for Haslemere Properties.

The suite of programs operates on a hand-held, battery-driven Epson HX-20 computer, incorporating a display screen, full typewriter keyboard and an internal printer. The advantage to institutional fund managers and senior estate agents dealing with valuation and development appraisal work is that they can use their own machine away from the office, without a trained operator.

A development appraisal computer program deals with commercial and residential property, both freehold and leasehold, and accommodates proposals with up to three types of commercial user and residential proposals with up to 20 types of different units. Integrated programs deal with equated yields (seven tranches).

The residual valuation program can determine either the profit on a development from a given site cost, or the site value from a pre-determined profit percentage. A decision routine is included in the program to allow any or all of the variable inputs to be altered and the process can be continued until the optimum solution has been achieved.

An agricultural investment appraisal program computes investment yields from acreage and rental inputs. The printer tabulates a spread of twelve capital prices per acre, in £25/acre steps above and below a given value, with figures for effective acreage, total cost, initial and review yields.

The basic package, including programs and the Epson portable computer, is priced at £875. An Epson external printer and connecting cable costs an additional £355.

Sydney Development Co (UK), 13 Wilton Place, London SW1X 8RL. Tel: 01-235 2939.

Powerful desk-top micro from BCL

THIS 3250 is the most powerful desk-top microcomputer in the BCL 3000 series of compatible multi-tasking, multi-user systems and its introduction widens the application areas for this series of business systems.

The 16-bit processor provides fast response times, the 5 1/4 inch Winchester drive gives instant access to large data files and the high performance streaming cartridge tape produces back-up copies from disc files in a few minutes with complete record security, says BCL.

The basic 3250 configuration has 256 Kbytes of memory, a 28 Mbyte 5 1/4 inch Winchester disc drive and ports for the connection of four terminals plus two dedicated printer ports. The system memory can be expanded up to one megabyte to support a maximum configuration of 11 visual display and printer terminals, according to user requirements, in full multi-tasking, multi-user operation.

The streaming cartridge tape unit has a capacity of 20 megabytes and provides a quick and easy way to make back-up copies of data stored on disc. Typical end-of-day security copy procedures take about eight minutes.

All this computer power fits into a desk-top unit 18 inches square.

The multi-tasking MP/MM-86 operating system of the 3250 permits the use of the wide selection of industry standard CP/M-based software packages plus the BCL multi-user commercial and vertical market application packages.

MP/MM on the 3250 will support Basic, Cobol, Pascal and APL.

The 3250 provides bi-synchronous 2780/3780 communications facilities to both 3250 systems and other computers at remote locations. It also has the facility for asynchronous communications to remote visual display and printer terminals for local processing at branch and warehouse locations.

Business Computer Systems (CW), The Pagoda, 53 Theobald Street, Borehamwood, Herts WD6 4RT. Tel: 01-207 3344.

A Calcomp 107X plotter.

World first claim by plotter maker

WHAT it claims is the world's first range of true dual mode, AO drum/cut-sheet plotters has been introduced by Calcomp.

Known as the 107X Series, the range comprises a compatible family of three 16-bit microprocessor-based pen plotters.

Designed for such graphics applications as VLSI/PCB and electrical layouts, architectural and mechanical design drafting, process, plant piping isometrics and resource and utility mapping, etc, all three models utilise Calcomp's combined drum plus cut-sheet design.

This provides switch-selectable operation as a conventional drum plotter, for unattached or batch plotting tasks, for example, or as a cut-sheet plotter for one-offs and plotting on or to pre-printed forms in sizes anywhere up to ISO A0. All standards drafting media — paper, vellum, polyester film — can be accommodated in either mode.

Prices for the 107X Series start at about £14,000 including software, installation and full first year maintenance.

Calcomp (CW), Cary House, The Ring, Bracknell, Berks RG12 1ER. Tel: (0344) 50211.

Cifer puts Unix in a box

A NEW range of "boxed micros", the Series 9000, is announced by Cifer. Aimed at the OEM market, it uses Cifer 800 series logic boards, and can be configured internally to support Unix and CP/M Plus.

The Series 9000 has been designed specifically as a hard disc machine. Unlike most professional microcomputers available there is no two-floppy disc version of the machine, and the casing is designed with the Winchester disc at one end, away from the operator.

The vertical micro design concept has been chosen to minimise desk footprint and to aid convective cooling. The narrow profile of the micro means it can easily be accommodated behind the operator's terminal or alternatively can be wall-mounted.

The basic product in the Series 9000 range serves as an add-on accessory for existing Cifer micros and disc-based intelligent terminals. Fitted with a MC68000 processor, from 256 Kbytes to 1 Mbyte of RAM, Unix, and either a five or 10 Mbyte Winchester disc, the machine plugs into any existing eight-bit Cifer micro to give single-user Unix.

The second product in the range has a CP/M-Plus, eight-bit system which utilises a Z80A processor and 128 Kbytes of RAM. Mass storage is by the built-in five or 10 Mbyte Winchester with an 800 Kbyte floppy drive for program and data transfer and Winchester back-up.

Cifer (CW), Avro Way, Bower Hill, Melksham, Wiltshire SN12 6TP. Tel: (0225) 706361.

Datagraph VTC 8001 colour graphics terminal.

Colour graphics launch

THE Datagraph VTC 8001 is a new graphics terminal from Dicol Electronics. VT100 text compatible, it also emulates Tektronix 4012 graphics. It is designed primarily for business graphics and CAD/CAM applications.

Features of the Datagraph 8000 series include a 16-bit TMS 9995 microprocessor, a 14in high resolution colour monitor, high resolution display ranging from 512x256 to 640x480 pixels, up to 256 colours, refresh 60 Hz non-interlaced, two programmable cursors, and a graphic operating system for circles, ellipses, vectors, dots and rectangles.

Dicol Electronics (CW) Bond Close, Kingsland Estate, Basingstoke, Hants, RG24 0QB. Telephone: Basingstoke 61551.

Financial memory tripled

NCR has tripled the memory on its 2262 financial terminal.

A new model of the 2262 has been introduced with 128K of memory, compared with 64K on the original model. In addition a new expansion kit enables the user to grow to 192K.

The 2262 is programmed in Basic to the user's exact needs.

This means banks and other organisations handling financial transactions can automate their procedures quickly.

The 2262 has 44 keys, each of which can be programmed to handle different functions.

NCR (CW), 206 Marylebone Road, London NW1 6LY. Tel: 01-388 8244.

An important conference for companies buying products to sell on to the user

The Computer Trade Conference is aimed at the serious computer trader. Manufacturers, suppliers and third party vendors will exchange ideas on the marketing and selling of computer products. Acknowledged specialists will present their ideas on the best ways to tackle third party sales.

Being held in conjunction with the Computer Trade Exhibition, the event is sponsored by Computer Weekly, Micro Business, Practical Computing, Systems International and Software.

Wembley Conference Centre
March 13-14

TUESDAY, MARCH 13TH
RETAILING

- 8.30 COFFEE AND REGISTRATION
- 9.15 Mass Retailing of Business Micros — Michael Milman, managing director, Greens Business Systems (a subsidiary of Debenhams Ltd.)
- 9.55 How dealers should present themselves — Chuck Hansen, managing director, Computerland.
- 10.35 COFFEE
- 10.55 What Apple expects from their dealers; what Apple gives their dealers in return — Keith Hall, sales and marketing director, Apple Computers (UK).
- 11.55 Retailing through education and training — G. Summers, managing director, Planning Consultancy Ltd.
- 12.25 LUNCH

MARKETING TO THE PROFESSIONAL AND CORPORATE MARKET

- 2.00 Choosing Your Products — Jack Schofield, editor, Practical Computing.
- 2.40 Market products and sales channels — key considerations in the building of the dealer programme — John Crawford, vice president, world wide dealer programmes, Data General Corporation.
- 3.20 Personal computer dealer marketing in 1984 — Nigel Henzell-Thomas, personal computer dealer manager, IBM Ltd.
- 3.45 DEC's approach to the marketplace — Mike Harding, marketing specialist, Digital Equipment.
- 4.10 How to approach the corporate customer — Hal Hovland, joint managing director, Hovland Business Systems.
- 4.50 CLOSE.

WEDNESDAY, MARCH 14TH
SOFTWARE

- 8.30 COFFEE AND REGISTRATION
- 9.15 Vertical market software — coverage of vertical markets by specific packages varies greatly — some sectors are over-supplied and there are many open opportunities — Russ Nathan, managing director, Romtec.
- 9.55 Procurement — How you evaluate software from various sources — David Turley, director information systems division, Tamsys.
- 10.05 COFFEE
- 10.55 Marketing Software — The Business Market — Barry Neil, sales manager, Micro Computer Products International Ltd.
- The Games Market — Nick Alexander, managing director, Virgin Games.
- 11.35 Systems and applications software developments — David Fraser, general manager, Microsoft Ltd.
- 12.15 LUNCH — Guest speaker — John McNulty, McNulty's Interchange.
- SYSTEMS INTEGRATORS AND OEMs**
- 2.00 Communication is the key to office automation — Malcolm Reip, OEM marketing manager, Computer and Systems Engineering PLC.
- 2.40 Discs and Peripherals — Bob Britten, sales and operations manager, Kennedy International Inc.
- 3.20 Printer products and the markets — Alan Clemmetsen, consultant, Mannesmann Tally.
- 4.00 Market trends in VDUs and VDU terminals — Harvey Ulljohn, managing director, Lear Siegler Data Products Ltd.
- 4.40 CLOSE.

REGISTRATION FORM

Please indicate which day(s) you will be attending

- 13 March.....
- 14 March.....

The fee of £185 plus £27.75 VAT for two days or £95 plus £14.25 VAT for one day covers attendance, coffee, lunch, conference documentation and exhibition admission. Tax invoice will be sent.

Cheques to be made payable to Reed Conferences

Please complete in block capitals and send to: Conference Administrator, Room 1313, Surrey House, Throley Way, Sutton, Surrey SM1 4QQ. Tel: 01-643 8040. Ext: 4890 and 4892.

Please reserve places for the Computer Trade Conference.

Please send me details about exhibiting visiting the Computer Trade Show (tick where appropriate).

Designed to fit on an engineer's desk top

APPLICON is launching additions to its Bravo! system. The first of these is Applicon's new 4620 desktop colour raster-scan workstation which is a colour graphics terminal, keyboard and tablet designed to fit on an engineer's desk.

The workstation is priced at \$21,000 and provides a range of graphics functionality for Applicon's CAD/CAM application software.

The workstation which occupies a 30inch x 21inch work surface, features a tilt and swivel monitor to suit operator preferences. In addition, the keyboard and tablet are combined into a single unit which fits in front of the terminal.

The new workstation offers complete graphics capabilities: the terminal has a 13-inch screen featuring eight colours, four graphics planes, and hardware-generated alphanumeric.

The desktop unit is plug-compatible with Applicon's Series 4000 VAX-11/730 and 11/751 graphics

The 4620 desktop colour raster-scan workstation from Applicon.

processing facilities and supports all of the new Bravo! 32 bit systems and application software. It can also be used with DEC VAX-11/790s. Customers can mix and match workstations on the same system, says the firm.

The 4620 uses Intel's 80186 16-bit microprocessor and includes 256K of program memory, expandable to 768K, as well as optional dual 1-Mb 5-1/4inch slimline floppy discs for off-line storage. It features 50Hz noninterlaced res-

olution in 672 x 504 format and includes power-up resident diagnostics. Applicon United Kingdom (CW), Regent House, Heaton Lane, Stockport SK4 1DA. Tel: 061-429 7227.

Wilcox micro suits builders

BUILDING contractors are the target for a new micro system from Wilcox Computers. The Wilcox 2000 is a new switchable eight or 16-bit micro with three software packages designed for estimating, costing and sub-contracting applications.

The company has only a 2% market share of computer systems in this industry, gained with its earlier systems, but company chairman Robert Shove said that an independent survey of the market by PA Consultants indicated that the system 2000 "had a bright future ahead".

The building industry has just come through a severe recession, said director Dennis Wrigley. "As a result, the margin for error in estimating is extremely small and the need for a computer system which can keep track of estimates and stocks is more obvious."

He said that the main problem with selling computers into this industry is ignorance on the part of company managers.

To help overcome the problem of management ignorance, Wilcox

offer unlimited training and hand holding until users are familiar with the system. "A lot of thought has gone into making the software easy to use," added Shove.

The micro is a departure from those previously offered by the company, in that it uses industry standard components, including Z80 A and 8088 processors and the CP/M operating system, in place of in-house developments.

Internal management of the system is handled by a separate eight-bit 6502 CPU which also controls the 15-inch screen display.

Internal storage is 512 Kbytes which can be supplemented by either two 320 K5 1/4inch floppy disc drives or up to 10 Mbytes on Winchester disc. Hard copy is available through NDR or Epson printers.

The software is written in CIS Cobol though Shove said that the system would support any high level language.

Wilcox Computers (CW), Rackery Lane, Llay, Wrexham, Clwyd LL12 0PB. Tel: (0978-83) 4866.

PRODUCTS
Daisywheel designed for the quiet office

A 40 character-per-second daisy wheel printer, launched by Sanyo Computer Services, the Director DY-40, brings together, says the manufacturer, a combination of durability, latest technology, performance and price to meet the demands for quality printers.

Significant features incorporated in the DY-40 as standard include Qume and Diablo compatibility, bi-directional printing with software selectable print pitch, built-in buffer for high throughput, choice of serial or parallel interfaces and programmable ribbon colour selection.

Paper handling provides a bi-directional feed system with automatic left and right margin alignment independent of paper width. Special noise absorption is also incorporated to ensure 62DBa levels for the "quiet office".

The Director DY-40 has a modular construction which allows for ease of maintenance and the unit has a built-in self diagnostic.

MCBF of the printer is 50 million characters and machined cast-

Sanyo's 40 cps daisywheel printer.

ings support the print mechanism to prevent malfunctioning due to distortion.

The "easy load" printwheel has 96 characters as standard, a range of languages, different type styles and fully programmable line spacing.

Warranty and full back-up service is provided with special on-site arrangements tailored for specific needs. Sanyo Computer Services (CW), SCS House, 9 Faircross Industrial Estate, Dedworth Road, Windsor, Berks SL4 4LE. Tel: (07535) 54717.

Debut of the well-trained workstation

XIONICS' Keystroke Procedure Language, KPL, for use with MasterNode and MicroNode office automation networks, aims to enable users to "train" their Xionics multi-function workstations to take a lot of routine work off their hands.

Keystroke memory facilities are not new. Word processor glossaries allow frequently-used key sequences (standard paragraphs) to be recorded, named, and called up at will. KPL takes this basic idea further.

The first advance is that KPL separates the facility from any particular application and makes it usable for all the applications available at the workstation. It can be used for word processing, electronic mail, personal computing, viewdata access, mainframe and mini interaction, and any combination of these.

The next series of advances enables procedures to operate "intelligently". KPL provides facilities for remembering words, sentences, rows of numbers, and for using these later in the procedure. It also permits these to be compared with information on the screen, or with other specified data - so that the procedure can vary its actions in the same way as the user would.

Finally, the ability to be conscious of dates and times is built in. KPL procedures can examine and compare dates and times. They can vary their actions, or cause other procedures to be carried out depending on what they find.

KPL is available, at no charge, for use with Xionics 256K workstations.

Xionics (CW), Dumbarton House, 48 Oxford Street, London W1N 9LA. Tel: 01-580 5522.

The unwind/rewind unit.

Perforating system

A COMBINED unwind/rewind unit with a programmable perforator which can be programmed to "miss and change" positions has been introduced by Hurley Moate. This system of perforating is regarded as suitable for cheque books. It can also be used for any other form of continuous stationery where perforation positions vary.

Hurley Moate (CW), 23 Backwallgate, Macclesfield, Cheshire. Tel: (0625) 616155.

Low-cost graphics launch

A LOW-COST Qume terminal, combining full graphics capabilities with normal business computing features, is being introduced by ISG Data Sales.

Using single commands, the QVT 211 GX will draw arcs, circles, lines and boxes as well as provide emulation for the Lear Siegler ADM 3A/5, the Televideo 910, 912, 920 and 925 and the Hazeltine 1500.

The QVT 211 features a separate and independent graphics memory which can be displayed simultaneously with its alphanumeric memory on a thin, adjustable, non-glare, green or amber screen.

Compatible with the Tektronix 4010 and 4014 command sets, the unit is suitable, says ISG, as a preview terminal for CAD/CAM and Tektronix Plot-10 applications.

User programming of image size and location plus additional features such as variable display windows, relocatable origin and area fill is simplified in the QVT's own built-in graphics mode.

Other features of the QVT 211 include a menu set up mode instead of dip switches; a 7x9 character format; 12 function keys; and a 25th status line.

ISG Data Sales (CW), Wellington Industrial Estate, Basingstoke Road, Spencers Wood, Reading, RG7 1AW. Tel: (0734) 884666.

The MOS business micro.

MOS micro arrives in the UK

THE MOS micro is a new business computer, designed and produced by MOS International. The system has been on sale in Australia, Africa and Europe for the past year and is now available in the UK through TKT Computers.

The processor is the industry standard Z80A with a 4 MHz cycle speed supported by 64 Kbytes of memory and an 8K ROM. The standalone workstation can be fitted, either at the MOS factory or on site, with a further 64 Kbytes of memory plus the master station upgrade board and processor to control a network of up to seven further intelligent workstations.

TKT Computers (CW), Road End Road, Oldbury, Warley, West Midlands.

Zilog's new 11 Plus system is worth examination.

11 Plus passes tests

ZILOG (UK) recently unveiled its new System 8000 Model 11 Plus.

Zilog's Unix-based System 8000 range starts with the Model 11 (£11,500) which serves eight users, has up to one Mbyte of memory and two Winchester disc drives each giving 19 Mbytes of storage.

The new 11 Plus (£14,600) maintains all these features and gives increased disc drive capacity. Users can now start with a 33 Mbyte disc and increase to 52 Mbyte or 66 Mbytes with the additional disc.

Zilog says that the 11 Plus is aimed at those users who already need 33 Mbytes capacity, yet cannot justify the cost of the Model 21 which gives up to 128 Mbytes.

The new 33 Mbyte disc drive on the 11 Plus utilises a voice coil actuator which reduces disc access time from 90 msec to 30 msec, making the 11 Plus the fastest multi-user Unix system on the market.

Zilog (UK) (CW), Zilog House, Moorbridge Road, Maldenhead, Berkshire SL6 8PL. Tel: (0628) 39200.

The Micro-Dolphin microcomputer system.

Dolphin leads the field

A NEW range of multi-user MPM-based microcomputer systems called Micro-Dolphin, manufactured in the Netherlands by Stock Control International, came out ahead of all the competition in a recent independent benchmark test.

The speed of the eight-bit Micro-Dolphin results from using a five megaHertz clock, 16-bit addressing and the elimination of wait states even during input and output.

Stock Control International (CW), 42 Upper Richmond Road, London SW14. Tel: 01-876 0102.

Digital's sensational new VT240™ terminal.
Just look what it will be replacing.

To date, graphics applications have demanded either expensive workstations or a variety of upgrades for your VT100 or VT100 look-alike.

Now, with the sensational new VT240 text and graphics terminal, you can specify a single low-cost product to meet practically all your needs. The added bonus, of course, is Digital's quality engineering and field support.

The VT240 features 800 x 200 pixel resolution and two graphics planes to achieve four grey levels (colour is available on the new VT241).

Firmware is used to execute ReGIS commands and Tektronix 4010/4014 protocols, while generating full bit map graphics. Hence the VT240 will support a broad range of software including Tektronix Plot-10™, DECgraph, DECslide, ISSCO etc.

At MBS, we're stocking the entire VT200 range for fast off-the-shelf delivery. As Digital's most successful terminals distributor, we'll spare no effort to help you get the very best from those superb new products.

Telephone now for more information.

Tektronix and Plot-10 are trademarks of Tektronix Inc.

GBC Information Systems (GBCIS) is now revealing full details of its sales system - Centex - to be marketed in the UK by its sales organisation Reliance Systems.

Centex gives low user costs, keeps communication separated from test preparation and reading; allows use of existing user terminals; provides a desk to desk capability, reducing overall message delays and costs; and gives flexibility of facilities available to particular users.

Reliance Systems (CW), Turnells Mill Lane, Welton, Northants NN8 2RB.

PERIPHERALS '84

Cunard International Hotel, London
January 31 - February 2, 1984
10.00 - 17.30 (closing 16.00 on the last day)

Especially for the computer professional

London and within easy reach of Heathrow Airport. Peripherals '84 is organised by Reed Exhibitions which also stages other major computer related exhibitions including Compucon, Software and The Computer Trade Show.

So if you're looking at the peripheral market make sure you visit Peripherals '84 and discuss your needs with specialist suppliers. It's the central event for peripherals.

Peripherals '84 is the central event in the computer peripherals industry's calendar, because it offers the specialist visitor like you, an opportunity to see the very latest equipment on offer from the manufacturers.

Only at a show dedicated to peripheral equipment including terminals, printers, disk drives and plotters, could you see the wide range of cost effective equipment available today to the professional computer buyer.

The show's professionalism is guaranteed by the joint sponsorship of the industry's own trade magazine, Systems International, and the Peripherals Suppliers Association. A simultaneous programme of seminars is held by the Peripherals Suppliers Association in recognition of the central place this prestigious exhibition holds in the peripheral industry. For full information of the seminar programme telephone Mrs Helen Gibbons on 0763 71209.

Both the show and the seminars are held at the Cunard International Hotel, Hammersmith, itself close to the centre of London.

Return coupon to: The Exhibition Manager, Peripherals '84, Reed Exhibitions, Surrey House, 1 Throley Way, Sutton, Surrey SM1 4QD

Technical Support

up to
£12,500
plus bonus plus relocation
NORTH WEST

Major developments have given rise to three significant opportunities for skilled professionals to further their careers within advanced environments.

HONEYWELL DPS 6 Support

Experience of Level 6 Hardware and Software in a communications environment, coupled with good ASSEMBLER skills is essential. Additionally an exposure to TPS, DSS and COBOL would result in the ideal profile.

Communications Specialist

Voice, Data, PABX, FAX, Digital Technology, SNA, DSA. If you have experience in any of these areas and a desire to work toward an integrated environment, this is an excellent opportunity to work at the forefront of Technology.

DEC PDP11 Analyst Programmer

A new process control warehousing development utilising DEC Technology, requires a young professional to join the team. You must have RSX-11 and MACRO-11, with COBOL and FORTRAN being an added advantage.

WORKING WITH PROFESSIONALS

The Information Centre concept grew from a need to provide users with a method for developing their own applications within a controlled environment utilising information and personal computing systems compatible with existing IBM architecture. We have established this concept, as ideas for new systems dedicated to specific applications can often be identified by professionals with practical experience of the job. In many cases however the relative simplicity of developing such applications does not merit the full project cycle. Instead the users can access the Information Centre for consultancy support and guidance on software tools along with educational and training support.

To ensure effective utilisation of the Information Centre we are building a team of specialists to link user requirements to the Information Systems Department. We now require an Information Centre Specialist to augment the team.

INFORMATION CENTRE SPECIALIST To £14,000

Arthur Young McClelland Moores & Co. provide clients with a full range of accountancy services including consultancy. The firm has over 160 partners and more than 2,200 professional staff operating from 21 offices located throughout the country.

We are seeking candidates with five years experience of applications development and some knowledge of micros to fill the role of Information Centre Specialist.

Responsibilities will consist of providing a high level of expertise in all aspects of personal computers. This can include evaluation and selection of appropriate hardware and software tools and products, assessing the suitability of a product for a particular application, and providing consultancy and an application design service. Additionally the specialist will be required to develop and implement training courses and demonstrate applications for users and clients.

You should have five years' systems and programming preferably in an IBM 4341 environment and some applications experience on 16 bit micros, using BASIC and MSDOS or PCDOS operating systems. Excellent presentation skills are necessary along with the ability to relate the Centre's services to all users. Knowledge of IBM's software tools such as DOSF, DIBOS, GDDM or APL products such as ADRS, PCF would be an advantage.

Location: London

For further details including company information please ring Francesca Drinkwater or return the coupon below.

Action!

START	PROSPECTS	SALARY
NOW	GOOD	THE BEST

D.P. Recruitment Services, part of the Duport group, is a leading international consultancy with a commitment to providing quality services to a continually growing base of blue chip clients. Challenging opportunities now exist for additional consultants to participate in the substantial growth and success of our organisation.

RECRUITMENT CONSULTANT £ Negotiable

The person we are seeking will have a recruitment agency background or will currently be working within data-processing and possess the desire to develop their career within a highly rewarding industry. Most important will be the ability to communicate effectively at all levels in a stimulating but demanding environment.

CONTRACT CONSULTANT £ Negotiable

To keep pace with client demand for contract staff. We now require an experienced contract consultant to take a leading role in establishing this new division. Considerable scope exists for the successful applicant to build their career in line with this divisions' growth and success.

LOCATION: WEST LONDON

For an initial discussion in strictest confidence please contact Peter Kennewell on 01-567 5501 or write enclosing a full C.V.

D.P. Recruitment

SENIOR APPOINTMENTS - £14K +

SALES SUPPORT CONSULTANTS

£14-16K + CAR + SUBSTANTIAL BONUS **HERTS BASE**

Our client is one of the world's leading manufacturers of computing, telecommunications and office automation equipment. Operating directly in most European countries the company develops commercially orientated systems using hardware, software and networking resources appropriate to requirements.

As a result of expansion, and in preparation for the launch of a major new product set, we are now seeking to recruit additional pre-sales support consultants who will be based in Hertfordshire and provide support throughout the United Kingdom. Suitable applicants could come from a wide variety of backgrounds where analysis and project management skills are used but should have experience in one of the following areas:-

- Office Automation, LAN's, WAN's etc.
- Commercial D.P. systems
- Turnkey systems based on minicomputers.

The role, an unusually diverse one involving pre-sales systems analysis in order to understand customer requirements and formulate viable hardware/software solutions, also includes organising and participating in exhibitions and seminars, the preparation of major proposals, and project managing the initial phases of systems installation.

Ideal applicants will be those who can combine commercial experience and personal skills with a good level of technical competence. In return the company offers genuine career development opportunities (technical, project management, man management, sales, marketing etc), an excellent salary package and all the benefits associated with large companies such as BUPA and a generous relocation package.

For details of this outstanding opportunity telephone Kevin McCourt (0734) 596346 at our Reading office. Interviews will be held at several locations throughout the South of England.

Computer Manager

£13,000-£14,000 p.a.
South East England

Our client, a subsidiary of a major multi-national organisation, is a light engineering company operating in the medical services industry. The Company has its Head Office and main manufacturing site in the South East and outlets throughout the British Isles.

An experienced professional is now needed to take control of the Company's computer department, where an ICL System 10/220 is currently used for accounting and stock control. The challenge lies in the scope provided to update the present hardware, expand the applications into several new areas including production control, and also take responsibility for the private viewdata system that is currently being established.

To match our client's expectations you should have been involved, at a senior level, in both hardware and

software applications developments in relation to ICL systems. Ability to program in Assembler and RPGII is also essential.

The salary is negotiable and will be enhanced by all the usual big company benefits, including relocation allowances if applicable.

Please write, enclosing a full c.v. to: Confidential Reply Service, Ref. BMC 8917, Austin Knight Advertising Limited, London W1A 1DS.

Applications are forwarded to the client concerned, therefore companies in which you are not interested should be listed in a covering letter to the Confidential Reply Supervisor.

of job opportunities

Senior Systems Analysts & Senior Programmers

As the result of continuing activities, a number of Senior Systems Analysts and Senior Programmers are required for the well established and successful data-processing organisation of the Samlesbury site of the Warton Division of British Aerospace Aircraft Group.

Successful candidates will join a team which is developing and supporting a variety of spares and order processing systems in an IBM machine environment operating under MVS, with SNA, providing access to a number of 3081 and 4341 mainframes. COBOL is the main programming language, with IMS DB/DC and CICS/DLI both being used to develop on-line and real-time applications.

Our specific requirements are for:

Senior Systems Analysts educated to at least HND/Degree level and with significant experience in a commercial analysis environment. Experience in the development and implementation of at least one major commercial system is required.

Senior Programmers educated to at least HND/Degree level and with significant COBOL programming experience, ideally in an IBM environment. Good working knowledge of IMS or CICS/DLI, while not essential, would be a strong advantage.

Samlesbury is the control and operating centre for the Warton Division's spares organisation, servicing customers throughout the world, and also has major production responsibilities. The site is in a pleasant rural area of Lancashire, between Blackburn and Preston and within easy access to motorway links and rail services.

Please write with full career details to:

Mr. A. Cain,
Senior Personnel Officer,
British Aerospace, Aircraft Group,
Warton Division, Samlesbury Aerodrome,
Balderstone, Blackburn,
Lancs. BB2 7LF.

SENIOR APPOINTMENTS - £14K +

I.T. Office Automation-London

When Henry Ford introduced his famous Model T, he also introduced an equally famous maxim; 'you can have any colour as long as it's black.' A maxim which when translated into modern day terms and transported into an office environment perfectly illustrates the single-supplier inflexibility of some office automation companies — but not Xionics.

Founded in 1978, Xionics has taken the lead in the concept of open interconnection in office automation systems, with the result that within a mere six years we've become a real force within the industry, winning many prestigious government and commercial contracts.

So where do you fit into this pattern of growth and expansion? The answer is simple, it is precisely because of this growth and expansion that we can now offer you the following opportunities.

Senior Software Designer/Programmers
£12-16,500

Software Designer/Programmers
£7,500-12,500

We are looking for some highly talented systems people to fulfill these vital roles within our Development Division. People not afraid to make a positive contribution to the design and development of Xionics' unique concept in the area of open systems interconnection, information architecture development and multiprocessor systems. We are looking for people with good ideas and good experience in the programming of microprocessors, while a knowledge of LANs, word processing software, communications or graphics would also be highly desirable.

Systems Support Consultants
£10-15,000

Working within our Customer Service Division and backed up both by an established field Service organisation and an expert Development Division, you will be tracking down problems in complex systems and providing a quick response service to customers who rely heavily on systems availability. This will call not only for a dynamic comprehension of the subject but also an overall technological ingenuity gleaned from your experience in software/systems design.

Distributor Support Executives
£18-25,000 package + car

These two tough, demanding and essentially rewarding opportunities will require you, from a base in Central London, to travel all over the U.K., dealing with our existing distributors and identifying and appointing new ones.

Reporting directly to the Line Network Manager, you should have had experience of dealing with distributors or OEM customers within the computer or an allied industry. You should be technically competent on the subjects of data communications, word processing and data processing and possess an all round business acumen preferably accrued from a good marketing background.

Application Support Consultants
£8-15,000

We are looking for people to work within our Marketing Division as members of our small, expert team of Application Support Consultants. This is an exciting opportunity. With good experience, you will assist customers and distributors in identifying, planning and implementing applications based on the company's products. In addition you will also be expected to participate in other Marketing Division activities such as presentations, demonstrations, product planning investigations and the preparation of sales literature.

Major Account Managers
£25,000 package

Several high powered sales people are required to accept the challenge Xionics offers.

Your job will entail the management and development of prestige accounts involved in some of the largest and most exciting office automation projects in Europe.

We are seeking mature people with a solid technical background, a proven sales record preferably on major accounts in the office automation or an allied industry, who really want to get in at the forefront of a rapidly expanding market.

Because Xionics is a young company with a dynamic outlook and a proven record of success, we can offer you exceptional opportunities for career enhancement, the possibility of overseas travel, a benefits package that's second to none and the real chance to get ahead and stay ahead as we expand.

Ford Model T 1908

For further information please write enclosing full c.v. to Lyn Fox, Xionics Ltd., Dumbarton House, 68 Oxford Street, London W1N 9LA or telephone 01-580 5522.

XIONICS
AN INTEGRATED OPPORTUNITIES EMPLOYER

MVS/XA Implementation**Holland****c. £2700/month**

We are seeking two experienced MVS Systems Programmers to undertake an initial 9-month assignment in Holland assisting with the expansion of an international DP network involving installation of twin 3081's and implementation of MVS/XA with JES2. Working as members of a small MVS team in an unusually pleasant environment duties will include both XA implementation and support of the existing MVS/SP 1.3/JES2 based systems. Previous XA experience whilst useful is not essential but applicants must be able to work with the minimum of supervision.

B069

DASD Package Evaluation**London****c. £2500/month**

We are seeking a senior MVS systems programmer for a 6 month assignment at our Client's twin IBM 4341 Data Centre. The initial task will be to evaluate available DASD space management software against the Client's needs, organise trials of appropriate packages, then plan and implement the final choice. There will be some pressure on this task because of the imminent arrival of 3380's in May/June. The successful applicant is likely to have a good understanding of MVS, and preferably will have already carried out package evaluations.

J071

MVS Systems Programmer**Home Counties****c. £2750/month**

We require an experienced Systems Programmer to act as the senior member of a team supporting MVS/SP 1.3 and JES2, recently installed under VM/SP on our Client's 3083. The task is to tailor MVS so as to improve the availability and performance of the production service which supports CICS, IMS DB and TSO, as well as to provide training and guidance to the other team members. The successful applicant will have a good understanding of MVS, and should preferably have some knowledge of the other products. The assignment is initially for 3-6 months with the possibility of extensions.

CDS is an Anglo-Swiss Consultancy specialising in systems programming and DB/DC application development. For further details of the above positions or for an informal discussion on future European or UK assignments please contact Mike Shing at our UK office Tel 0276 681261 (or through our answering service on 0276 681266 during evenings/evenings).

Telex 858062

CDS Limited, 19A Park Street, Camberley, Surrey GU15 3PQ.

CDS IBM Systems Programming and DB/DC Specialists

Systems Programmer — Networking

The Rutherford Appleton Laboratory, part of the Science and Engineering Research Council, supports scientific researchers in universities and polytechnics throughout the UK. The Computing Division provides large scale computing services and coordinates computing research programmes. There is a large IBM-compatible mainframe complex, and a number of VAX (VMS and UNIX), GEC, PRIME and PIRQ computers.

A vacancy exists for a systems programmer with a strong interest in networking to work on a local area network development programme. The current developments use a variety of technologies including Cambridge Ring. The work is directed towards the adoption of national and international protocols such as IEEE 802 and ECMA.

Experience with more than one of the above machine architectures is desirable.

The appointment will be in one of the following grades, depending on qualifications and relevant experience:

Higher Scientific Officer £7,149-£9,561
Scientific Officer £5,682-£7,765

The Laboratory is a friendly community with its own restaurant and sports facilities nearby.

Benefits include a local transport service, sick leave allowance and generous holidays. Some assistance with expenses incurred in house sale/purchase may be available.

Application forms from Recruitment Office, RAL, Science and Engineering Research Council, Chilton, Didcot, Oxon OX11 0QX. Tel Abingdon (0235) 445435 quoting ref VN 191.

Closing date: 16th February 1984

**HOW GREEN IS YOUR VALLEY?**

A GRASS ROOTS CHALLENGE FOR YOU AND YOUR FAMILY. We want to introduce you to a lifestyle that's far beyond the reach of most people. It's an altogether richer, fuller way of life, and it's one which we are now inviting ambitious Analysts/Programmers to share with us...

THE CHALLENGE OF CHANGE. Let us introduce ourselves, we are British Telecom Data Processing Executive — one of the most influential and fast-developing Divisions within B.T.

Here, in Cardiff, we are concentrating on some of the most critical and complex computer applications. We're perfecting highly sophisticated systems of stores and stock control. We are also developing on-line order handling and fault repair systems using Database Management techniques. Operations such as these rely on our ability to exploit B.T.'s sophisticated arsenal of ICL 2900, IBM 4300, and Honeywell Level 6 Systems.

That's why we're in the market for more Software talent...

YOUR CREATIVE CONTRIBUTION. Essentially, we're after men and women with at least 18 months' commercial DP experience. Professionals with, ideally, a confident fluency in COBOL, TP-based Systems or IDMS. Above all, mature people who can contribute creatively and so rise to the mind-stretching challenge of telecommunications.

RETURN TO THE REAL QUALITIES OF LIFE. However, Cardiff promises a good deal more than intellectual

stimulation (important though that is). It offers modern shopping centres, easy commuting, excellent schools, an exciting social life, modestly priced town houses and country cottages plus, of course, the whole wealth of Wales on your doorstep...

The haunting beauty of the Gower Peninsula, the rugged escapism of the Brecon Beacons, the sweeping sandy bays and spectacular scenery of Pembrokeshire and a host of sporting activities from fly fishing to rugby... it's all here, and it's all within easy reach.

And the same applies to prospects, if you want to move along almost any management avenue, the paths are wide open. With B.T. you don't have to change company to change course.

That's what we mean by 'Green Valley' challenge. A possible £11,000 p.a. buys a great deal of career satisfaction, scope and sheer living here in Cardiff.

If you live within striking distance of Cardiff, ring us and then call in to meet the team at: The Duchess Suite, Park Hotel, Park Place.

Cardiff on Thursday 2nd February between 5.30 and 8.30 p.m. If you can't make it, ring us right away and let's discuss your future. Please get in touch today quoting reference (CW)

Data Processing Executive British Telecom

We have the name... Have you the talent!**Newbury — £Negotiable**

We are Micro Focus — one of the fastest growing software product companies in the world. We have a prestigious new headquarters building in Newbury, Berkshire, with additional offices elsewhere in the UK and in the USA.

We have an exciting product line enabling the implementation of COBOL on a wide range of micro-computers, backed up by a powerful set of development tools. In 1983 we achieved an extremely successful flotation on the Unlisted Securities Market since when the stock price has risen consistently.

With that background Micro Focus has a great deal to offer enthusiastic, committed software professionals — now what can you offer us?

Our expansion plans for the next six months mean that we now wish to employ a number of skilled System Programmers and Software Engineers.

Run-Time System Programmers: Here you should offer good Assembler experience with a strong background in C/UNIX. You will have a degree plus 1-3 years in industry and ideally a background in run-time support-package development.

Compiler Software Engineer: If you have an interest in compiler development here is a valuable opening — you will be developing a new compiler into a marketable product. You should have some compiler experience already ideally COBOL, and a high degree of self motivation with the ability to work on your own initiative.

Code Generation Software Engineer: For this role we need a specialist — experienced in code generation techniques with the ability to implement a new product from scratch. You will need good micro Assembler experience and, ideally, familiarity with a number of different processors.

At Micro Focus we can offer you a bright career and an exceptional environment. Salaries will not be a problem for the right people and you will also enjoy the benefits of a subsidised staff restaurant, relocation assistance where appropriate, and an IBM PC(XT) on every desk.

For further information concerning any position contact:

ISC System Ltd

"State-of-the-Art"

Financial Terminal Systems requires

Experienced Hardware & Software Specialists

ISC Systems Limited is a subsidiary of ISC Systems Corporation in the United States of America, specialising in Integrated Financial Systems. ISC is a relatively young organisation which has satisfied a specific requirement in the systems market. Already, this multi-million dollar company is expanding its operations in Europe, South Africa, Middle East and has decided to base its World Trade Operations in the United Kingdom.

In order to launch this exciting new venture in the U.K. ISC Systems Ltd are looking for both Hardware and Software specialists who are capable of working in a demanding environment, making important decisions and are self-motivated.

The successful applicants would ideally be aged between 23-35 years and have at least 3-5 years' computer experience, and have the potential to gain a senior managerial position within the company in the future.

To become part of ISC's success, firstly you must be highly professional, decisive and capable of contributing to the company's future developments. You should also be proficient in at least three of the following:

- ★ Microprocessor software development (8 or 16 bit), preferably on Intel or Zilog equipment.
- ★ Financial application systems.
- ★ Mini/Micro computer systems.
- ★ Data Communications.
- ★ Good Assembler Knowledge.
- ★ Mini/Micro engineering experience.

A high salary in the area of £16,000, plus company car, generous bonus scheme, private health insurance and pension scheme will be awarded to the successful applicants.

For further details, please contact Steven Knowles-Baker on 01-370 2012/3, or alternatively, send a C.V. to him at N.K.B. Associates Ltd, 159a Gloucester Road, South Kensington, London SW7 4TH.

All enquiries will be treated in the strictest confidence.

SENIOR APPOINTMENTS - £14K +

Information Systems Manager

New Appointment

New Information Systems Division

for a £1000m. turnover fast moving consumer products manufacturing and marketing organisation with a planned commitment to instal completely new distributed data processing facilities throughout a widespread network of production units, warehouses, and head office.

Reporting to the Commercial Director, the appointee will set up, organise and control the new information systems division, establish systems development and implementation strategy, and be responsible for the phased acquisition and installation of all hardware in over thirty locations.

Demonstrable experience in managing the systems development function in a large multi-location production and distribution organisation is highly desirable. Applicants should possess experience not only in developing effective custom built systems, but in investigating and successfully implementing software package solutions, to meet a broad spectrum of user information systems needs, on time and within budget. Whilst experience of directly managing a number of distributed data centres in not essential, the ability to establish and oversee an effective operational service function is vital. Age indicator is circa 40.

The location of the appointment is Surrey, and an excellent salary, company car, and benefits including relocation expenses as appropriate will be offered to the successful candidate, who will be unlikely to be earning less than around £20,000 salary already.

Please send a fully detailed CV, or write or telephone for an application form to ANTHONY SPURR, Manager, Executive Selection Division, quoting reference number GW1166, at the address below.

BIS Applied Systems Limited
York House, 199 Westminster Bridge Road

SYSTEMS ANALYST

CENTRAL LONDON

£12,000-£14,000

Our client, a leading international company, is seeking an experienced Systems Analyst. You will be involved in financial applications and will be based in a prime location.

Applicants should have a technical background in an IBM environment. A thorough knowledge of IBM operating systems is essential as is the ability to communicate effectively.

Ideally you will have approximately five years' experience in the data processing industry of which two years should have been spent in an analysis role.

The rewards are high for the right person. Not only an excellent salary, but also the benefits associated with a major company.

Contact Lesley Thompson or Melanie Lindeman on 01-499 7761 (daytime) or 0494 31025 (evenings) for further details.

Comms. S/W Designers

Herts. £10K-£18K

A highly successful British company which is producing some of the most advanced systems in digital communications is seeking additional software specialists to work on a range of design and development projects. We would prefer to see previous experience in comms. but real time and systems software designers with assembler and high level language experience should apply.

Liaison Manager

Middx. c.£20K + car

Technical experience with DECNET and RSX11 are essential for this very attractive, senior, position. Our client is installing a major network of terminals throughout the U.K. for a well known High Street retailer. Your job will require tact and diplomacy to work closely with the client and technical skill and firmness for liaison with development personnel.

C.A.E. Consultancy

London £12K-£18K

A number of experienced people with specialised knowledge of computer aided engineering are urgently sought by this client. Positions exist from mid-range designers to senior consultants who can perform high level sales support. This is a timely opportunity for you to join a leading systems house with an impressive reputation in industrial applications.

Analyst/Prog. DOS/VSE

Berks. c.£12,000

Our client would like to meet candidates who are conversant with the DOS/VSE operating system and who have applications programming experience in COBOL. You would be expected to provide a user service on a proprietary package which is designed specifically for International magazine subscriptions. A knowledge of CICS and some assembler experience would be useful.

Software Manager

c.£20,000 + Exec. car & benefits

If you are technically up-to-date with developments in systems software and have a proven track record in man management, preferably gained with a computer manufacturer or large systems house, this could be your perfect move. Our client is strengthening its management team and offers real scope for the long-term development of your career. Benefits include relocation where necessary.

Mainframe Applications

London to £20,000

A major systems house with an outstanding reputation is seeking several people from mid to senior in experience. Candidates will have had design responsibility for DB or TP systems in a mainframe environment. There are opportunities for Project management, Consultancy, Design, Training, Trouble-shooting etc. People with a positive attitude will find unlimited career opportunities in this very successful company.

Engineer Supp. Mgr.

Berks. to £13K + car

An ideal opportunity for an experienced field engineer to make a significant career development move. If you have previous supervisory experience and would welcome responsibility for prime sites in your region please get in touch. Our client will expect candidates to negotiate maintenance contracts, be responsible for selection and appraisal of engineers and to demonstrate good communications skills.

Systems S/W Designers

Beds. £9K-£14K

A major computer manufacturer with an impressive range of products is continuing to expand its engineering centre and requires more software implementers and designers. Projects cover UNIX systems, multi-access systems, compilers and development aids. Your experience should include design and development in assembler and use of a block structured language. Some Team Leader opportunities. Reloc. assistance.

Mgr. Systems Installations

Berks. c.£15.5K + car

Our client, a world leader in environmental control systems, requires a manager to control further development of existing software and organise the installation of complete systems on client sites. The successful candidate will have several years experience of project management, staff selection and customer liaison and will be primarily responsible for all software application projects taken on by the company.

Banking Proj. Mgr.

Herts. c.£16K + car

A highly successful U.K. subsidiary of an American company is seeking an experienced project manager to handle major business in the banking sector. Candidates will need to be familiar with banking applications. They will also be required to demonstrate a positive attitude to good client relations and will be technically competent in the areas of TP and communications.

Support Analysts

Bucks. c.£16K + car

Continuing expansion in this highly successful manufacturing company opens the door for software people with experience in on-line D.P. systems, T.P. and comms. Candidates will be expected to assist clients with applications development, perform sizing as required and generally act in an account manager capacity. Excellent prospects and reloc. assistance where appropriate.

Pascal M68000

Berks. £8K-£14K

A number of software people are required to fill new vacancies created by expansion. Our client is developing specialised products for communications and broadcasting. These are M68000 based with most development taking place on a host DEC machine using assembler or Pascal. An O.S. specialist with M68000/VERSADOS skills would be of particular interest. A very attractive company.

Product Support

Herts. c.£13K + car

Our client has established an impressive lead in the provision of EFT systems for Tandem computers. These processing and switching systems are designed for users of all sizes. We would like to hear from well motivated people with experience of screen based applications. Candidates must have the appropriate appearance and manner for support work.

Micro Electronics

Herts. to £14,000

Electronics designers who can demonstrate an in-depth awareness of the application of micro processors to real-time technical problems will find challenging projects and long term career prospects with this client. Candidates will work in small teams on current and new projects. Knowledge of Intel 8088 and some programming skill would be useful. Reloc. assistance where appropriate.

Systems Analyst Develop a large company's new business systems from scratch Middx/Herts border c £15,500

Our client is a world leader in the design and manufacture of advanced electronic systems with an exceptional reputation worldwide. They are now establishing a new information systems function including the installation of new hardware to support a demanding systems development plan.

They are now looking for someone to define the detailed business systems needs for each sector of the company and build and lead teams to implement them. You will report directly to the Information Systems Manager.

You should be a self-motivated business-orientated computer professional with

practical experience of working with users to define systems requirements. In addition you will need a record of successfully implementing projects in a complex commercial environment - at least one project in a leadership role. Hardware background is not critical but a knowledge of IBM and DEC would be an advantage. A degree or professional qualification would be preferred. Age range 27 - 40. In addition to the salary this position enjoys a range of excellent fringe benefits including relocation expenses should you need to move.

Write with c.v. quoting reference 09/43 to the address below or telephone for more information.

AGB Recruitment

173 Sloane Street, London SW1X 9QG
Telephone: 01-235 9891

A member of the AGB Group of companies

A New World in High Technology Computer Aided Engineering

Senior Service Engineer

Our client based in West London, a dynamic American corporation, is a market leader in the field of computer aided engineering, with a growth rate of over 100% per annum. They design, manufacture, market and service CAE work stations that have significantly accelerated the process of developing electronic systems and integrated circuits by improving the productivity of the Design Engineers and the quality of their designs. Their work station based CAE product is sold on a turnkey basis and consists of a micro-computer, high resolution graphics display, graphics tablet and keyboard and sophisticated software modules and device libraries which run on VAX 11780 computers.

Due to their exceptional growth, they now wish to appoint a Senior Service Engineer who will cover the United Kingdom and sectors of continental Europe. You will be responsible for hardware and software installation, pre-sales site inspections and assist the sales force in

Income Package Circa
£16,500 + Prestige
Company Car + Stock Options

advising customers of site requirements and ensuring that systems are correctly configured.

As this is a key appointment, candidates should preferably have an H.N.C. or an equivalent degree in electronic engineering, be highly professional, hardworking, and self-reliant and be able to solve 'system' problems. You must have at least two years systems maintenance experience, preferably gained on VAX equipment and be familiar with at least one operating system.

Our client of course, is prepared to reward high calibre professionals and an attractive salary is offered together with a comprehensive benefit package which will include BUPA, Life Insurance, Stock Options and Company Car.

This is an exceptional opportunity to join a unique environment where advanced computer technology is driven by an enlightened and young management team.

MARKETING MANAGER

ARDICO-BURROUGHS are the Burroughs distributors in Saudi Arabia for the whole range of Burroughs products within the Commercial, Banking, Finance and Government sectors. Continuing expansion of their operations has created the need for additional Sales and Management personnel as follows:

In addition to co-ordinating activities of a team of three or four Sales Executives, specific responsibilities will include Sales and Marketing strategy planning, together with participation as appropriate in all facets of the sales and marketing function.

SALES EXECUTIVES

Reporting to the Marketing Manager, the Sales Executives will be responsible for the generation of new business and the extension and enhancement of existing client relationships.

CSE MANAGER

Responsibilities will cover all hardware and support activities through a customer support team for the complete range of Burroughs computing and ancillary equipment.

For all positions it is essential to have the required sales, marketing or engineering systems background to handle the tasks described and to have worked on one or more of the range of Burroughs equipment.

The company offers 3-year renewable contracts with good employment conditions and extremely good incentive bonus scheme; married status may also be considered.

For further information please contact John Dalroth, Marketing Manager, Tel: 01-493 2947. 24hr. Fax: 01-493 2947. Email: jdalroth@dalroth.co.uk. Please send 3 duplicate resumes to ARDICO-BURROUGHS, PO Box 8087 Riyadh, Saudi Arabia. In order to be considered.

Systems Programmers

Attractive five figure starting salaries
plus relocation assistance

Rural Essex

Our Client is one of the largest IBM users in the UK, running an expanding nationwide teleprocessing network of over 1,800 terminals and RJE's, from two major IBM Data Centres, one of which is located in a pleasant, rural area of Essex.

The site maintains an impressive configuration comprising IBM 3033 and Amdahl V7 mainframes running MVS/JES2, IMS DB/DC, CICS/DLI, VM/CMS, RAMIS, NCP, VTAM, MSNF, and TSO/SPF. A hardware upgrade, possibly involving the installation of a third large mainframe and migration to MVS/XA are planned for this year.

In such a progressive environment, opportunities for career progression are excellent. Openings currently exist for Systems Programmers with varying levels of experience, who seek broader technical involvement with the very latest in IBM systems software.

Applications are therefore invited from Systems Programmers with at least twelve months experience, ranging up to Senior Systems Programmers, where, at the more advanced levels, specific skills in perhaps VTAM or IMS would be especially welcome.

Whatever the length or breadth of your experience, our Client is keen to discuss the future with you and, in simple terms, will pay you what you are worth.

Apart from superb career prospects and involvement with the latest IBM hardware and software in a developing site, you will benefit from on-going training and excellent working facilities in a new and well equipped Computer Centre, situated in clean, rural surroundings, away from the 'commuter crush', yet only 35 minutes by rail from London and within easy reach of the popular East Coast resorts.

For Systems Programmers looking for room to develop their careers in a large and well resourced IBM environment, our Client offers unrivalled opportunities for personal and technical development. If you wish to refresh your career, start by sending your c.v. to Ian Payne at the SCR Birmingham office, giving details of current and expected earnings, home and work telephone numbers (to be used with the utmost discretion) who will arrange to meet with you in confidence at SCR offices in either London, Birmingham or Manchester to suit your convenience.

Telephone: Dunstable (0582) 608002
Telex: 827536Excellence in
Communications

South Coast £9,000 to £16,000

This company is an international centre of excellence for advanced communication and control technology. Projects are currently being won and undertaken on a world-wide basis. The company structure, however, is based on compact, dynamic project teams, not on megalithic, unstructured mass.

The current projects involve esoteric communications systems incorporating software design and microprocessor-based applications. Data-communications projects incorporate computer controlled switching systems, teletex and complex packet switching systems.

Real-Time Software Engineers Opportunities exist at all levels for Programmers with two years experience through to Chief Engineer.

Hardware tends to be project dependent, but typically includes Intel 16-bit micros, Prime, DEC PDP-11 and VAX minis (Unix, RSX-11M, VMS). High and low level languages are used as necessary (including 'C'), picking the best one for the job in hand.

The Rewards A good starting salary, an exceedingly generous relocation allowance, a well defined career path and the chance to live in one of the most beautiful parts of England - all contribute to make this company a must for further investigation.

Contact Modus for more information.

SPECIALISTS IN COMPUTER CAREERS

SUPPORT THE PC!
and earn up to £16k

Currently we are undertaking recruitment of support staff on behalf of IBM PC dealers and software houses nationwide. The enormous demand for the PC micro and the stringent standards of user support set by IBM for its appointed dealers means that there has never been a better time to move into this exciting business area.

We are urgently seeking enthusiastic and user-oriented professionals within the following categories:

APPLICATIONS SUPPORT. Programmer/Analysts with micro programming and/or design experience, awareness of the business software market and ability to implement both packaged and bespoke applications software.

TECHNICAL SUPPORT. Systems Software or Application Programmers with knowledge of micro hardware, op. systems and comms/networking OR background in IBM mainframe op. systems and recent involvement in micros.

SALES. Experienced Salespeople with sound track records in related product areas can achieve £30,000 OTE. Specialist 'vertical market' knowledge (e.g. Accounts, Legal, Medical etc.) is of particular interest.

TRAINEE PRE/POST SALES SUPPORT. Graduates, good degree, computer involvement biased to business applications. Outgoing personality, able to deal confidently and sympathetically with PC users at all levels.

Remember, the IBM PC and derivatives have behind them the huge development resources of IBM itself. IBM micro systems are here to stay, prospects are superb and NOW is the time to secure your future. Call JOHN GRAHAM to discuss your situation or send your C.V. to the address below. (Evenings/weekends please ring 06285 21922).

ONE YEAR CONTRACTS IN THE ARABIAN GULF

This is your opportunity to join our large team of Consultants already working in the Gulf. We have more experience than any other UK Company in arranging contracts in this area, and your application will be treated confidentially and with great care. Should you be accepted, we make all the arrangements for you, right up to the point of installing you in your first-class hotel.

You will be working for one of the World's Largest Oil Producers, on large and sophisticated IBM computer hardware. This is an opportunity not to be missed and a chance to bring your skills up to state of the art level, and earn a lot of money - tax-free! There are over 20 places available, and one is tailor-made for you.

You will work in modern offices, drive the latest model cars on super highways and live in extremely comfortable accommodation, where there is a strong club spirit. As an added bonus the sun shines over 300 days a year! (N.B. These are Bachelor Status contracts).

The Benefits Package Includes:

- 1 YEAR RENEWABLE CONTRACTS
- EARNINGS £20,000 to £32,000 per annum, according to job and experience.
- TAX FREE!
- AIR CONDITIONED, Expenses paid COMPANY CAR
- FREE TRAVEL AND MEDICAL COVER
- SICK PAY
- FREE HOTEL ACCOMMODATION - Air conditioned, single occupation rooms, telephone, colour television, private bathroom.
- FREE RECREATION FACILITIES, including - Swimming Pool, Tennis Court, Gymnasium or Squash Courts, Snooker or Games Room, right next to the hotel
- FREE RETURN FLIGHTS every 4-6 months
- 5 to 8 weeks HOLIDAY each year - salary paid

THE JOBS - STARTING DATES ARE FROM JANUARY TO APRIL

- PROGRAMMERS & ANALYST-PROGRAMMERS £20,000 to £22,500
- 3 to 5 years' experience of PL/1, TSO/SPF
- IMS experience advantageous
- SENIOR PROGRAMMERS/DESIGNERS £24,000 to £25,000
- 7 to 10 years' experience of PL/1, TSO/SPF, IMS/DB
- IMS-DC & ADF advantageous
- BUSINESS ANALYSTS £25,000 to £28,000
- 10 years' D.P. experience
- PERSONNEL PAYROLL PENSIONS experience
- System definition to implementation
- SYSTEMS PROGRAMMERS £25,000 to £32,000
- 3 years' (min.) experience of:
 - MVS/MTCE
 - Multiple CPU systems
 - VTAM/TP, SMP
- OR
- DEC/VAX
- TRAINING INSTRUCTORS Up to £30,000
- Either
- DEC/VAX
- OR
- 3081, MVS/JES2
- SYSTEMS ENGINEERS Up to £28,000
- WANG hardware and software, interface to IBM/SNA
- ANALYST PROGRAMMER £22,000
- Datapoint
- SENIOR ANALYSTS £28,000
- 10 years' experience
- IBM background
- User interfacing
- Mini/micro experience advantageous either Project Management Experience or long range planning experience

THOMS HOUNSDITCH SCOTCHHOUSE THE GREAT UNIVERSAL STORES GROUP GLOBAL TOURS AND TRAVEL BURBERRY

Beneath every commercial success, there lies a solid foundation of technical excellence and innovation. The Great Universal Stores is no exception!

Once again they have entered the New Year with an impressive budget for the expansion needed to meet the high demand for new systems, major enhancements and technical development. Their twin Amdahl V7's have been reviewed for up-grade two years earlier than forecast as their systems order book fills at an enviable rate.

To meet these demands, they seek to recruit the following ambitious and capable DP personnel to whom they offer security, high salaries, expansion of skills, career development, challenge and excellent re-location packages:-

Systems Analysts to £12,500

Systems Designers to £11,000 Programmers to £10,000

If you have the experience to work in, or adapt to, an environment consisting of the latest releases of MVS, CICS, VSAM, VTAM, COBOL, PL/I, ROSCOE, then you have the opportunity of joining the East Midlands' fastest expanding and most successful computer site to work on a variety of large and interestingly different commercial applications.

The Great Universal Stores is not just another Company, it is one of the U.K.'s largest groups with a turnover in excess of £2 billion. It relies on its people, let it rely on you. Phone Phil Harkcom now on 021-643 8501 (Business Hours) or 021-308 4285 (Evenings and Weekends) or fill in and return the FREEPOST coupon to Computer People Midlands, FREEPOST, Alpha-Tower, Birmingham B1 1BR.

Creating the tools for Ada

"The advent of integrated software support environments is undoubtedly the most exciting yet challenging aspect of the Fifth Generation Software Engineering Programme. It is a concept that confirms the 'forward thinking' industry professionals belief that effective software tools and automated software design are the key to a better computer industry".

**Salaries

Technical, Sales & Management Appointments

Specialist Computer Recruitment Ltd

We are a well resourced, wholly British concern, playing a highly visible role in realising this concept by the establishment of a new Software Products Company. We are committed to achieving excellence in the production and marketing of tools for the emerging ADA Programming Support Environment.

Our positive response to this enormous software engineering opportunity, combined with our recognition of the need for product portability underwrites our future success. All that remains is to attract the team of talented software professionals whose skill and original thinking will create the products.

Our development programme creates NEW opportunities for Project Leaders, Team Leaders, Designers and Programmers who will enjoy dedicated 'state-of-the-art' development, based on powerful 32 bit super minis.

Whilst experience of ADA/APSE would be welcomed we recognise the need to train. We would therefore wish to meet with candidates possessing at least eighteen months' software engineering experience using PASCAL, or indeed any similarly structured language.

If you feel you can contribute to this exciting realisation of the user-friendly and intelligent computer systems for the Fifth Generation, contact our Advising Consultants **Stephen Brown** and **Alan Carnell** on **01 935 0671** or telephone in the evenings from 7.00 till 10.00 on Hornchurch 72610 or Harpenden 2976. Alternatively, submit a full Curriculum Vitae in confidence to our London office, marking this reference GS2.

Field Support Consultants for Cullinet.

c. £16,000+CAR

Whatever the question nowadays, the answer is software. And software is Cullinet, the world's leading independent software company, is again expanding its UK operation. This operation is responsible for the marketing and support of software products which include data base management, tele processing, application development facilities, applications and decision support systems.

We are based in spacious new offices in Stanmore and need Field Support

Consultants for our growing customer base.

The position involves providing individual customers with advice and guidance on the strategic use of our software products.

Candidates should have an IBM background with experience of major systems implementation in an online database environment.

Please write, enclosing CV to:
Marion Kay, Cullinet Software, Cullinet House,
The Broadway, Stanmore, Middlesex HA7 4DU.

Real-Time Computer Systems Professionals £10,000 to £16,000+

SCIENCE SYSTEMS is a well established systems engineering company with offices in London, Aberdeen and Bristol. Recent successes in both the AEROSPACE and PROCESS CONTROL fields have resulted in further expansion at both the Aberdeen and Bristol offices. Opportunities exist at various levels within the company for well qualified numerate engineers.

Software Engineers

The Bristol office is primarily involved in the fields of space and communication systems. Both junior and more senior staff are required.

Junior candidates should have:-

- * a minimum of eighteen months industrial experience
- * microcomputer e.g. DEC PDP 11, VAX or microcomputer e.g. ZILOG 80, INTEL 8086 experience
- * knowledge of high level programming languages e.g. FORTRAN 77, CORAL under MASCOT and/or assembler
- * experience of working in a team environment

The more senior candidates should in addition have:-

- * experience of real-time systems design
- * proven team leadership experience
- * the maturity to accept financial and technical responsibility for fixed price projects

Candidates having a background in either the aerospace or defence industries would be of particular interest.

Bristol

Systems and Software Engineers Aberdeen

Candidates for the position of Software Engineers should have:-

- * a minimum of two years industrial experience
- * microcomputer and microprocessor experience, in particular one or more of the following: MOTOROLA 68000, ZILOG 80, INTEL 8085, INTEL 8086, ARGUS 700 and DEC PDP 11
- * knowledge of high level programming languages e.g. PASCAL, CORAL and/or assembler

Systems Engineers, with either a software or hardware background, should have:-

- * a minimum of five years experience in instrumentation and/or control systems using microcomputers and microprocessors
- * for more senior positions, proven contract and project management skills

Candidates for both positions will ideally have a background in a petrochemical or process control environment.

We would also be interested in hearing from candidates who would like to work in London for a short period before relocating to Aberdeen.

Salaries are negotiable and will fully reflect the challenging nature of the work and the degree of responsibility offered. Career opportunities are excellent. There is a good fringe benefits package and assistance will be given with relocation if necessary. For further information regarding these opportunities please write to Derek Ashley at:-

Science Systems Limited
60 Kings Road, London SW3 4UD or telephone: 01-581 1481

SALES & SUPPORT SPECIALISTS

Is your career as advanced as our Data Communications Products?

Many organisations claim to be at the forefront of modern technology, but few can match the advanced range of sophisticated communications products marketed by our client. As a young, but already well established and respected company, with a product range including modems, personal computers, videodata software packages and communications networks, they are poised to make further inroads into the marketplace. Additional sales and support specialists are now needed to maintain the already considerable momentum.

Regional Sales Executives (2)

North of England
& Midlands/West based
£13,000 + Bonus + Car

These two opportunities offer the rare challenge and increased scope of selling the complete product range to our Dealer Network and Distributors. Proven sales experience in a DP related field, together with ambition and drive, are essential requirements in order to expand your future career prospects with a young, progressive and successful company.

Hardware Support Specialists (2) Software Support Specialists (2)

London based £10,000
Essentially office based, you'll have the technical knowledge sufficient to answer queries from both Dealers and End Users in one of four areas: CPM based micro hardware or CPM micro software at a small business systems level; data communications and modem products; data communications software. Additionally, you would be expected to help provide a technical training to Dealers and their sales staff.

For further details and early interview call Noel Price on 01-278 6426, or 01-286 9417 (7pm-11pm) or write to him with full CV to: ACSIS Inc., 97/99 Bowling Green Lane, London, EC1R 0BQ.

M.I.S. SYSTEMS ANALYST Central London £11,000-13,000

A major UK Finance House based near Covent Garden is developing several major new systems, one of the most significant being a new Management Information System based on a 4th generation software package. The feasibility study stage of this project has just been completed and an additional Systems Analyst is required to join the small team which is about to start the main project development.

The successful candidate will have had at least 2 years Systems Analysis experience, preferably with MIS in an IBM mainframe environment. The ability to communicate effectively with all levels of management is essential.

Salary is negotiable within the above range according to experience, and will be accompanied by a generous benefits package which includes Non-contributory pension, group BUPA scheme, subsidised restaurant and, after a qualifying period, season ticket loan and mortgage facilities.

Please ring David Mason Johns today on 01-948 5922 or 01-891 0906 (evenings and weekends) for an immediate interview, or write to him at the address below.

EMPAGY

IBM Systems Programming in Rural Wiltshire

We are the fast expanding Systems Programming Group of a large well established IBM mainframe installation. Our IBM 3031 under OS/VS1 has recently been joined by an IBM 4331 (VM/370 and APL) in order to provide a personal computing service to our users, and a migration to MVS is planned for early 1985.

This developing environment has now created opportunities for a number of Systems Programming personnel, with experience levels from Programmer up to Manager, to join and contribute to the expansion.

For the Systems Programming Manager and Senior Systems Programmer posts, we would obviously like a sound background in IBM software and the ability to control and motivate the technical team. For other positions, we are willing to build upon a good IBM background and provide software training if necessary.

We are prepared to be flexible when considering all applications as the training available is both comprehensive and varied. Successful Candidates will be involved in implementing major software developments, evaluating and installing software packages, and solving day to day problems. Excellent prospects are available to those seeking a career in systems programming, and benefits include relocation assistance and modern working conditions.

If you would like to be considered, contact our Advising Consultant, **Ian Mason** on 021-236 3781 (24 hour answering service) or on 021-353 5721 (Evenings and Weekends).

Senior Programmer

£10,000, plus bonus
IBM 4331 COBOL VM

Nottingham - "The Queen of the Midlands". Our cultural and sporting activities include top class cricket, football and rugby. We have one of the finest theatres in the country. The housing and travel are of a high standard and inexpensive and the shopping facilities are probably the best outside London. The city is at the centre of a comprehensive road/rail/air network. We really have a great deal to offer.

We are a well established and highly successful finance house, part of a major group. Our small data processing department currently supports an IBM 4331 mainframe under VM and using TSO, SPF, VSAM, DL/1 and SAS.

To strengthen our team, we are seeking an experienced COBOL Programmer, probably with two or more years exposure to VM and EXEC 2, to work on a variety of applications.

In addition to technical challenge and a high proportion of development work, we offer the prospect of early involvement in systems analysis within an informal and constructive working environment.

Benefits include four weeks annual leave, group pension scheme with life assurance and relocation assistance to Nottingham where appropriate.

If you can demonstrate proven ability in VM and seek a satisfying and absorbing future, telephone **Jim Mitchell** on 021-236 3781 (24 hour answering service) or on 021-427 2291 (Evenings and Weekends until 9.00 pm).

Systems Analysts c £10,500 RPG III Programmer/Analysts c £9,000

Mid-Wales

Recently a great deal has been said about the scope and opportunities to be found in Wales, but at Laura Ashley we've been aware of that fact for a long time. Over 20 years to be precise. In the rural beauty of Mid-Wales we have developed the home furnishing and fashion products that have made us internationally famous, investing in every kind of resource that will enhance this success still further. DP is one of our prime commitments. We have established an IBM System/38 facility that is at the very forefront of development, serving a diverse range of applications. But because we're ambitious and forward thinking, we do not intend to stop there. We want to maximise our computer power and consequently are investigating many new areas of involvement. That's where your challenge starts.

Systems Analysts (2 positions)

If you would like to be part of an exciting development programme covering Production, Retail and Financial systems in an online database environment, then we would like to hear from you.

System/38 experience is not essential. What is more important is an ability to develop systems from the initial feasibility stage through to full implementation with the minimum of supervision.

RPG III Programmers/Analysts (2 positions)

If you are an RPG III programmer with at least 18 months application programming experience we would like to hear from you.

We are starting a large scale development programme covering production, retail and financial areas in an online database environment involving the setting up of an international network.

You should be able to involve yourself totally in a department that expects its development personnel to liaise directly with users with a minimum of supervision. Benefits for all positions include a 4½ day, 38½ hour week, 4 weeks holiday, discount on company products and generous relocation assistance when appropriate.

Phone Richard Milsum, for an informal and confidential discussion of your requirements on: 01-354 1055, during office hours or on 01-958 2553 evenings and weekends. Alternatively please send full details to me at: March Computer Recruitment Ltd, 1 Noel Road, London N1 8HQ

Analyst Programmers and Programmers Consider the Benefits . . .

- ★ 5 Year Development Programme
- ★ Exceptional Career Progression Opportunities
- ★ CICS and DL/1 Training Provided
- ★ IBM 4341 to IBM 3083 Upgrade in Mid-1984
- ★ Up to £13,500 + Substantial Company Benefits Package

As a Company we are leaders in the field of providing finance for the domestic and business markets. We enjoy the stability and security afforded by being a subsidiary of one of the UK's top clearing banks.

Our commitment to the use of data processing has never been stronger. We make full use of IBM and TANDEM equipment, but of particular interest is delivery in mid-1984 of an IBM 3083 to replace an IBM 4341, operating MVS.

We are now at the early stage of a five year IBM Systems Development Programme, incorporating online and database techniques. Our core system for business is currently being redeveloped, and once implemented, a substantial new systems development programme will get under way. Fundamental to the success of this programme is the need to recruit in two areas —

Analyst Programmers with 3 or more years IBM COBOL experience;
Programmers with 2 to 3 years IBM COBOL experience.

For you to work effectively, we will provide full training in CICS and DL/1 (if you have these skills already, so much the better). You will work in a project team environment which offers every opportunity for career progression to project management levels. Should you wish to further your career in more technical areas, then we have the scope for you to specialise.

Our location in Covent Garden makes for easy access from virtually all Main Line railway stations, and the Underground. Company benefits include Non Contributory Pension Scheme, Health Care Plan, Profit Sharing, Subsidised Staff Restaurant, Generous Holiday Allowance and, after a qualifying period, an Interest Free Season Ticket Loan and Subsidised Mortgage.

Now that you have had a chance to consider, why not find out how to reap the benefits by telephoning our Advising Consultant, **Stephen Brown**, on the SCR London office telephone number below or 04024 72610 evenings and weekends. Alternatively submit a detailed C.V. to him at the SCR London office.

Contract Assignments

(Commercial and Hi Tech contracts in the UK and Overseas)

DEC Software Programmers (3)

To maintain and support client software. Hardware VAX and PDP running under VMS and RSX, based in W. Germany. German speakers preferred. £650pw

IBM Software Programmers (6)

With minimum 3 years tech support exp. of IBM 3705, 300X, 43XX mainframes. In depth exp. on any of the following: MVS, MVS/SP, VAX, DOS/VSE, or systems and/or CICS, DL/I, TSO/SPF, IMS/DC, IDMS, ADADIS, COPS. Software support contracts in W. Germany/Austria and Switzerland for German speakers. £700pw

UNIX Specialist (1)

To install and provide UNIX support on behalf of Software House, some travel from W. Germany. Assignment to run in excess of 1 year, must be German speaker. £ Very good rate.

Prog/Analysts (2)

Manufacturing company, East Midlands require experienced HP3000 MPE TPL contractors. Knowledge of IMAGE VIEW QUERY and GENSYS would be a distinct advantage. In £500pw, duration 3 to 6 months.

Design Engineers (3)

With Degree and exp. of VAX VMS and FORTRAN OR UNIX & C to function in Hi Technology company, based in Scotland. Applications include Engineering, 3D Systems, Electrical and Drawing Office. Graphics exp. is an advantage. £750pw, according to exp.

Project Leader (1)

Strong character to lead small team of Prog/Analysts, previous supervisory exp. required, must be able to speak German. Insurance systems exp. is essential. W. Germany based, long contract for right person. £750pw

Database Designer (1) Database Administrator (1)

Start Feb 84, based Central Germany, prefer fluency in German, long assignments, IMS/DB/DC are essential requirements. £750pw

IBM Software Programmers (3)

6 month contract blocks for experienced MVS System Progs. based in Northern Germany, must be able to speak German. £700pw

For more information on UK and Overseas contracts please telephone CLIVE CHATTIN on 01-552 8092 or write to him at: Howard Organisation Ltd, Russell House, 140 High Street, Edgware, Middlesex HA8 7BS.

Analysts/Programmers

£8,000-£15,000

PSION

We are a leading microcomputer software house with an outstanding record of growth and profitability, active in the fields of business applications, systems and home entertainment software.

We are currently recruiting analysts/programmers with micro-computer experience and experience of VAX VMS, C, MS-DOS, 8086, 68000, Z80, 6502, Cross Assemblers or Simulators.

Competitive salaries are offered, based on relevant experience. This is an exciting opportunity to join a young, dedicated and highly trained team in one of Britain's fastest growing companies.

Apply in writing enclosing a Curriculum Vitae to: The Recruitment Manager, Psion Ltd, 2 Huntsworth Mews, Gloucester Place, London NW1 6DD

(7400)

IBM USA and UK

Programmers, Analyst/Programmers and Analysts, minimum 2 years' experience IBM COBOL, OS DOS or MVS, preferably with knowledge of CICS and/or DL1 - Various locations BOTH SIDES OF THE ATLANTIC.

Systems Programmers we are looking for a number of experienced people for a variety of installations e.g.:
2 years VTAM SNA VM/CMS CICS, 3 years' OS Assembler CICS (U.K.)
MVS + VTAM ITAM CICS or
+ VM CICS or
+ JES2 IDCAMS VSAM } BAL essential, PL1 useful (U.S.A.)

1984 OPPORTUNITIES

WEST MIDDLESEX/BERKS BORDERS £12,000
IBM SYSTEM 34/38 DEVELOPMENTS

An extensive program of RPGII and RPGIII projects are currently scheduled with our client a well-known commercial organisation. They seek to recruit programmers to perform both programming and analysis liaising closely with the User area. Applicants should offer at least eighteen months programming in either language and RPGII candidates will be offered RPGIII training. Ref: A1

EAST BERKSHIRE £9,500-£11,000

IBM BASED PROJECTS - ANALYSTS & PROGRAMMERS
COBOL, CICS, DL1 projects are currently being developed by our client located in a very accessible part of Berkshire. They are seeking Systems Analysts with around two years' experience of Analysis ideally together with a programming background, and programmers with at least two years COBOL for whom CICS and DL1 training will be available, and project work will cover a wide range of commercial/financial systems. Ref: A2

CITY TO £10,000 + BENEFITS
RPGII/III - BANKING

International Banking systems provide constant challenge and interest in terms of computer systems development and our client is no exception. With systems already using RPGII on System 34 they are planning for the development of SYSTEM 38 RPGIII systems. If you can offer around eighteen months RPGII or RPGIII programming experience you can expect to develop your career towards system design and analysis. Ref: A3

NORTH KENT £7,000-£13,000

ICL COBOL ANALYST/PROGRAMMERS/PROGRAMMERS
A leading Consumer Products Manufacturer is now embarking upon a range of new commercial developments in COBOL on ICL 2800 VME systems using on-line and database software. They now wish to recruit programmers with at least two years ICL COBOL to be fully involved in these challenging developments, where there will be appointments to work with Users. Ref: A4

SYSTEMS & SOFTWARE ENGINEERS

Advance
your
career
in time

Marconi
Underwater Systems

The past year has been an important one for Marconi Underwater Systems. On the technical front a host of Software and Hardware advances have confirmed our position as world leaders in underwater technology.

Right now we are looking forward to a far more exciting year ahead and that is where the opportunity is to establish yourself within a young company involved in the design and development of the world's most technically advanced projects. Order books are full offering job security well into the future. The time to make your move to a more ambitious future is now.

Candidates with Degree/HND qualifications in Physics/Maths/Engineering/Computer Science are required for the design and evaluation of complex underwater systems. Vacancies exist in the following areas:-

Trials Planning & Assessment

Involving the detailed planning of trials necessary to support the weapon development programs and the subsequent analysis of weapon behaviour

Mathematical Modelling

Experienced engineers are required to derive mathematical models of complex weapon systems and their environment and to design and develop both digital and real time simulations of these systems

Performance Evaluation

Using analytical methods and computer simulations to predict the performance of complex weapon systems and evaluation of trials to assess the effects on weapon system performance

Algorithm Development

Comprising the design of the algorithms which determine the 'cleverness' of the software controlled weapons, using techniques such as pattern recognition and artificial intelligence

Real Time Software

Engineers are required at all levels with experience in one or more of the following to develop software on DEC or GEC Computers to control weapons or real time simulators:-

MARCONI UNDERWATER SYSTEMS LTD.,
GEC Estate, 68 East Lane, North Wembley,
Middlesex HA9 7PX.
Tel: 01-908 4094 during office hours
(Thursday until 6.00 p.m.)

CORAL/PASCAL/FORTRAN/ASSEMBLER

MICROPROCESSORS - INTEL, TI, HP
ARRAY PROCESSORS - APPLIED DYNAMICS AND FLOATING POINT SYSTEMS

Data Analysis Software Engineers

To develop FORTRAN software on VAX 11/780 computers to provide user friendly facilities for the analysis of simulation and trials data. Data storage facilities include a RELATIONAL database and the hardware used includes COLOUR GRAPHIC displays and hard copy PLOTTERS.

Your time and our time are important. If you are not able to contact us immediately but would like to know more about this young company with its informal friendly management style we have put together a taped message which will explain exactly why we are at the forefront of our industry. Telephone 100 for Freefone Neptune and the message.

On the other hand you may prefer to see us at one of our informal interviews which run from February through to March at: Dragonara Hotel, Bristol, February 2; Ladbroke Mercury, Watford, February 6; The Post House, Hemel Hempstead, February 9; The Crest Hotel, Welwyn Garden City, February 21; The Broadway, Letchworth, February 22; The Post House, Swindon, March 7. It's up to you to take these real opportunities and influence events, where achievement is rewarded with career progression.

Or better still, telephone or write to Trevor Graves today

manage the skillful use of means; succeed in one's aims.

SUPPORT ANALYSTS Central London to £18,000 p.a.
We have been assigned the task of finding energetic and innovative professionals to join one of the fastest-growing computer companies in the U.K. If you have experience in one or more of the following, then turn your thoughts to a bright new future:- Pre and Post sales support
★ Project management with mini computer manufacturer ★ Transaction processing
★ Database ★ Financial systems ★ Communications and networking Ref 416

SOFTWARE DESIGNER Hertfordshire £11,000+
Software enthusiasts - become involved in design, implementation and integration of real-time systems software on DEC minis and micros. Join forces with a leading supplier of sophisticated process control facilities to industries throughout the world. Benefits include: ★ Relocation ★ Pension Scheme ★ Free Life Assurance ★ Sports & Social Club etc. Interested ??? Ref 427

PROGRAMMER ANALYSTS London £13,000
Programmer/Analysts - participate in the development of the North Sea oil and gas industry relating to information and control systems currently supporting large construction projects. Keep yourselves occupied with the following: IBM ★ Various minis and micros ★ COBOL ★ PL/I ★ Natural ★ CICS, Adabas and much, much more! Ref 336

COMPUTER RECRUITMENT SPECIALISTS

VAX System Programmers

Credit Suisse First Boston Limited, a major International Investment Bank based in the City, requires two experienced VAX System Programmers. The bank has two 11/780 computers with a large in-house terminal population and a steadily increasing volume of fast response processing. One of the successful applicants will be responsible for the design and implementation of the VAX software environment, the other will assist.

Applicants must have at least one year's experience of VAX system programming design using Macro and some experience in a commercial computing group is desirable.

A competitive salary will be offered to the successful applicants along with generous banking fringe benefits.
In the first instance, please contact T.M.B. Kerrigan Esq., 22 Bishopsgate, London EC2, Telephone 01-283 4200.

Computer Operations Supervisor

HTV has two Honeywell minicomputers at its Cardiff administration centre: A Level 6 on which several financial applications are run and a DPS 6 which provides office automation facilities and transaction processing systems to administration users. A local area network is already installed and its use will be extended following the move to the new Television Centre at Culverhouse Cross. There is also a link to a Honeywell mainframe computer in London, which is primarily used for commercial air-time sales.

The use of the latest communications techniques and systems methods has led to an increase in the amount of specialist operations work within the Computer Department. As a result, a vacancy exists for a Computer Operations Supervisor, who will also have special responsibility for providing end user support. Applicants must have a minimum of two years experience preferably at a senior level and they must demonstrate that they are competent users of available system software. A knowledge of Honeywell Level 6/DPS 6 hardware and GCOS6 Mod 400 system software would be an advantage though not essential.

An attractive salary will be offered together with excellent staff benefits.

Suitably qualified candidates should write for an application form, enclosing a self addressed envelope and quoting reference CW/304 to: The Personnel Manager, HTV Limited, The Television Centre, Cardiff CF1 9XL.

TELECOM GOLD

Where People and Communications meet

London Analysts/Programmers/Systems Engineers £10-£15,000

Telecom Gold are the market leaders in Electronic Mail and associated office services, providing a wide range of integrated communications and information services to a National and International client base.

The growth of this client base since the companies launch in 1982 has been nothing less than dramatic. Telecom Gold are poised for further substantial growth in 1984, and are planning a range of service enhancements and national development programmes.

To resource this programme a number of high calibre, results-orientated professionals are required to work in a small, friendly, multi-disciplined team in their modern offices near London Bridge. Vacancies exist at all levels and career development opportunity is given for project involvement from inception to implementation.

Do you have experience in one or more of the following areas?

- * Prime Hardware and Fortran
- * Message Switching
- * Synchronous Protocols
- * Micro-Mainframe Communications
- * Vendor Software Acceptance
- * Software QA/Change Control
- * Fourth Generation Languages
- * Database Techniques

If so, and to find out more about this unique opportunity, contact your Advising Consultant, Stephen [Name], in the London office telephone number below or 04044 72610 evenings and weekends.

DP PROFESSIONALS

two routes to success

Come along for an informal discussion

Our Systems Department is vital to our on-going success and is rapidly expanding to satisfy business growth. We are currently changing from ICL to IBM hardware and our present configuration comprises IBM 3033 and Atlas 10 mainframes.

We have a major commitment to a significant on-line database systems programme covering distributed stock control, purchasing and management information systems. We are now looking for additional DP Professionals to help us develop our business into the 1990's.

Call in to one of our open evenings, we will be pleased to meet you and discuss in greater detail the outstanding career opportunities we have to offer.

If you can't make it on any of the dates, please ring Lorraine Catherides on 01-921 6047 for an application form or to arrange an informal discussion with our Systems Managers.

Alternatively, please forward a detailed c.v. to her at J. Sainsbury plc, Wakefield House, Stamford Street, London SE1.

ANALYST PROGRAMMERS

BANKING SYSTEMS - TO £16,500

System 38 is the analyst/programmer's dream machine. And ours is one of the very few software companies dedicated to the development of Banking, Insurance and financial application packages for IBM's most sophisticated computer.

We need three analyst/programmers to join our growing Banking team, developing systems for our International Banking clients in the City.

We have our own System 38 model 7, a bright modern office and a wealth of S/38 expertise.

If you have been working on the S/38 for at least 18 months, are friendly, confident and keen to develop your design and analytical skills - then you may be the kind of person we're looking for.

And if you want a competitive salary and the chance to work with a company which will recognise your ability, then you should certainly telephone or send career details with a summary of why you find this position attractive, to:

Sue Hayes, Banking Recruitment, Ref: CG1201

Contracts in the North

P-E Computer Services Limited, a long established software house, opened a northern regional office in Manchester in 1980.

Due to the continued success of this office we have now moved to much larger premises just to the south of the city.

We have for many years supplemented our own staff resources with freelance computer professionals and are currently planning our resources allocation for contracts starting early in 1984. All grades of staff are required to work both in the north and overseas.

Whether you are available now, in the near future, or are just considering freelance work for the first time discover P-E's approach to freelance employment by telephoning or writing to Peter Moore at the address below.

TEAM LEADER SYSTEMS DEVELOPMENT

Move into rural Wiltshire and join in our success

Since 1985 our company has grown into a £30 million, truly international business - one of the major independent frozen seafood companies worldwide. Along with our success the company still operates a policy of encouraging individual participation.

As Team Leader, reporting to the Accounts Manager you will have the opportunity to make a real contribution to computer systems development at a time when all our systems are under review to meet future needs.

Ideally you will have a business studies qualification and general business background, including 2-3 years in a computer environment with relevant systems experience.

Starting salary range will be c£10,000, with progressive increments. Benefits include non-contributory pension and life assurance, free BUPA and relocation help to this attractive area.

Our system is based on a Honeywell DPS4, using release 1.10 with IPS and our language is COBOL.

For further details please ring or write to: Alan Mundy, Flying Goose Limited, Barrow House, Bishopstrow, Wiltshire, Wiltshire BA12 9HU. Tel: (0885) 214568.

(7473)

A CHALLENGE FOR THE FUTURE

Analyst/ Programmer

The new Fife Ethylene Plant in Fife, Scotland, is scheduled for start up in 1985. The Plant is in an attractive location within easy reach of Edinburgh. Designed to convert North Sea Gas to ethylene efficiently, this plant represents an investment of over £400 million and it will rely heavily on up to date computer systems. As part of the planned build up of staff we are seeking a graduate with up to 3 years computing experience to join our Information Systems Department. This is responsible for establishing a complete range of computing facilities to the plant from manufacturing information through plant maintenance to financial and electronic office systems. Initial role will be in the manufacturing information area with later opportunities to move to other parts of the company as the project progresses. Early responsibility will be given to work closely with users to meet their computing requirements. The Department uses primarily an IBM 4341 and a Data General MV8000 computer. The IBM system is based on a powerful relational data base management language. Other systems are available through the company network. Candidates should be in their mid twenties. Training relative to previous experience will be provided. It would be an advantage for candidates to have a chemical engineering or computing science background, but opportunities are by no means restricted to individuals with this experience.

Systems Programmer

We are also seeking a systems programmer to take responsibility for the operating system on the IBM 4341 and its relational data base management system. Primary responsibilities will include the start up of this system and the provision of consultancy services to the company's plant at Fawley, Southampton, and two other sites in Europe. In addition the successful applicant will take some responsibilities for the Data General System and for commissioning and maintaining interfaces in a multi vendor environment. Candidates should be in their mid twenties, ideally graduates with experience in a systems programmer role of IBM's VM operating system in a database applications environment. However, consideration will be given to those candidates who have experience working with other operating systems.

Candidates can expect a competitive salary and benefits package which includes a relocation allowance where applicable.

Interested parties, male or female, should telephone 0592 262826 or write for an application form and job description to:

**ITT COMMERCIAL
CABLE COMPANY**

**SOFTWARE
ENGINEERS**

£10-18,000

Over a century ago the Commercial Cable Company opened the first transatlantic cable. Today, they form part of the ITT Communications Operations Group, a worldwide network providing a variety of telecommunications services. As the company continues to expand so will their teams of dedicated software engineers. Applications are now invited from computing professionals with any of the following experience to work on development projects.

- * PLMMS, C, Assembler
- * BASIC, VAX
- * Message Switching, Real Time Operating Systems
- * Communications Protocols, Device Handlers

In return we offer competitive salaries and excellent conditions of employment.

LOCATION: CITY

JAS40/3

**SOFTWARE
ANALYSTS**

£10-18,000

Our client is a world leading manufacturer of 32-bit minicomputers. The support team plays a vital role in the increasing demand for the company's products. Vacancies exist for Software Analysts to expand the team responsible for UK and Northern Europe software support. Experience is required in two areas:

Scientific, Technical and Real Time - applicants should have four to five years' experience in a scientific, industrial or real time environment and be fully conversant with operating systems and communication software; scientific high level languages and/or assembler.

UNIX and C - applicants should have in-depth experience of UNIX and C and will be involved in a challenging role of pre- and post-sales support of UNIX and its associated products.

We offer excellent salaries, company cars and a range of benefits normally associated with an organisation of our standing.

TRAINERS to £14,000 + OVERSEAS TRAVEL
As part of their expansion programme Langton require individuals with experience of training in publishing or software products preferably within an IBM or DEC environment. Reporting to the Training Manager you will be responsible for training customers in a variety of software products. The positions will require travel in Europe and potentially North America therefore foreign languages will be advantageous.

TECHNICAL SUPPORT ANALYST to £14,000 + OVERSEAS TRAVEL
Duties include installation and support of electronic publishing software products as well as trouble shooting on customer sites. There will be some travel in Europe and potentially North America. It is envisaged that opportunities will be created for the right person to eventually move into systems programming. Eighteen months development or support experience in an IBM VM or DEC VAX environment is essential.

TECHNICAL SUPPORT PROGRAMMER to £14,000
Responsibilities cover enhancing and maintaining software products including converting software to run on different computers and building a software tools environment for text and graphics processing. You should have two years experience in development or maintenance with a liking for thoroughness and the solving of complex problems. An understanding of IBM VM or DEC VAX Fortran is essential.

CUSTOMER SUPPORT ANALYSTS to £12,000
These are key positions reporting to the Product Support Manager. Responsibilities include supporting customers using electronic publishing software, pre sales and post sales support, manning of a hot line enquiry service, and setting up and running of demonstrations. Ideally you will have 2 years plus software development or support experience with a knowledge of either IBM or DEC. An understanding of the Xerox 8700 Laser printer or facsimile systems would be an advantage.

For an informal discussion regarding these opportunities please telephone Miles Richards on 01-938 1804 (24 hours) or 01-847 2385 (7pm-9pm).

RPG III Join the High Flyers in Shropshire

We are a highly respected market leader in the consumer goods sector with a reputation for quality products that are enjoyed by a wide customer base. These products, together with innovative press and TV advertising, have elevated us to a very strong position within world markets and further growth is envisaged in 1984.

Within the next few months, we will be relocating our IBM System 38 facility from the City of London to Shropshire and we therefore now wish to recruit several experienced personnel with the knowledge and flair to make this move as smooth and efficient as possible and to contribute to our future success.

Programmer c £9,500

Our first requirement is for a Programmer, probably with at least eighteen months experience on IBM GSD facilities and with an in-depth knowledge of RPG II or RPG III.

Initial involvement will be on order entry and distribution systems, but you can expect exposure both on development and maintenance in a variety of applications.

Operators/Programmers c £8,500

We also wish to recruit two young Operators with some experience of IBM RPG programming who are keen to develop their skills in a progressive environment. After initial training in London, the successful Candidates will be given early exposure to a number of applications.

The excellent remuneration packages include four weeks annual leave, pension, life assurance cover and private medical insurance. Generous relocation expenses will be paid where necessary. These, combined with the very affordable housing and fine quality of life you can expect in Shropshire, make this an opportunity not to be missed.

To arrange a prompt and confidential interview, please contact our Advising Consultant, **Jim Mitchell** on 021-236 3781 (24 hour answering service) or on 021-427 2291 (Evenings and Weekends until 9.00 pm).

Technical, Sales & Management Appointments

FOR
Specialist Computer Recruitment Ltd
35-37 Great Charles Street, Queensway, Birmingham B3 3JY 021-236 3781
Birmingham • London • Manchester • Brussels • Amsterdam

Shift Leader

£3,033-£3,999 plus shift allowance

Computer Operator

£3,798-£8,154 plus shift allowance

READING

The Reading Computer Centre contains 2 x ICL 2966s, one operating under CME (G3/VME), the other under VME, and 3 Prime minicomputers. One 2966 will be upgraded to a dual 2988 in October for the new customer accounting system, involving a network of several hundred terminals.

Applicants for Shift Leader should have extensive operating experience in a large VME installation, including several years at a supervisory level.

Applicants for Computer Operator should have at least 18 months' operating experience in a VME installation.

Knowledge of Prime would be an advantage, but is not essential as full training will be given. A single shift system is currently in operation which will be extended to an early/late shift system later this year, for which an allowance will be paid.

You will be placed on the salary scale according to experience. Benefits include generous holidays, a staff canteen and good social facilities.

For more information and an application form, contact the Regional Manager, Computing and Information Services, Nugent House, Varnam Road, Reading RG1 8DB

UNIX UNITE!

London or Berks £10-14K + Car
The interest in UNIX is accelerating and represents YOUR CAREER GUARANTEE - perhaps for a decade. Various proliferate, and so do opportunities - technical and commercial applications, system building, porting, support, development, etc. and there are dangers in specialising too early.
Our clients are the recognised focal point for all UNIX topics and thus offer two unique benefits:
1. A wide range of activities in which to build your future career.
2. Stimulus, recognition, feedback from other UNIX enthusiasts and experts.
Our knowledge of the UNIX market place is comprehensive. Ring Allen Sanders today, to discuss your career objectives. Ref. CA335. (17401)

cd executive (kingston) ltd
53 Eden Street, Kingston-Upon-Thames, Surrey, Tel: 01-549 6441 (24 hrs)

SENIOR PROGRAMMER c £11,000

We are a small, fast growing Business Systems Company providing, at present, predominantly consultancy services to a wide range of (mainly international) customers. The company is experiencing increasing pressure to provide bespoke software and to develop its own package software for clearly identified markets. Extensive use is made of a range of Nixdorf hardware and software.
Applicants should possess sound programming skills, preferably in BASIC and COBOL (other languages will be considered). Systems experience in a business environment is preferable and the work is likely to require good communications skills.
The company can, in return, offer you:
* A stimulating and pleasant working environment
* A range of bespoke and package software projects
* The opportunity for career development which only an exciting, fast growing company can offer.

Please write to:
Peter Davidson, Managing Director, PACT, 17 Lyons Crescent, Tonbridge, Kent TN9 1EX. Telephone: 0732 388011

PACT (17331)

ANALYST/PROGRAMMER MINI/MICRO COMPUTERS

£9K-£12½K

WEST COUNTRY

Application development and support for systems supplied to the Typesetting/Printing industry. We employ a small group of talented software people and now need to expand this team to cope with a growing order book. Experience of mini or micro assembler software a must with a minimum of three years' experience in computing.

We are currently committed to work in the following areas:

- * Text processing
- * Typesetting
- * Graphics
- * Mathematical formulae

Interest has now established itself as a market leader within the Printing industry - you could play a major part in our continuing success.

If you have the talent and self-reliance we can offer a lively, stimulating environment with plenty of scope for a variety of roles.

Please contact Wyn Thomas on 0761 232806 or write to him with full c.v. to Interest Computer Systems (UK) Limited, New Rock, Chilcompton, Bath BA3 4JE. (17430)

WORLDWIDE COMMUNICATIONS SYSTEMS

Project Managers

£16,500-£18,500 + car

LONDON BASED

Our client, with development headquarters in London, was established more than a decade ago and is currently a market leader in the Financial, Banking and Trading areas.

The Company are looking for Project Managers for their Communications Development Group to enhance their existing highly successful operations and, at the same time, establish a new generation of software to service its worldwide client base through its Operating Companies in the USA, Far East, Middle East and Europe.

The successful applicants may be drawn from a wide range of backgrounds, but must have realtime or online development experience in a communications environment, be highly motivated individuals and able to work on their own initiative. They should also be willing to travel, both in the UK and overseas.

Systems are presently based on DEC PDP11 and VAX hardware but future strategy is to make the software portable and therefore implementable on other CPUs.

Products include a range of International Banking Systems with a sophisticated interface package linking into the S.W.I.F.T. and other International Networks - they also have a store-and-forward message switching system which manages communications over Telex, Telegraph, PSS and Private Line Networks.

This is an ideal opportunity to influence the direction of future products, to grow with an expanding international organisation, and to be responsible for the design and implementation of their next generation of communications developments.

For further information, please contact Jenny Dalrymple-Hay or Ian Murray West on 01-493 2947, from 8am to 10pm Monday to Friday, or weekends Jenny Dalrymple-Hay on Beaconsfield (04946) 4579, quoting REF 5040.

Cobol Programmer £8,000+ p.a.

We are an expanding company using an ICL ME29 computer with numerous ICL DRS mini-computers and require a person with 2-3 years' experience.

The position involves user liaison, the writing of new systems and maintaining of current systems.

Benefits include 22 days holiday and pension scheme.

Please telephone Roger Strong, Computer Manager, on 01-540 1151. (17498)

PCL

A MEMBER OF THE SGB GROUP

TECHNICAL SUPPORT ROLE • To £9,500 + Car + Bonus • West of London

Recognising certain characteristics is something our client, OCR Scandata knows all about. They are market leaders in the development and supply of sophisticated Optical Recognition Equipment which has placed them at the forefront of the UK, European and US markets. Their diverse products range from Hand Held OCR readers to 'State of the Art' full document image capture equipment. The applications utilising these products are equally wide ranging.

The Company is constantly improving the performance of its products and it is within the Software area that you will play an important role in a technical support capacity. This is a responsible and varied position within a team involved in both the development of customised software and also the demonstration and implementation of the company's products. The technical environment includes DEC, IBM and Perkin-Elmer hardware and a diverse range of mini/micro systems supporting the products.

You'll be working with a variety of high and low level languages, with the latest developments taking place in 'C' and MS-DOS.

Ideally you should have experience of around 2 years programming in a mini/micro environment. Applications from candidates with the ambition to move into this field are also invited. If you have the technical ability and the confidence to communicate effectively, this is a company that will maximise your talents and stimulate you both personally and professionally.

And should you need further convincing; the rewards include a salary of up to £9.5K + car + bonus, private health scheme, pension scheme and life assurance.

If you can identify with such technical scope and career prospects call Hugh Macer up to 7pm Weekdays on 01-734 9723. Evenings and weekends 01-881 2788.

Programmer/Analysts • An exercise in character recognition

CTR

Computer Technology Recruitment Limited Triumph House, 189 Regent Street, London W1R 7WD.

Analyst/Programmer

c.£10,500

Our client is a manufacturing company within the light engineering industry, part of an international group which is itself a public company. Their very well-established DP department (small, friendly and closely-knit) already has a good reputation within the company, having successfully implemented both major and minor projects, which include the accounting functions and order-processing. They are currently undertaking Production Control/Inventory Management, which will be both on-line and Database. The environment is:

- NCR 8555 • VRX COBOL
- TRANPRO • TOTAL

For this position we are looking for 2-3 years' experience gained in a similar VRX COBOL environment. You will be responsible for your own project, or part of a project, from start to finish, including specification writing and user liaison. Implementation skills are particularly important.

Richmond-upon-Thames

Software Engineers Who've fallen on hard times...

Cord Designs Limited

ZEUS HERMES DIVISION

We don't mean those with holes in their clothes, hunger pangs and bare feet - if they exist that is. No, the people we want to talk to are the ones who have been suffering from lack of scope, poor facilities and project boredom. You're ambitious Software Engineers, and we have your greatest incentive.

As a major international systems consultancy, Cord can offer you everything that reflects professional excellence. Our specialisation in the high technology areas of computing means that our expertise is in demand for short term consultancy up to million pound projects. We are dynamic, profitable and developing fast. What's more, we understand exactly what makes someone like you tick.

Consider a diverse range of applications embracing communications, real time, and defence, each of which will fully stretch your capabilities. You'll work at the forefront of technical software design, using the finest available facilities and making a tangible contribution at every stage from concept through to completion. What's more, you'll be working towards implementation every time.

No one could extend your experience so quickly, and nowhere will you find better prospects. You'll be continually challenged by our flexibility, working both inhouse and at client locations, with well defined responsibilities.

Matching our pace means being bright, presentable and outgoing. Aged 25-35 you're probably a graduate, although our emphasis is primarily on experience, which must have been gained over at least 3 years in a relevant scientific or technical background, where you will have become familiar with technical and real time languages such as Assembler, Coral or Pascal. All this will bring you career development fast, with early management responsibility.

Salary wise, we're talking up to £15,000 depending on your ability. And there are many other benefits such as first class training, free personal PPP insurance, a pension scheme, expenses and relocation assistance if necessary.

So phone Derek Pearson on Staines (0784) 83911 during business hours or on Bromley (0880) 50700 evenings and weekends.

Alternatively, if you prefer, write to him at Cord Designs Limited, Cord House, The Causeway, Staines, Middlesex TW18 3AX.

SPL SPL SPL SPL SPL International

ADVANCED INFORMATION TECHNOLOGY AND KNOWLEDGE ENGINEERING OPPORTUNITIES TO JOIN ONE OF THE UK'S LEADING GROUPS. SALARIES TO £18K.

SPL International's Research Centre is the Company's corporate focus for advanced information technology. The Centre's work involves the design, development and marketing of software tools and technology for use within the Company and for its clients in the UK, Europe and the rest of the world. During 1984 the Centre will be making investments in new Knowledge Engineering tools and advanced knowledge-based application.

In support of this programme applications are sought from individuals who have experience of and can demonstrate achievement in one or more of:

KNOWLEDGE ENGINEERING

Consultancy, design or implementation skills in K.E. including the development of at least one significant application preferably in sensor data processing or with a large MMI component. For senior positions a broad group of KBS techniques is essential.

SOFTWARE TECHNOLOGY

Design and implementation of advanced interactive software environments including object oriented, applicative, list processing and logic programming languages, relational database and expert system shells.

EMBEDDED SYSTEMS

Consultancy or project management skills in embedded applications including plant monitoring and control, EM and acoustic sensor data processing, tactical simulation and military or related command and control systems.

The Research Centre is located in an attractive part of the UK at Abingdon, near Oxford. It maintains strong links with other SPL Divisions, both in the UK and continental Europe. Extensive computing facilities are installed including a powerful VAX configuration, PDP service machines and a wide variety of micros. Software environments include POPLOG, PROLOG, LISP, ADA, SAGE, ALGOL68, PASCAL and RTL/2.

To applicants with the right experience, motivation and innovative skills these opportunities offer:

- ★ Competitive salary with relocation as appropriate
- ★ Excellent career prospects in a growing organisation
- ★ Scope for innovation at the front of current thinking
- ★ Visibility and recognition of individual effort in small teams.

Write with c.v. or call: Charyl Carter, SPL International Research Centre, The Charter, Abingdon, Oxon. (Tel: 0235 24112).

Systems Analyst

Business Technology

Circa £10,000 + Relocation

Cheshire

The Candidate

Ideally will be a graduate with at least two years systems analysis experience. It would be particularly beneficial for candidates to have had specific experience of one or more of the areas outlined above. Good communication skills and the ability to operate independently or as part of a project team are essential personal characteristics.

The Client

Is a highly successful and profitable company operating in the forefront of technology. Located in an attractive part of Cheshire, it is well serviced with motorway, road and rail links.

The Position

Is within a small Business Technology section working in the field of office systems encompassing such areas as information storage and retrieval, text processing, personal computing and the associated equipment and software.

For further details please ring Tony Roberts on 0270 627206 during the day or 0270 624086 evenings and weekends. Or write to him at the address below.

"You were in the running for the job, but you didn't show the same form as the winner."

To win the battle for jobs you've got to have the right form.

The Lansdowne profile form. It's like no other application form - it's so brief and easy to fill in. But it tells employers just what they need to know to pick you out for a job offer.

In just 3 days, one Lansdowne job-seeker was approached by 27 employers.

We've spent 12 years introducing employers to job-seekers. At the same time training and shaping the information we ask for into the lean fighting form employers welcome and use.

Our computer instantly memorises your form and compares it with the vast number of vacancies we've been asked to help fill in 283 different job categories. And we scan the Register every day to see which of the latest incoming vacancies might suit you.

We need to do this because the Lansdowne team is talking to employers about job vacancies day in, day out by phone, mail and face to face. So new vacancies are constantly being added to Lansdowne Appointments Register.

We could have one in there for you right now. And it costs you nothing to find out.

NETWORKING SPECIALIST

West London based c£12,000

The expanding Telecommunications division of a major International British Group, with a turnover in excess of £4 billion, provides information systems support to a wide variety of users throughout the UK. To ensure that the three major networks (voice, statistical multiplexors and SNA) continue to provide the excellent communications required by the group, they now need to recruit a networking/communications specialist.

Your responsibilities will cover the installation of all new equipment and liaison with end-suppliers. In addition you will work with the technical support team to identify user-orientated problem areas, which will obviously involve some travel - for which a car will be provided where necessary.

To move into this fast-moving environment - where change is the norm rather than the exception - you should be a self-motivated network specialist with a background in diagnostics. The team is young and sociable, the work is hard - the rewards are excellent.

Ring Jayne Longmore on 01-948 5922, Now, for an immediate interview or write to her at KPG.

Software Engineers**

**Berkshire
£8k-15k**

Communications Designer

BERKSHIRE

Up to £14,000

A major manufacturer of minicomputers is seeking Programmer/Designers to develop communications systems. The project involves support, design and development of X25 Level 2 software and LAN Link level software for Unix System III-based workstation.

Candidates should have practical experience of X25/HDLC or similar protocols. Additional experience of Pascal, C, Unix is highly desirable.

Successful candidates will gain valuable experience in the implementation of the lower four layers of the OSI model including Network definition and control. CW 2/4

Florida

NETWORKS/X25

Up to \$50k

One of the world's most innovative producers of communications and information systems is currently seeking to recruit additional Comms experts to work at their laboratories in Florida.

The company is looking for experts with two main areas of expertise: Data communications specialists, requiring highly qualified candidates with experience of X25 and related protocols, package switching and network diagnostic equipment experience.

The second area calls for Network software specialists; at least two years' experience of VTAM, BTAM and NCP. Additional experience of a COMTEN or IBM 3705 hardware is desirable.

In addition to the technical skills to be gained, the company provides a comprehensive benefits and relocation package. CW 2/10

Communications Manager

BERKSHIRE

Up to £18,000 + bonus + car

The Computer and Communications Manufacturers Business Section of a major systems house have created a new Account manager's position to assist in the development and management of this important business area. This position calls for the combined ability of (A) selling/marketing the company's services and (B) a solid systems development background with more recent experience of communications systems, e.g. IBM Comms, ICL Comms, X25 and LANs. Finally, candidates should possess project management experience preferably with some financial and contractual responsibilities. This position offers the successful candidate the platform to assume further business responsibility in the future. CW 2/3

Coral/Mascot

LONDON/SURREY

Up to £15,000

A leading consultancy commanding large contracts with the MOD require professional Programmers and Software Designers to work on Realtime systems. Candidates should have a degree plus experience of Coral and preferably Mascot. Experience of Context and VAX machines would be helpful. Successful candidates may look forward to enhancing their careers within an organisation proud of its reputation for professionalism and career development. CW 2/5

C³ Development

LONDON/HOME COUNTIES

£16K + Package

One of Britain's leading information systems contractors is seeking consultants for research and development on major C³ projects. Candidates should have a numerate science degree and have at least five years' experience in Defence Communications, working on large projects like Ptarmigan, BATES, etc. Candidates should have a thorough understanding of communications systems, analysis and design. SENIOR SALES EXECUTIVES

NOBODY DOES IT BETTER!

In fact, only one other manufacturer does it at all!

Our client manufactures a computer system that is so predominant and successful that to mention the particular market place would instantly reveal the product concerned. Yet it is only one of a range of minicomputers with a system price ranging from £25,000 to £500,000. The company has a considerable reputation for product excellence and its ability to sustain a growth rate of 30% per annum is in no small way due to the through-range compatibility, as well as being one of the very few computer manufacturers able to provide commercial and industrial turnkey systems without necessarily having to rely on external systems houses.

Last year the company once again enjoyed considerable success with the top echelon of the sales force earning in excess of £50,000, due not only to effective selling, but also aided by a high level of pre- and post-sales support and low staff turnover - the hallmark of a happy company!

This continuing expansion has consequently created a demand for additional sales people in

LONDON & HOME COUNTIES

MIDLANDS & NORTH

We are therefore seeking a couple of sales people from a hardware systems or computer services background, who really understand industrial and commercial applications. This is an opportunity that will particularly appeal to talented sales people who feel that their potential is not really being achieved.

Our client offers a very attractive compensation plan with low sales targets and high earnings with a company car and guaranteed minimum first year earnings of around £20,000. Yet, this guarantee is not set against new business commission earnings!

Please contact Alasdair Scott, Lindsay Howie, or Mike Linford, quoting reference SSB/014.

SALES BIT

Quality of Management - 80

Knock your closest competition at your peril

"NEVER knock your competitors" is one of the oldest by-words of selling, but perhaps one that is misleading. However, there can be no doubt that the process is a minefield that should be avoided.

There is a tempting suggestion that belittling others automatically implies the enhancement of oneself.

It is unlikely that, in declaring the inadequacies of someone else a critic should wish to be considered as bad, or even worse.

It is implied that the accuser is above the failings he is pointing out. The stance is one of superiority.

That is dangerous ground where only facts can prevail, opinion is worthless, and relevance is an essential qualification.

However, I would not suggest that highlighting the weaknesses of competitors within the confines of the sales negotiation is an unacceptable process.

On the contrary, it is essential for every salesman to have a thorough knowledge of his competitors in terms of product shortfall, product advantages and self-cancelling benefits.

Armed with this information it is his responsibility to make the buyer aware of the inadequacies of competitors by emphasising exclusive advantages rather than competitive failings.

by highlighting our competitors' situation, not mentioning it at all, or even playing it down; and which approach will do most for enhancing the relationship between the buyer and myself?

It is not uncommon for a buyer to lose faith in an entire marketplace due to the failure of a single supplier, because he sus-

"How is the confidence of the buyer being affected by the problems of another supplier?"

pects the problem is fundamental to the nature of the product. For sales people to feed such possible fears is a dereliction of duty and a serious breach of professional ethics.

People always suspect the motives of those who are anxious to decry the failings of others - the "holier-than-thou" syndrome. Even the most generous of interpretations - anxiety, misconception, ignorance and the like - are equally unfattering, but the conclusions of the more cynical buyer - envy, malice, perversity, stupidity, opportunism - could destroy the salesman's chances forever!

I hope I have said sufficient to distract you from the possible pursuit of abusing competitors. If I have laboured the point I do not apologise.

Indeed, I have even more to say about it in Chapter VII of my recent book, for I regard it as an important issue.

Truth is no excuse either. Just because you know without question that you are stating a fact does not make it more acceptable to the buyer or increase your stature - quite the contrary.

People always suspect the motives of those who are anxious to decry the failings of others - the "holier-than-thou" syndrome

Is there anything more repugnant than someone who knows he is irrefutably right and damn the consequences? Being right does not give the right.

"All About Selling", published by McGraw Hill, £9.95. Available from Trader Enterprises, c/o Sales and Marketing Services, 29 Oxford Street, London, W1.

Alan Williams

PUZZLE ANSWER

If n equals the mystery base, then $n^2 + 2n^2 + 3n + 4 = 7,642$; or $n^2 + 2n^2 + 3n - 7,638 = 0$. From this equation we can say that n must be one of the factors of 7,638 (which are 2, 3, 19 and 67).

Clearly 19 is the most likely candidate, and further calculation confirms this to be the base involved.
